Linear Vibrator Driver

ON Semiconductor®

Overview

LC898302AXA is a LRA (Linear Resonant Actuator) & ERM (Eccentric Rotating Mass) Driver IC dedicated to haptic feedback actuator and vibrator employed in mobile equipment. Due to the product superior technology, the drive frequency is automatically adjusted to the resonance frequency of the linear vibrator without the use of other external parts. As a result of this very effective drive, the vibration is as powerful as possible using very limited amount of energy compared to classical solutions

The drive and brake are fully configurable through the PWM-IF setting.

Finally, the original driving waveform allows you to reduce power consumption and it is useful to maintain battery lifetime.
