# To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to Fairchild <a href="guestions@onsemi.com">guestions@onsemi.com</a>.

# FPF2498 Adjustable OVP with 28 V Input OVT Load Switch

#### **Features**

Function	Advanced Load Switch		
Input	3.5 – 12 V		
Features	28 V Absolute Ratings on VIN  1.7 A Maximum Continuous Current Capability 80 mΩ R <sub>ON</sub> Typical Over-Voltage Protection (OVP) Over-Current Protection (OCP) Thermal Shutdown Under-Voltage Lockout (UVLO)		
ESD	Reverse Current Blocking (RCB)  15 kV IEC 61000-4-2 Air Gap		
Operating Temperature Range	-40 to +85°C		
Package	6-Ball WLCSP (1.05 x 1.3 x 0.625 mm, 0.4 mm Pitch)		
Ordering Information	FPF2498BUCX		
Top Mark	TK		

#### **Description**

The FPF2498 advanced load-management switch targets applications requiring a highly integrated solution. It disconnects loads powered from the DC power rail (<12 V) with stringent off-state current targets and high load capacitances (<100  $\mu F$ ). The FPF2498 consists of a slew-rate controlled low-impedance MOSFET switch. FPF2498 has over-voltage protection and over-temperature protection.

#### **Applications**

- Cellular Phones, Smart Phones
- Tablets

#### **Related Resources**

FPF2498 Evaluation Board

Figure 1. Block Diagram and Typical Application

#### Note:

1. Recommend  $C_{\text{LOAD}}$  value be larger than 2.2  $\mu f$ .

### **Pin Configuration**

Figure 2. Pin Assignments

## Pin Map

Name	Pin#	Туре	Default State		Description	
VIN	A2	Input	N/A	Input voltage path		
VOUT	B1	Output	N/A	Output voltage path		
ON	B2	Innut	LOW	On / Off control of device	V <sub>IH</sub> =HIGH Enabled	Enabled
ON	DZ	Input	LOVV			Disabled
OVLO	C1	Input		OVP Adjustment set by R1 and R2 and is compared to 1.2 V – $V_{IN}$ × R2 / (R1+R2) >1.2 V		
FLAGB	C2	Open- Drain Output	High-Z	Indicates a OVP / OCP / LOW / GND OVP (over 6.5 OCP (over 2 A)		Active – Indicates: OVP (over 6.5 V at 3 – 6 V) OCP (over 2 A) OTP (over 150°C)
					HIGH / V_IO	Normal Operation
GND	A1	GND	GND	Device ground		

#### **Absolute Maximum Ratings**

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameters			Max.	Unit
	Voltage on VIN to GND, VIN to VOUT, OVLO Pins			28.0	
$V_{PIN}$	Voltage on ON, FLAGB Pins	-0.3	6.0	V	
	Voltage on VOUT to GND Pins		-0.3	20.0	
I <sub>SW</sub>	Maximum Switch Current			1.75	Α
t <sub>PD</sub>	Total Power Dissipation at T <sub>A</sub> =25°C		1	W	
TJ	Operating Junction Temperature		-40	+150	°C
T <sub>STG</sub>	Storage Junction Temperature		-65	+150	°C
-	Θ <sub>JA</sub> Thermal Resistance, Junction-to-Ambient (1-inch Square Pad of 2 oz. Copper)			95 <sup>(2)</sup>	°C 447
⊕JA				110 <sup>(3)</sup>	°C/W
/	Electrostatic Discharge Capability	Human Body Model, ANSI / ESDA / JEDEC JS-001-2012	3		
ESD		Charged Device Model, JESD22-C101	2		kV
	JEC61000 4 2 System Level	Air Discharge (V <sub>IN</sub> , V <sub>ON</sub> , V <sub>OUT</sub> to GND)	15		
, A	IEC61000-4-2 System Level	Contact Discharge (V <sub>IN,</sub> V <sub>ON,</sub> V <sub>OUT</sub> to GND)	8		

#### Notes:

- Measured using 2S2P JEDEC std. PCB.
- 3. Measured using 2S2P JEDEC PCB cold plate method.

#### **Recommended Operating Conditions**

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	nbol Parameters		Max.	Unit
$V_{IN}$	Supply Voltage	3.5	12.0	V
I <sub>SW</sub> Maximum Continues Switch Current <sup>(4)</sup>			1.7	А
T <sub>A</sub>	Ambient Operating Temperature	-40	85	Ŝ

#### Note:

4. Maximum Junction Temperature = 85°C

#### **Electrical Characteristics**

Unless otherwise noted;  $V_{IN}$ =3.5 to 5.5 V,  $T_A$ =-40 to +85°C; typical values are at  $V_{IN}$ =5 V and  $T_A$ =25°C.

Continued on the following page...

#### **Electrical Characteristics**

Unless otherwise noted;  $V_{IN}=3.5$  to 5.5 V,  $T_A=-40$  to  $+85^{\circ}$ C; typical values are at  $V_{IN}=5$  V and  $T_A=25^{\circ}$ C.

Symbol	Parameter	Conditions	Min.	Тур.	Max.	Unit
t <sub>RESTART</sub>	Over-Current Blanking Time <sup>(6)</sup>	V <sub>IN</sub> =5 V I <sub>OUT</sub> ≥ 1.7 A		64		ms
tocp	Over-Current Response Time <sup>(6)</sup>	Moderate Over-Current Condition; $I_{OUT} \ge I_{LIM} V_{OUT} \le V_{IN}$		4		μs
t <sub>HOCP</sub>	Hard Over-Current Response Time	Moderate Over-Current Condition; I <sub>OUT</sub> ≥ I <sub>LIM</sub> V <sub>OUT</sub> ≤ 0 V		3		μs
t <sub>FLAGB_Release</sub>	Over-Current/Voltage/Temp. Flag Release Time <sup>(6)</sup>	Time for Flag to Release when Fault Condition Removed		100		ms

#### Notes:

- T<sub>A</sub>=25°C
- 6. This parameter is guaranteed by design and characterization; not production tested.
- 7.  $t_{DON}/t_{DOFF}/t_R/t_F$  are defined in figure below.
- 8.  $t_{ON}=t_R + t_{DON}$ .
- 9.  $t_{OFF}=t_F+t_{DOFF}$ .
- 10. After  $t_{READY}$ , the device is ready for maximum DC current load condition.

#### **Timing Diagram**

Figure 3. Timing Diagram

where:

t<sub>DON</sub>=Delay On Time;

t<sub>R</sub>=V<sub>OUT</sub> Rise Time;

t<sub>ON</sub>=Turn-On Time;

t<sub>DOFF</sub>=Delay Off Time;

t<sub>F</sub>=V<sub>OUT</sub> Fall Time; and

toff=Turn Off Time.

#### **Device Fault Behavior Timing**

Figure 4. OCP Turn-Off Timing Diagram

#### **Operation and Application Description**

#### **Input Capacitor**

To limit the voltage drop on the input supply caused by transient inrush current when the switch turns on into discharge load capacitor; a capacitor must be placed between the VIN and GND pins. A high-value  $C_{\rm IN}$  capacitor can be used to reduce the voltage drop in high-current applications.

#### **Output Capacitor**

An output capacitor should be placed between the VOUT and GND pins. This capacitor prevents parasitic board inductance from forcing  $V_{\text{OUT}}$  below ground when the switch is on. This capacitor also prevents reverse inrush current from creating a voltage spike that could damage the device in the case of a  $V_{\text{OUT}}$  short.

#### **Fault Reporting**

Upon the detection of an over-voltage, over-current, or over-temperature condition, the FLAGB signals the fault by activating LOW.

#### **Under-Voltage Lockout (UVLO)**

The under-voltage lockout turns the switch off if the input voltage drops below the lockout threshold. With the ON pin active, the input voltage rising above the UVLO threshold releases the lockout and enables the switch.

#### Over-Voltage Lockout (OVLO)

The OVLO pin sets the over-voltage lockout trip point with a resistor-divider network. OVLO adjustment is set by R1 and R2 and is compared to 1.2 V - V $_{\rm IN}$  × R2 / (R1+R2) >1.2 V. when V $_{\rm IN}$  > V $_{\rm OVLO}$  the switch turns off to ensure protection to devices connected to VOUT. A 1 M $\Omega$  or larger resistor is recommended on R1 to reduce standby power consumption. To use the default values of 5.8 V for V $_{\rm OVLO}$ , connect the OVLO pin directly to GND.

#### **Reverse-Current Blocking (RCB)**

The reverse-current blocking feature protects the input source against current flow from output to input. When the load switch is OFF, no current flows from the output to input.

#### Thermal Shutdown (TSD)

Thermal shutdown protects the die from internally or externally generated excessive temperature. During an over-temperature condition, the switch is turned off. The switch automatically turns on again if the temperature of the die drops below the threshold temperature.

#### **Current Limit**

The current limit ensures that the current flow though the switch doesn't exceed a maximum value, which can damage the device. If the current flow though the switch exceeds the trip point, the switch turns off and enters the blanking time. After the blanking time, the switch is re-enabled and checks if the fault still exists.

#### **Board Layout**

For best performance, all traces should be as short as possible. The input and output capacitors should be placed close to the device to minimize the effect that parasitic trace inductance may have on normal and short-circuit operation. Using wide traces for VIN, VOUT, GND minimizes parasitic electrical effects along with minimizing the case-to-ambient thermal impedance.

#### **Package Specific Dimensions**

D	E	X	Υ
1.300±0.030	1.050±0.030	0.325	0.250

# RECOMMENDED LAND PATTERN (NSMD PAD TYPE)

#### NOTES:

- A. NO JEDEC REGISTRATION APPLIES.
- B. DIMENSIONS ARE IN MILLIMETERS.
- C. DIMENSIONS AND TOLERANCES PER ASMEY14.5M, 2009.
- DATUM C, THE SEATING PLANE IS DEFINED BY THE SPHERICAL CROWNS OF THE BALLS.
- PACKAGE TYPICAL HEIGHT IS 586 MICRONS ±39 MICRONS (547-625 MICRONS).
- F. FOR DIMENSIONS D, E, X, AND Y, SEE PRODUCT DATASHEET.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

#### Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

**«JONHON»** (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
