

# 3.3V 1GHz PRECISION 1:22 LVDS FANOUT BUFFER/TRANSLATOR WITH 2:1 INPUT MUX

Precision Edge®  
SY89826L

## FEATURES

- High-performance, 1GHz LVDS fanout buffer/translator
- 22 differential LVDS output pairs
- Guaranteed AC parameters over temperature and voltage:
  - > 1GHz  $f_{MAX}$
  - < 50ps within device skew
  - < 400ps  $t_r / t_f$  time
- Low jitter performance
  - < 1ps (rms) cycle-to-cycle jitter
  - < 1ps (pk-pk) total jitter
- 2:1 mux input accepts LVDS and LVPECL
- 3.3V supply voltage
- LVDS input includes internal 100Ω termination
- Output enable function
- Available in a 64-Pin EPAD-TQFP

Precision Edge®

## DESCRIPTION

The SY89826L is a precision fanout buffer with 22 differential LVDS (Low Voltage Differential Swing) output pairs. The part is designed for use in low voltage 3.3V applications that require a large number of outputs to drive precisely aligned, ultra low-skew signals to their destination. The input is multiplexed from either LVDS or LVPECL (Low Voltage Positive Emitter Coupled Logic) by the CLK\_SEL pin. The OE (Output Enable) is synchronous so that the outputs will only be enabled/disabled when they are already in the LOW state. This avoids any chance of generating a runt clock pulse when the device is enabled/disabled as can happen with an asynchronous control.

The SY89826L features a low pin-to-pin skew of less than 50ps—performance previously unachievable in a standard product having such a high number of outputs. The SY89826L is available in a single space saving package, enabling a lower overall cost solution.

## APPLICATIONS

- Enterprise networking
- High-end servers
- Communications

## FUNCTIONAL BLOCK DIAGRAM

## TRUTH TABLE

OE <sup>(1)</sup>	CLK_SEL	Q0 – Q21	/Q0 – /Q21
0	0	LOW	HIGH
0	1	LOW	HIGH
1	0	LVDS_CLK	/LVDS_CLK
1	1	LVPECL_CLK	/LVPECL_CLK

### NOTE:

1. The OE (output enable) signal is synchronized with the low level of the LVDS\_CLK and LVPECL\_CLK signal.

**Note 1.** Permanent device damage may occur if ABSOLUTE MAXIMUM RATINGS are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to ABSOLUTE MAXIMUM RATING conditions for extended periods may affect device reliability.

**Note 2.** The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.

**Note 3.** Devices are ESD sensitive. Handling precautions recommended.

## DC ELECTRICAL CHARACTERISTICS

**Power Supply:**  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{CCI}$ , $V_{CCO}$	$V_{CC}$ Core, $V_{CC}$ Output	<b>Note 4</b>	3.0	3.3	3.6	V
$I_{CCI}$	$I_{CC}$ Core	Max. $V_{CC}$		46	70	mA
$I_{CCO}$	$I_{CC}$ Output	No Load, Max. $V_{CC}$		175	260	mA

**Note 4.**  $V_{CCI}$  and  $V_{CCO}$  must be connected together on the PCB such that they remain at the same potential.  $V_{CCI}$  and  $V_{CCO}$  are not internally connected on the die.

**LVDS Input:**  $V_{CC} = 3.3\text{V} \pm 10\%$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IN}$	Input Voltage Range		0		2.4	V
$V_{ID}$	Differential Input Swing		100			mV
$I_{IL}$	Input LOW Current		-1.25			mA
$R_{IN}$	LVDS Differential Input Resistance (LVDS_CLK to /LVDS_CLK)		80	100	120	$\Omega$

**DC ELECTRICAL CHARACTERISTICS****LVPECL Input:**  $V_{CC} = 3.3V \pm 10\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ 

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	Input HIGH Voltage (Single-Ended)		$V_{CC} - 1.165$		$V_{CC} - 0.880$	V
$V_{IL}$	Input LOW Voltage		$V_{CC} - 1.945$		$V_{CC} - 1.625$	V
$V_{PP}$	Minimum Input Swing (LVPECL_CLK)	<b>Note 6</b>	300			mV
$V_{CMR}$	Common Mode Range (LVPECL_CLK)	<b>Note 7</b>	$GNDI + 1.8$		$V_{CCI} - 0.4$	V
$I_{IH}$	Input HIGH Current				150	$\mu A$
$I_{IL}$	Input LOW Current		0.5			$\mu A$

**Note 6.** The  $V_{PP}$  (min.) is defined as the minimum input differential voltage which will cause no increase in the propagation delay.**Note 7.**  $V_{CMR}$  is defined as the range within which the  $V_{IH}$  level may vary, with the device still meeting the propagation delay specification. The numbers in the table are referenced to  $V_{CCI}$ . The  $V_{IL}$  level must be such that the peak-to-peak voltage is less than 1.0V and greater than or equal to  $V_{PP}$  (min.).  $V_{CMR}$  range varies 1:1 with  $V_{CCI}$ .  $V_{CMR}$  (min) is fixed at  $GNDI + 1.8V$ .**CMOS/LVTTL Inputs:**  $V_{CC} = 3.3V \pm 10\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ 

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	Input HIGH Voltage		2.0			V
$V_{IL}$	Input LOW Voltage				0.8	V
$I_{IH}$	Input HIGH Current	$V_{IN} = V_{CC}$			150	$\mu A$
$I_{IL}$	Input LOW Current	$V_{IN} = 0.5V$	-600			$\mu A$

**LVDS Output:**  $V_{CC} = 3.3V \pm 10\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ 

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{OD}$	Differential Output Voltage	<b>Note 8, 9</b>	250	350	400	mV
$V_{OH}$	Output HIGH Voltage	<b>Note 8</b>			1.474	V
$V_{OL}$	Output LOW Voltage	<b>Note 8</b>	0.925			V
$V_{OCM}$	Output Common Mode Voltage	<b>Note 9</b>	1.125		1.375	V
$\Delta V_{OCM}$	Change in Common Mode Voltage		-50		50	mV

**Note 8.** Measured as per Figure 3,  $100\Omega$  across Q and /Q outputs.**Note 9.** Measured as per Figure 4.

**AC ELECTRICAL CHARACTERISTICS(1)**

$V_{CC} = 3.3V \pm 10\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ , unless noted.

	Part-to-Part Skew	<b>Note 6</b>			400	ps
$t_{JITTER}$	Cycle-to-Cycle Total Jitter	<b>Note 7</b> <b>Note 8</b>		<1	1 2	ps <sub>RMS</sub> ps <sub>PP</sub>
$t_r, t_f$	Output Rise/Fall Times (20% to 80%)		200	290	400	ps

- Note 1.** 100Ω termination between Q and /Q outputs. Airflow  $\geq 300$ lfpm, or exposed pad soldered to ground plane. Typical values are at nominal supply,  $T_A = 25^\circ C$ .
- Note 2.**  $f_{MAX}$  is defined as the maximum toggle frequency, measured with a 750mV LVPECL input or 350mV LVDS input. Output swing is  $\geq 200$ mV.
- Note 3.** Differential propagation delay is defined as the delay from the crossing point of the differential input signals to the crossing point of the differential output signals.
- Note 4.** Set-up and hold time applies to synchronous applications that intend to enable/disable before the next clock cycle. For asynchronous applications, set-up and hold time does not apply. OE set-up time is defined with respect to the rising edge of the clock. OE HIGH to LOW transition ensures outputs remain disabled during the next clock cycle. OE LOW to HIGH transition enables normal operation of the next input clock.
- Note 5.** The within-device skew is defined as the worst case difference between any two similar delay paths within a single device with identical input transition, operating at the same voltage and temperature.
- Note 6.** The part-to-part skew is defined as the absolute worst case difference between any two delay paths on any two devices operating at the same voltage and temperature. Part-to-part skew is the total skew difference; pin-to-pin skew + part-to-part skew.
- Note 7.** Cycle-to-cycle jitter definition: The variation in period between adjacent cycles over a random sample of adjacent cycle pairs.  $T_{JITTER\_CC} = T_n - T_{n+1}$  where T is the time between rising edges of the output signal.
- Note 8.** Total jitter definition: with an ideal clock input, no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.

**TYPICAL OPERATING CHARACTERISTICS**

$V_{CC} = 3.3V$ ,  $V_{EE} = GND$ ,  $T_A = 25^\circ C$ , unless otherwise stated

**FUNCTIONAL CHARACTERISTICS**

**LVPECL/LVDS INPUTS**

Figure 2. Simplified LVDS Input Stage

**LVDS OUTPUTS**

LVDS specifies a small swing of 350mV typical, on a nominal 1.25V common mode above ground. The common mode voltage has tight limits to permit large variations in ground between an LVDS driver and receiver. Also, change

in common mode voltage, as a function of data input, is also kept tight, to keep EMI low.

## DETAILED DESCRIPTION

The SY89826L is a precision 1:22 fanout buffer. It accepts either an LVPECL or LVDS input, selectable by an input mux, and outputs 22 LVDS output pairs. The device features a synchronous output enable. The SY89826L provides extremely low skew across its outputs.

### LVPECL\_CLK

The SY89826L allows one input with standard LVPECL voltage swing. This input may be adjusted per the data sheet characteristics regarding the CMR and minimum input swing. As the SY89826L contains no appropriate internal termination, upstream devices need to be properly terminated to provide the proper LVPECL input swing. If not being used (CLK\_SEL is LOW), this input pair may be left floating, as it is internally terminated to ground via a 75k $\Omega$  pull-down resistor.

### LVDS\_CLK

The SY89826L allows one input with standard LVDS voltage swing. The SY89826L provides an appropriate internal 100 $\Omega$  termination resistor. Hence, upstream LVDS devices do not require external termination to drive the SY89826L. If not being used (CLK\_SEL is HIGH), this input pair may be left floating.

### CLK\_SEL Input

The CLK\_SEL TTL Input is used to select either LVDS\_CLK (CLK\_SEL is LOW) or LVPECL\_CLK (CLK\_SEL is LOW),.

### OE

The SY89826L's output enable function is designed to disable the outputs only when the outputs are LOW. This avoids the possibility of generating runt pulses. The OE input is an asynchronous input, but operates as a synchronous enable. For synchronous operation, please adhere to the specific setup and hold times. When disabled, the Q outputs are LOW and the /Q outputs are HIGH.

### LVDS Outputs

The SY89826L's LVDS outputs swing typically 350mV around a 1.25V common mode voltage above ground. The common mode voltage has tight limits to permit large variations in ground between an LVDS driver and receiver. Also, change in common mode voltage, as a function of data input is kept tight to keep EMI low.

Each of the SY89826L's LVDS outputs should be terminated with a 100 $\Omega$  termination resistor including any unused output pairs. This ensures the best jitter and skew performance of the device.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
