RFSW6024

Absorptive High Isolation SPDT Switch 5MHz to 6000MHz

The RFSW6024 is a Silicon on Insulator (SOI) single-pole, double throw (SPDT) switch designed for use in cellular, 3G, LTE, and other high performance communications systems. It offers a high isolation symmetric topology with excellent linearity and power handling capability. No blocking caps are necessary on the RF ports. The design is non-reflective such that RF ports 1 and 2 are terminated in the off-state. The enable pin allows for a terminated "all-off state". The RFSW6024 is 1.8V positive logic compatible.

Notes:

1. Assuming load VSWR < 3:1, for high VSWR loads this value reduces to 30.5dBm
2. Applies to resistive loss from insertion loss not including mismatch loss
3. Total power in both loads being driving simultaneously
4. For < 300MHz, it is recommended to operate at least 4dB below 1dB compression point
