

General Description

The MAX14980 quad-channel redriver is designed to redrive two full lanes of SAS or SATA signals up to 6.0GT/s (gigatransfers per second) and operates from a single +3.3V supply.

The MAX14980 features independent input equalization and output preemphasis. It enhances signal integrity at the receiver by equalizing the signal at the input and establishing preemphasis at the output of the device. SAS and SATA OOB (out-of-band) signaling is supported using high-speed amplitude detection on the inputs and squelch on the corresponding outputs. Inputs and outputs are all internally 50Ω terminated and must be AC-coupled to the SAS/SATA controller IC and SAS/SATA device.

The MAX14980 is available in a small 42-pin, 3.5mm x 9mm, TQFN package with flow-through traces for ease of layout. This device is specified over the -40°C to +85°C extended operating temperature range.

Applications

- Industrial/Embedded PCs
- Computer on Modules
- Carrier Boards
- Test Equipment
- Rack Server Industrial PCs
- Medical Equipment

Benefits and Features

- High Performance Solution Designed to Overcome Lossy Channels
 - 3dB of Independent (per Channel) Selectable Input EQ and Output Preemphasis
 - Compensates up to 30in of Channel Losses with Deterministic Jitter: 23ps_{P-P} (max); Random Jitter: 1.8ps_{RMS} (max)
 - 8dB (typ) of Return Loss Up to 3.0GHz
- Designed to Reliably Operate in Harsh Environments
 - Industrial Temperature Rated: -40°C to +85°C
 - ±2.5kV Human Body Model (HBM) ESD Protection on All Pins
 - Housed in a Flow-Through (42-Pin, 3.5mm x 9.0mm) TQFN Package or Resistance to Vibration/ Shocks
- Ease of Design and Layout
 - Single 3.3V Operation
 - Internal Input/Output 50Ω Termination Resistors

Ordering Information appears at end of data sheet.

Pin Configuration

Absolute Maximum Ratings

(Voltages referenced to GND.)

V _{CC}	-0.3V to +4.0V
All Other Pins	-0.3V to (V _{CC} + 0.3V)
Continuous Current (PE ₋ , EQ ₋ , MODE ₋).....	±15mA
Peak Current (for 10kHz, 1% duty cycle) (IN ₋ , OUT ₋).....	±100mA

Continuous Power Dissipation (T _A = +70°C) TQFN (derate 35.7mW/°C above +70°C).....	2857mW
Operating Temperature Range.....	-40°C to +85°C
Storage Temperature Range	-55°C to +150°C
Junction Temperature.....	+150°C
Lead Temperature (soldering, 10s)	+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 1)

TQFN

Junction-to-Case Thermal Resistance (θ _{JC}).....	2°C/W	Junction-to-Ambient Thermal Resistance (θ _{JA})	28°C/W
---	-------	---	--------

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

(V_{CC} = +3.0V to +3.6V, C_{COUPLE} = 12nF, R_L = 50Ω, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +3.3V, T_A = +25°C.) (Note 2)

Pin Description

PIN	NAME	FUNCTION
1	MODEB	OOB Threshold Logic Input B. MODEB is internally pulled down.
2, 9, 16, 23, 30, 37	V _{CC}	Positive Supply Voltage Input. Bypass V _{CC} to GND with 2.2μF and 0.01μF capacitors in parallel as close as possible to the device, recommended on each V _{CC} pin.
3, 6, 12, 15, 24, 27, 33, 36	GND	Ground
4	IN1BP	Noninverting Input 1B
5	IN1BM	Inverting Input 1B
7	OUT0BP	Noninverting Output 0B
8	OUT0BM	Inverting Output 0B
10	IN0AP	Noninverting Input 0A
11	IN0AM	Inverting Input 0A
13	OUT1AP	Noninverting Output 1A
14	OUT1AM	Inverting Output 1A
17	ENA	Active-High Enable Input A. Drive ENA low to put A channels in standby mode. Drive ENA high to put A channels in normal operation. ENA is internally pulled down.
18	EQ0A	Channel 0A Input Equalizer Logic Input. EQ0A is internally pulled down.
19	PE0A	Channel 0A Output Preemphasis Logic Input. PE0A is internally pulled down.
20	EQ1A	Channel 1A Input Equalizer Logic Input. EQ1A is internally pulled down.
21	PE1A	Channel 1A Output Preemphasis Logic Input. PE1A is internally pulled down.
22	MODEA	OOB Threshold Logic Input A. MODEA is internally pulled down.
25	IN1AM	Inverting Input 1A
26	IN1AP	Noninverting Input 1A
28	OUT0AM	Inverting Output 0A
29	OUT0AP	Noninverting Output 0A
31	IN0BM	Inverting Input 0B
32	IN0BP	Noninverting Input 0B
34	OUT1BM	Inverting Output 1B
35	OUT1BP	Noninverting Output 1B
38	ENB	Active-High Enable Input B. Drive ENB low to put B channels in standby mode. Drive ENB high to put B channels in normal operation. ENB is internally pulled down.
39	EQ0B	Channel 0B Input Equalizer Logic Input. EQ0B is internally pulled down.
40	PE0B	Channel 0B Output Preemphasis Logic Input. PE0B is internally pulled down.
41	EQ1B	Channel 1B Input Equalizer Logic Input. EQ1B is internally pulled down.
42	PE1B	Channel 1B Output Preemphasis Logic Input. PE1B is internally pulled down.
—	EP	Exposed Pad. Internally connected to GND. EP must be electrically connected to a ground plane for proper thermal and electrical operation. Do not use EP as the sole ground connection.

Functional Diagram

Typical Application Circuit

Detailed Description

The MAX14980 consists of four identical redrivers with input equalization and output preemphasis useful for SAS or SATA signals up to 6.0GT/s.

Input/Output Terminations

Inputs and outputs are internally 50Ω terminated to V_{CC} (see the *Functional Diagram*) and must be AC-coupled using 12nF (max) capacitors to the SAS/SATA controller IC and SAS/SATA device for proper operation.

Enable Inputs (ENA, ENB)

The MAX14980 features two active-high enable inputs (ENA, ENB). ENA and ENB have internal pulldown resistors of 70kΩ (typ). When ENA or ENB is driven low or left unconnected, the A or B channels enter low-power standby mode and the redrivers are disabled.

Drive ENA or ENB high to place channel A or B in normal operation (see Table 1).

Out-of-Band Threshold Selector (MODEA, MODEB)

The MAX14980 provides full OOB signal support through high-speed amplitude detection circuitry. OOB differential input signals less than the internal OOB threshold ($V_{SQ-DIFF}$) are detected as off and not passed to the output. This prevents the system from responding to unwanted noise. OOB differential input signals higher than $V_{SQ-DIFF}$ are detected as on and passed to the output, allowing OOB signals to transmit through the MAX14980. The logic level of the MODE inputs sets $V_{SQ-DIFF}$ for either SAS or SATA OOB signals (see Table 2). MODEA and MODEB have internal pulldown resistors of 70kΩ (typ).

Table 1. Enable Inputs (ENA, ENB)

ENA	ENB	CHANNEL 1A	CHANNEL 0A	CHANNEL 1B	CHANNEL 0B
0	0	STANDBY	STANDBY	STANDBY	STANDBY
0	1	STANDBY	STANDBY	ENABLED	ENABLED
1	0	ENABLED	ENABLED	STANDBY	STANDBY
1	1	ENABLED	ENABLED	ENABLED	ENABLED

Table 2. Out-of-Band Logic Threshold (MODEA, MODEB)

MODEA	MODEB	CHANNEL 1A	CHANNEL 0A	CHANNEL 1B	CHANNEL 0B
0	0	SAS	SAS	SAS	SAS
0	1	SAS	SAS	SATA	SATA
1	0	SATA	SATA	SAS	SAS
1	1	SATA	SATA	SATA	SATA

Input Equalization (EQ0A, EQ1A, EQ0B, EQ1B)

The MAX14980 features control logic inputs (EQ0A, EQ1A, EQ0B, EQ1B) to enable input equalization on each channel, providing 3dB of boost (see Note 4 in the *Electrical Characteristics* table). Drive EQ_ high to enable input equalization. Drive EQ_ low to disable input equalization (see Table 3). EQ0A, EQ1A, EQ0B, and EQ1B have internal pulldown resistors of 70k Ω (typ).

Output Preemphasis (PE0A, PE1A, PE0B, PE1B)

The MAX14980 features control logic inputs (PE0A, PE1A, PE0B, PE1B) to enable output preemphasis on either channel, providing 3dB of boost. The MAX14980 true preemphasis, the transition signal, is increased after a changing bit, thus increasing the total energy content of the signal when employed. Drive PE_ high to enable output preemphasis. Drive PE_ low to disable output preemphasis (see Table 4). PE0A, PE1A, PE0B, and PE1B have internal pulldown resistors of 70k Ω (typ).

Table 3. Input Equalization (EQ0_, EQ1_)

EQ1_	EQ0_	CHANNEL 1_ (dB)	CHANNEL 0_ (dB)
0	0	0	0
0	1	0	3 (typ)
1	0	3 (typ)	0
1	1	3 (typ)	3 (typ)

Table 4. Output Preemphasis (PE0_, PE1_)

PE1_	PE0_	CHANNEL 1_ (dB)	CHANNEL 0_ (dB)
0	0	0	0
0	1	0	3 (typ)
1	0	3 (typ)	0
1	1	3 (typ)	3 (typ)

Applications Information**Exposed Pad Package**

The exposed pad, 42-pin TQFN package incorporates features that provide a very low thermal resistance path for heat removal from the IC. The exposed pad on the MAX14980 must be soldered to GND for proper thermal and electrical performance. For more information on exposed paddle packages, refer to Maxim Application Note HFAN-08.1: *Thermal Considerations of QFN and Other Exposed-Paddle Packages*.

Layout

Use controlled-impedance transmission lines to interface with high-speed inputs and outputs of the MAX14980. Place 2.2 μ F and 0.01 μ F power-supply bypass capacitors as close as possible to V_{CC}, recommended on each V_{CC} pin.

Power-Supply Sequencing

Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the device.

Proper power-supply sequencing is recommended for all devices. Always apply V_{CC} before applying signals, especially if the signal is not current limited.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
