**Description**

Pericom Semiconductor's PI6C10806B is a low skew six output crystal oscillator driver. Crystal oscillator input range is from 10MHz to 50MHz. If XTAL\_IN is driven with a signal source, then the input frequency can be as high as 100MHz. PI6C10806B, the outputs are configured into 2 groups: a five output and a single output; each with independent output enable.

PI6C10806B has a wide range of operating voltages: 1.8V, 2.5V, and 3.3V. This feature paired with the low output-to-output and part-to-part skew makes the device ideal for low voltage, low power, high frequency single ended applications; such as networking

## Application Notes

### Crystal circuit connection

The following diagram shows PI6C10806B crystal circuit connection with a parallel crystal. For the  $C_L=18\text{pF}$  crystal, it is suggested to use  $C1=15\text{pF}$ ,  $C2=15\text{pF}$ .  $C1$  and  $C2$  can be adjusted to fine tune to the target ppm of crystal oscillator according to different board layouts.  $R1$  is not recommended.
