

Quad-SPDT, Clickless Audio Switches with Negative Signal Handling

General Description

The MAX4910/MAX4911/MAX4912 quad, single-pole/double-throw (SPDT), clickless audio switches feature negative signal capability that allows signals as low as $V_{CC}-5.5V$ to pass through without distortion. These analog switches have a low on-resistance, low supply current, and operate from a single +1.8V to +5.5V supply.

The MAX4910/MAX4911/MAX4912 have internal shunt resistors that automatically discharge the capacitance at the normally open (NO) and normally closed (NC) terminals when they are not connected. The MAX4910/MAX4911 have shunt resistors on all NO and NC terminals and the MAX4912 has shunt resistors on all NO, NC1, and NC3 terminals. These shunt resistors reduce click-and-pop sounds that occur when switching audio signals between precharged points. A break-before-make feature further reduces popping.

The MAX4910/MAX4912 control the switches in pairs with two control bits CB1 and CB2. The MAX4911 has one control bit to switch all four switches and an enable pin \overline{EN} to put the switches in a high-impedance mode. The MAX4912 has two terminals without shunt resistors for switching applications that do not require pre-discharge switching.

The MAX4910/MAX4911/MAX4912 are available in a tiny 16-pin TQFN-EP (3mm x 3mm) package and operate over the $-40^{\circ}C$ to $+85^{\circ}C$ extended temperature range.

Applications

Cell Phones
PDAs and Handheld Devices
Notebook Computers
MP3 Players

Features

- ◆ Distortion-Free Negative Signal Throughput Down to $V_{CC} - 5.5V$
- ◆ Internal Shunt Resistors Reduce Click-and-Pop Sounds
- ◆ High PSRR Reduces Supply Noise
- ◆ Low On-Resistance (0.37Ω)
- ◆ 0.1Ω Channel-to-Channel Matching
- ◆ 0.35Ω On-Resistance Flatness
- ◆ +1.8V to +5.5V Single-Supply Voltage
- ◆ -80dB Crosstalk (20kHz)
- ◆ -90dB Off-Isolation (20kHz)
- ◆ 0.05% Total Harmonic Distortion
- ◆ Enable Control (MAX4911)
- ◆ 10nA Leakage Current
- ◆ 150nA Supply Current

Typical Operating Circuit appears at end of data sheet.

Pin Configurations

Quad-SPDT, Clickless Audio Switches with Negative Signal Handling

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

V _{CC} , CB ₋ , $\overline{\text{EN}}$	-0.3V to +6.0V
COM ₋ , NC ₋ , NO ₋	(V _{CC} - 6V) to (V _{CC} + 0.3V)
Continuous Current NO ₋ , NC ₋ , COM ₋	±300mA
Peak Current NO ₋ , NC ₋ , COM ₋ (pulsed at 1ms, 50% duty cycle)	±400mA
Peak Current NO ₋ , NC ₋ , COM ₋ (pulsed at 1ms, 10% duty cycle)	±500mA

Continuous Power Dissipation (T _A = +70°C)	
16-Pin TQFN, Single-Layer Board	
(derate 15.6mW/°C above +70°C)	1250mW
16-Pin TQFN, Multilayer Board	
(derate 20.8mW/°C above +70°C)	1667mW
Operating Temperature Range	-40°C to +85°C
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{CC} = +2.7V to +5.5V, T_A = -40°C to +85°C, $\overline{\text{EN}}$ = low (MAX4911 only), unless otherwise noted. Typical values are at V_{CC} = +3.0V, T_A = +25°C.) (Note 1)

DIGITAL INPUTS (CB_, \overline{EN})							
Input Logic High	V _{IH}		1.4			V	
Input Logic Low	V _{IL}			0.5		V	
Input Leakage Current	I _{CB} , I _{\overline{EN}}	$V_{CB_} = V_{\overline{EN}} = 0V$ or V_{CC}	-1		+1	μA	

Note 1: All parameters are production tested at $T_A = +85^{\circ}C$ and guaranteed by design over the specified temperature range.

Note 2: Signals on COM_, NO_, or NC_ exceeding V_{CC} are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Note 3: Guaranteed by design; not production tested.

Note 4: $\Delta R_{ON} = R_{ON(MAX)} - R_{ON(MIN)}$.

Note 5: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal ranges.

Note 6: Off-isolation = $20\log_{10} [V_{COM_} / V_{NO_}]$, $V_{COM_}$ = output, $V_{NO_}$ = input to off switch.

15	15	NO1	Analog Switch 1—Normally Open Terminal
16	16	COM1	Analog Switch 1—Common Terminal
—	—	EP	Exposed Pad. Connect to Ground

Detailed Description

The MAX4910/MAX4911/MAX4912 quad SPDT audio switches are low on-resistance, low supply current, high power-supply rejection ratio (PSRR) devices that operate from a +1.8V to +5.5V single supply. These devices feature a negative signal capability that allows signals below GND to pass through without distortion and break-before-make switching.

The MAX4910/MAX4912 have two digital control inputs CB1 and CB2 where each bit controls a pair of switches (see Table 1). The MAX4911 has an active-low enable \overline{EN} and a digital control bit CB. Driving \overline{EN} low takes the switches out of high impedance and CB controls all four switches (see Table 2). The MAX4910/MAX4911 have shunt resistors on all their NO and NC terminals to suppress click-and-pop sounds that may occur from switching to a precharged terminal. The MAX4912 does not have click-and-pop suppression resistors on NC2 and NC4 for applications that do not require predischarge switching.

Table 1. MAX4910/MAX4912 Truth Tables

CB1	NC1	NO1	NC3	NO3
0	On	Off	On	Off
1	Off	On	Off	On
CB2	NC2	NO2	NC4	NO4
0	On	Off	On	Off
1	Off	On	Off	On

Table 2. MAX4911 Truth Table

\overline{EN}	CB	NC ₋	NO ₋
1	X	Off	Off
0	1	Off	On
0	0	On	Off

X = Don't care.

Quad-SPDT, Clickless Audio Switches with Negative Signal Handling

Functional Diagrams

Applications Information

Digital Control Inputs

The MAX4910/MAX4911/MAX4912 logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply, CB1, CB2, CB, and EN can be driven

low to GND and high to +5.5V, allowing for mixed logic levels in a system. Driving CB, CB1, CB2, and EN rail-to-rail minimizes power consumption. For a +3.3V supply voltage, the logic thresholds are +0.5V (low) and +1.4V (high).

Quad-SPDT, Clickless Audio Switches with Negative Signal Handling

MAX4910/MAX4911/MAX4912

Figure 1. Typical Application Circuit

Analog Signal Levels

The MAX4910/MAX4911/MAX4912 on-resistance is channel dependant. Channels 1 and 3 have an on-resistance of 0.37Ω (typ), and channels 2 and 4 have an on-resistance of 0.72Ω (typ). The on-resistance flatness is guaranteed over temperature and shows minimal variation over the entire voltage supply range (see the *Typical Operating Characteristics*). The on-resistance flatness and low-leakage features make it ideal for bidirectional operation. The switches are bidirectional, so the NO_, NC_, and COM_ pins can be either inputs or outputs.

These devices pass signals as low as $V_{CC} - 5.5V$, including signals below ground with minimal distortion.

Click-and-Pop Suppression

The MAX4910/MAX4911 have a $3.8k\Omega$ (typ) shunt resistor on all their NO and NC terminals to automatically discharge any capacitance when they are not connected to COM. The MAX4912 has shunt resistors on all NO, NC1, and NC3 terminals. The shunt resistors reduce audible click-and-pop sounds that occur when switching between audio sources.

Audible clicks and pops are caused when a step DC voltage is switched into the speaker. The DC step tran-

sients can be reduced by automatically discharging the side that is not connected to the COM terminal, reducing any residual DC voltage and reducing clicks and pops.

Break-Before-Make Switching

The MAX4910/MAX4911/MAX4912 feature break-before-make switching, which is configured to break (open) the first set of contacts before engaging (closing) the new contacts. This prevents the momentary connection of the old and new signal paths to the output, reducing click-and-pop sounds.

Power-Supply Sequencing and Overvoltage Protection

Caution: Do not exceed the Absolute Maximum Ratings since stresses beyond the listed ratings may cause permanent damage to the device.

Proper power-supply sequencing is recommended for all CMOS devices. Improper supply sequencing can force the switch into latchup causing it to draw excessive supply current. The only way out of latchup is to recycle the power and properly reapply it. Connect all ground pins first, then apply power to V_{CC} , and finally apply signals to NO_, NC_, and COM_. Follow the reverse order upon power-down.

NOTES:

- DIMENSIONING & TOLERANCING CONFORM TO ASME Y14.5M-1994.
- ALL DIMENSIONS ARE IN MILLIMETERS; ANGLES ARE IN DEGREES.
- N IS THE TOTAL NUMBER OF TERMINALS.
- THE TERMINAL #1 IDENTIFIER AND TERMINAL NUMBERING CONVENTION SHALL CONFORM TO JEDEC 95-1 SPP-012. DETAILS OF TERMINAL #1 IDENTIFIER ARE OPTIONAL, BUT MUST BE LOCATED WITHIN THE ZONE INDICATED. THE TERMINAL #1 IDENTIFIER MAY BE EITHER A MOLD OR MARKED FEATURE.
- DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.20 mm AND 0.25 mm FROM TERMINAL TIP.
- ND AND NE REFER TO THE NUMBER OF TERMINALS ON EACH D AND E SIDE RESPECTIVELY.
- DEPOPULATION IS POSSIBLE IN A SYMMETRICAL FASHION.
- COPLANARITY APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.
- DRAWING CONFORMS TO JEDEC MO220 REVISION C.
- MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.
- NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
