

Agilent ABA-32563

2.5 GHz Broadband Silicon RFIC Amplifier

Data Sheet

Description

Agilent's ABA-32563 is an economical, easy-to-use, internally 50Ω matched, silicon monolithic broadband amplifier that offers excellent gain and broadband response from DC to 2.5 GHz. Packaged in an ultra-miniature SOT-363 package, it requires half the board space of a SOT-143 package.

At 2 GHz, the ABA-32563 offers a small-signal gain of 19 dB, output P1dB of 8.4 dBm and 19.5 dBm output third order intercept point. It is suitable for use as wideband applications. They are designed for low cost gain blocks in cellular applications, DBS tuners, LNB and other wireless communication systems.

ABA-32563 is fabricated using Agilent's HP25 silicon bipolar process, which employs a double-diffused single polysilicon process with self-aligned submicron emitter geometry. The process is capable of simultaneous high f_T and high NPN breakdown (25 GHz f_T at 6V BVCEO). The process utilizes industry standard device oxide isolation technologies and submicron aluminum multilayer interconnect to achieve superior performance, high uniformity, and proven reliability.
