2.5V / 3.3V ECL DUAL Differential 2:1 Multiplexer

Description

The NB100LVEP56 is a dual, fully differential 2:1 multiplexer. The differential data path makes the device ideal for multiplexing low skew clock or differential data signals. The device features both individual and common select inputs to address both data path and random logic applications. Common and individual selects can accept both LVECL and LVCMOS input voltage levels. Multiple V_{BB} pins are provided.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input operation, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.
