

## CRYSTAL OSCILLATOR (XO) (10 MHz TO 1.4 GHz)

### Features

- Available with any-rate output frequencies from 10 MHz to 945 MHz and select frequencies to 1.4 GHz
- 3rd generation DSPLL<sup>®</sup> with superior jitter performance
- 3x better frequency stability than SAW-based oscillators
- Internal fixed crystal frequency ensures high reliability and low aging
- Available CMOS, LVPECL, LVDS, and CML outputs
- 3.3, 2.5, and 1.8 V supply options
- Industry-standard 5 x 7 mm package and pinout
- Pb-free/RoHS-compliant

### Applications

- SONET/SDH
- Networking
- SD/HD video
- Test and measurement
- Clock and data recovery
- FPGA/ASIC clock generation

### Description

The Si530/531 XO utilizes Silicon Laboratories' advanced DSPLL<sup>®</sup> circuitry to provide a low jitter clock at high frequencies. The Si530/531 is available with any-rate output frequency from 10 to 945 MHz and select frequencies to 1400 MHz. Unlike a traditional XO, where a different crystal is required for each output frequency, the Si530/531 uses one fixed crystal to provide a wide range of output frequencies. This IC based approach allows the crystal resonator to provide exceptional frequency stability and reliability. In addition, DSPLL clock synthesis provides superior supply noise rejection, simplifying the task of generating low jitter clocks in noisy environments typically found in communication systems. The Si530/531 IC based XO is factory configurable for a wide variety of user specifications including frequency, supply voltage, output format, and temperature stability. Specific configurations are factory programmed at time of shipment, thereby eliminating long lead times associated with custom oscillators.

| 10 MHz               | −150               | −147                 | −146                 |        |
| 100 MHz              | n/a                | n/a                  | −148                 |        |

**Table 7. Environmental Compliance**

The Si530/531 meets the following qualification test requirements.

| Parameter                  | Conditions/Test Method   |
|----------------------------|--------------------------|
| Mechanical Shock           | MIL-STD-883, Method 2002 |
| Mechanical Vibration       | MIL-STD-883, Method 2007 |
| Solderability              | MIL-STD-883, Method 2003 |
| Gross & Fine Leak          | MIL-STD-883, Method 1014 |
| Resistance to Solder Heat  | MIL-STD-883, Method 2036 |
| Moisture Sensitivity Level | J-STD-020, MSL1          |
| Contact Pads               | Gold over Nickel         |

**Table 8. Thermal Characteristics**

(Typical values  $T_A = 25\text{ }^{\circ}\text{C}$ ,  $V_{DD} = 3.3\text{ V}$ )

| Parameter                              | Symbol        | Test Condition | Min | Typ  | Max | Unit                 |
|----------------------------------------|---------------|----------------|-----|------|-----|----------------------|
| Thermal Resistance Junction to Ambient | $\theta_{JA}$ | Still Air      | —   | 84.6 | —   | $^{\circ}\text{C/W}$ |
| Thermal Resistance Junction to Case    | $\theta_{JC}$ | Still Air      | —   | 38.8 | —   | $^{\circ}\text{C/W}$ |
| Ambient Temperature                    | $T_A$         |                | −40 | —    | 85  | $^{\circ}\text{C}$   |
| Junction Temperature                   | $T_J$         |                | —   | —    | 125 | $^{\circ}\text{C}$   |

**Table 9. Absolute Maximum Ratings<sup>1</sup>**

| Parameter                                                              | Symbol     | Rating                 | Unit               |
|------------------------------------------------------------------------|------------|------------------------|--------------------|
| Maximum Operating Temperature                                          | $T_{AMAX}$ | 85                     | $^{\circ}\text{C}$ |
| Supply Voltage, 1.8 V Option                                           | $V_{DD}$   | −0.5 to +1.9           | V                  |
| Supply Voltage, 2.5/3.3 V Option                                       | $V_{DD}$   | −0.5 to +3.8           | V                  |
| Input Voltage (any input pin)                                          | $V_I$      | −0.5 to $V_{DD} + 0.3$ | V                  |
| Storage Temperature                                                    | $T_S$      | −55 to +125            | $^{\circ}\text{C}$ |
| ESD Sensitivity (HBM, per JESD22-A114)                                 | ESD        | 2500                   | V                  |
| Soldering Temperature (Pb-free profile) <sup>2</sup>                   | $T_{PEAK}$ | 260                    | $^{\circ}\text{C}$ |
| Soldering Temperature Time @ $T_{PEAK}$ (Pb-free profile) <sup>2</sup> | $t_P$      | 20–40                  | seconds            |

**Notes:**

1. Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Functional operation or specification compliance is not implied at these conditions. Exposure to maximum rating conditions for extended periods may affect device reliability.
2. The device is compliant with JEDEC J-STD-020C. Refer to Si5xx Packaging FAQ available for download at [www.silabs.com/VCXO](http://www.silabs.com/VCXO) for further information, including soldering profiles.

**\*Note:** OE includes a 17 kΩ pullup resistor to V<sub>DD</sub>.

### 3. Ordering Information

The Si530/531 XO supports a variety of options including frequency, temperature stability, output format, and  $V_{DD}$ . Specific device configurations are programmed into the Si530/531 at time of shipment. Configurations can be specified using the Part Number Configuration chart below. Silicon Laboratories provides a web browser-based part number configuration utility to simplify this process. Refer to [www.silabs.com/VCXOPartNumber](http://www.silabs.com/VCXOPartNumber) to access this tool and for further ordering instructions. The Si530 and Si531 XO series are supplied in an industry-standard, RoHS compliant, 6-pad, 5 x 7 mm package. The Si531 Series supports an alternate OE pinout (pin #1) for the LVPECL, LVDS, and CML output formats. See Tables 10 and 11 for the pinout differences between the Si530 and Si531 series.

Example P/N: 530AB622M080DGR is a 5 x 7 XO in a 6 pad package. The frequency is 622.080 MHz, with a 3.3 V supply, LVPECL output and Output Enable active high polarity. Temperature stability is specified as  $\pm 20$  ppm. The part is specified for -40 to +85  $^{\circ}$ C ambient temperature range operation and is shipped in tape and reel format.

**Figure 1. Part Number Convention**

## 4. Outline Diagram and Suggested Pad Layout

Figure 2 illustrates the package details for the Si530/531. Table 12 lists the values for the dimensions shown in the illustration.

**Figure 2. Si530/531 Outline Diagram**

**Table 12. Package Diagram Dimensions (mm)**

| Dimension                                                               | Min      | Nom  | Max  |
|-------------------------------------------------------------------------|----------|------|------|
| A                                                                       | 1.50     | 1.65 | 1.80 |

|      | Position 1        | Pin 1 orientation mark (dot)                                                                                                                           |
|      | Position 2        | Product Revision (D)                                                                                                                                   |
|      | Position 3–6      | Tiny Trace Code (4 alphanumeric characters per assembly release instructions)                                                                          |
|      | Position 7        | Year (least significant year digit), to be assigned by assembly site (ex: 2007 = 7)                                                                    |
|      | Position 8–9      | Calendar Work Week number (1–53), to be assigned by assembly site                                                                                      |
|      | Position 10       | “+” to indicate Pb-Free and RoHS-compliant                                                                                                             |

## 6. 6-Pin PCB Land Pattern

Figure 4 illustrates the 6-pin PCB land pattern for the Si530/531. Table 14 lists the values for the dimensions shown in the illustration.

**Figure 4. Si530/531 PCB Land Pattern**

**Table 14. PCB Land Pattern Dimensions (mm)**

| Dimension | (mm) |
|-----------|------|
| C1        | 4.20 |
| E         | 2.54 |
| X1        | 1.55 |
| Y1        | 1.95 |

**Notes:**

**General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

**Solder Mask Design**

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 µm minimum, all the way around the pad.

**Stencil Design**

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 1:1.

**Card Assembly**

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

## DOCUMENT CHANGE LIST

### Revision 0.4 to Revision 0.5

- Updated Table 1, "Recommended Operating Conditions," on page 2.
  - Added maximum supply current specifications.
  - Specified relationship between temperature at startup and operation temperature.
- Updated Table 4, "CLK± Output Phase Jitter," on page 4 to include maximum rms jitter generation specifications and updated typical rms jitter specifications.
- Added Table 6, "CLK± Output Phase Noise (Typical)," on page 4.
- Added Output Enable active polarity as an option in Figure 1, "Part Number Convention," on page 7.

### Revision 0.5 to Revision 1.0

- Updated Note 3 in Table 1, "Recommended Operating Conditions," on page 2.
- Updated Figure 1, "Part Number Convention," on page 7.

### Revision 1.0 to Revision 1.1

- Updated Table 1, "Recommended Operating Conditions," on page 2.
  - Device maintains stable operation over –40 to +85 °C operating temperature range.
  - Supply current specifications updated for revision D.
- Updated Table 2, "CLK± Output Frequency Characteristics," on page 2.
  - Added specification for ±20 ppm lifetime stability (±7 ppm temperature stability) XO.
- Updated Table 3, "CLK± Output Levels and Symmetry," on page 3.
  - Updated LVDS differential peak-peak swing specifications.
- Updated Table 4, "CLK± Output Phase Jitter," on page 4.
- Updated Table 5, "CLK± Output Period Jitter," on page 4.
  - Revised period jitter specifications.
- Updated Table 9, "Absolute Maximum Ratings<sup>1</sup>," on page 5 to reflect the soldering temperature time at 260 °C is 20–40 sec per JEDEC J-STD-020C.
- Updated 3. "Ordering Information" on page 7.
  - Changed ordering instructions to revision D.
- Added 5. "Si530/Si531 Mark Specification" on page 9.

### Revision 1.1 to Revision 1.2

- Updated 2.5 V/3.3 V and 1.8 V CML output level specifications for Table 3 on page 3.
- Added footnotes clarifying max offset frequency test conditions for Table 4 on page 4.
- Added CMOS phase jitter specs to Table 4 on page 4.
- Removed the words "Differential Modes: LVPECL/LVDS/CML" in the footnote referring to AN256 in Table 4 on page 4.
- Separated 1.8 V, 2.5 V/3.3 V supply voltage specifications in Table 9 on page 5.
- Updated and clarified Table 9 on page 5 to include the "Moisture Sensitivity Level" and "Contact Pads" rows.
- Updated Figure 3 on page 9 and Table 13 on page 9 to reflect specific marking information. Previously, Figure 3 was generic.

### Revision 1.2 to Revision 1.3

- Added Table 8, "Thermal Characteristics," on page 5.

### Revision 1.3 to Revision 1.4

- Revised Figure 2 and Table 12 on page 8 to reflect current package outline diagram.
- Revised Figure 4 and Table 14 on page 10 to reflect the recommended PCB land pattern.

### Revision 1.4 to Revision 1.5

- Changed "Trays" to "Coil Tape" in Ordering Guide.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
