

SLLIMM™-nano small low-loss intelligent molded module IPM, 3 A, 600 V, 3-phase IGBT inverter bridge

Datasheet - production data

Applications

- 3-phase inverters for motor drives
- Dish washers, refrigerator compressors, heating systems, air-conditioning fans, draining and recirculation pumps

Description

This SLLIMM (small low-loss intelligent molded module) nano provides a compact, high performance AC motor drive in a simple, rugged design. It is composed of six MOSFETs and three half-bridge HVICs for gate driving, providing low electromagnetic interference (EMI) characteristics with optimized switching speed. The package is optimized for thermal performance and compactness in built-in motor applications, or other low power applications where assembly space is limited. This IPM includes an operational amplifier, completely uncommitted, and a comparator that can be used to design a fast and efficient protection circuit. SLLIMM™ is a trademark of STMicroelectronics.

Features

- IPM 3 A, 600 V, 3-phase IGBT inverter bridge including control ICs for gate driving and freewheeling diodes
- Optimized for low electromagnetic interference
- $V_{CE(sat)}$ negative temperature coefficient
- 3.3 V, 5 V, 15 V CMOS/TTL input comparators with hysteresis and pull-down/pull-up resistors
- Undervoltage lockout
- Internal bootstrap diode
- Interlocking function
- Smart shutdown function
- Comparator for fault protection against overtemperature and overcurrent
- Op-amp for advanced current sensing
- Optimized pinout for easy board layout

4 Smart shutdown function

The STGIPN3H60 integrates a comparator for fault sensing purposes. The comparator non-inverting input (C_{IN}) can be connected to an external shunt resistor so to implement a simple overcurrent protection function. When the comparator triggers, the device is set in shutdown state and both of its outputs are set to low level to lead the half-bridge to tri-state. In common overcurrent protection architectures, the comparator output is usually connected to the shutdown input through an RC network, to provide a mono-stable circuit, which implements a protection time following to the fault condition. Our smart shutdown architecture allows the output gate driver to immediately turn off in case of overcurrent, the fault signal has a preferential path, which directly switches off the outputs. The time delay between the fault and the output turn-off is no more dependent on the RC values of the external network connected to the shutdown pin. At the same time, the internal logic turns on the open-drain output and holds it on until the shutdown voltage goes below the logic input threshold. Finally the smart shutdown function increases the real disable time without increasing the constant time of the external RC network.

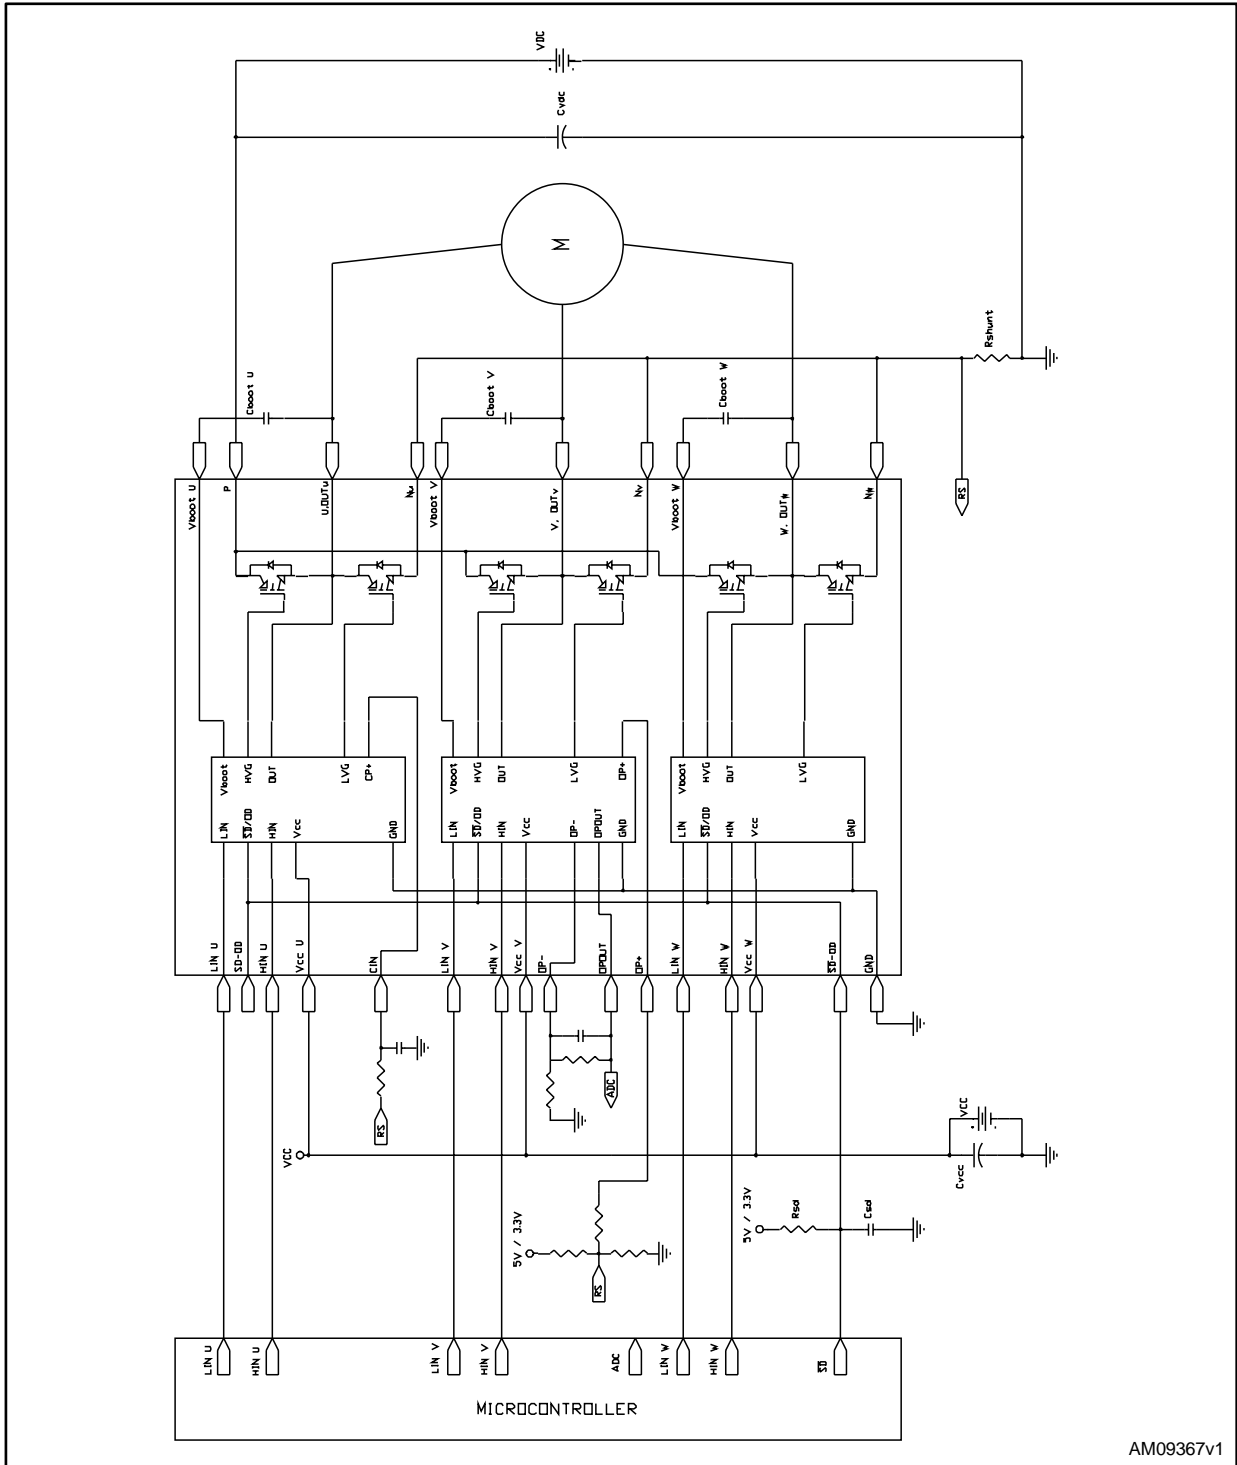

Figure 6: Smart shutdown timing waveforms

Please refer to [Table 13: "Sense comparator characteristics \(VCC = 15 V unless otherwise specified\)"](#) for internal propagation delay time details.

5 Application circuit example

Figure 7: Application circuit example

AM09367v1

Application designers are free to use a different scheme according to the specifications of the device.

5.1 Guidelines

- Input signal HIN is active high logic. A pull-down resistor of 85 kΩ (typ.) is built-in for each high-side input. If an external RC filter is used for noise immunity, attention should be given to the variation of the input signal level.
- Input signal $\overline{\text{LIN}}$ is active low logic. A 720 kΩ (typ.) pull-up resistor, connected to an internal 5 V regulator through a diode, is built-in for each low-side input.
- To avoid input signal oscillation, the wiring of each input should be as short as possible.
- By integrating an application specific type HVIC inside the module, direct coupling to the MCU terminals without an optocoupler is possible.
- Each capacitor should be located as close as possible to pins of IPM.
- Low inductance shunt resistors should be used for phase leg current sensing.
- Electrolytic bus capacitors should be mounted as close to the module bus terminals as possible. Additional high frequency ceramic capacitors mounted close to the module pins improve the performance.
- The $\overline{\text{SD}}$ /OD signal should be pulled up to 5 V / 3.3 V with an external resistor (see [Section 4: "Smart shutdown function"](#) for detailed info).

These guidelines ensure the specifications of the device for application designs. For further details, please refer to the relevant application note AN4043.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
