### CAUTION

Although this device is designed to be as robust as possible, ESD (Electrostatic Discharge) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions must be employed at all times.

## EVALUATION CIRCUIT

Note: It is recommended to connect the pin directly to the ground, or not to connect the pin to anything.

**Remarks** C1 : 0.5 to 2.0 GHz      56 pF  
                   : 2.0 to 6.0 GHz      8 pF

The application circuits and their parameters are for reference only and are not intended for use in actual design-ins.

## APPLICATION INFORMATION

- $C_B$  are DC blocking capacitors external to the device.  
 A value of 8 pF is sufficient for operation from 2 GHz to 6 GHz bands.  
 The value may be tailored to provide specific electrical responses.
- The RF ground connections should be kept as short as possible and connected to directly to a good RF ground for best performance.
- $L_{ESD}$  provides a means to increase the ESD protection on a specific RF port, typically the port attached to the antenna.

**TYPICAL CHARACTERISTICS**

( $V_{cont(H)} = 3.0\text{ V}$ ,  $V_{cont(L)} = 0\text{ V}$ ,  $Z_O = 50\ \Omega$ , DC blocking capacitors = 8 pF, unless otherwise specified)
