

ECL/PECL Dual Differential 2:1 Multiplexer

MAX9384

General Description

The MAX9384 fully differential dual 2:1 multiplexer (mux) features extremely low propagation delay (560ps max) and output-to-output skew (40ps max). The device is ideal for clock and data multiplexing applications. The two 2:1 muxes are controlled individually or simultaneously through mux select inputs COM_SEL, SEL0, and SEL1. The mux select inputs are compatible with ECL/PECL logic, and are referenced to on-chip outputs V_{BB0} and V_{BB1} , nominally $V_{CC} - 1.33V$.

The differential inputs D , \bar{D} can be configured to accept a single-ended signal when the unused complementary input is connected to the on-chip supply output V_{BB} as a reference voltage. All the differential inputs have bias and clamp circuits that force the outputs to a low default when the inputs are left open or at V_{EE} . The single-ended mux select inputs have pulldowns to V_{EE} , providing low default inputs when the select inputs are left open.

The device operates with a wide supply range ($V_{CC} - V_{EE}$) of +3.0V to +5.5V for PECL or -3.0V to -5.5V for ECL, and is pin compatible with the MC100LVEL56 and MC100EL56. The MAX9384 is offered in a 20-pin wide SO package, and is specified for operation from -40°C to +85°C.

Applications

High-Speed Telecom, Datacom Applications
Central-Office Backplane Clock Distribution
Access Multiplexers (DSLAM/DLC)

Functional Diagram appears at end of data sheet.

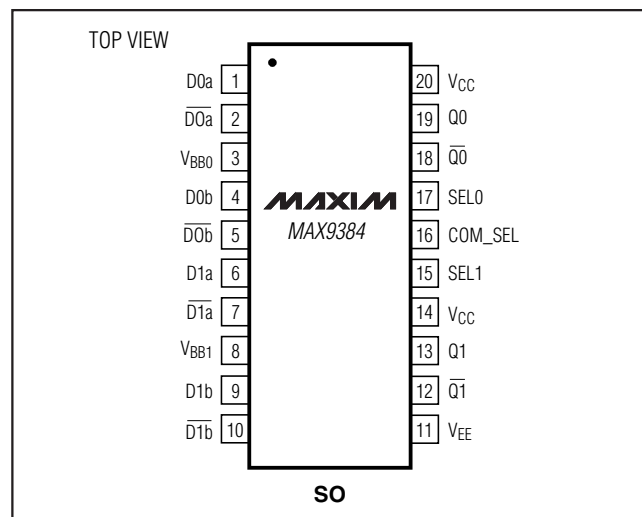

Features

- ◆ 40ps-p Deterministic Jitter
- ◆ 440ps Differential Propagation Delay
- ◆ 12ps Output-to-Output Skew
- ◆ Individual and Common Select
- ◆ +3.0V to +5.5V Supplies for Differential LVPECL/PECL
- ◆ -3.0V to -5.5V Supplies for Differential LVECL/ECL
- ◆ Outputs Low for Inputs Open or at V_{EE}
- ◆ >2kV ESD Protection (Human Body Model)
- ◆ Pin Compatible with MC100LVEL56 and MC100EL56

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Description

PIN	NAME	FUNCTION
1	D0a	Noninverting Differential Input a for MUX 0. Internal 120k Ω pulldown to V _{EE} .
2	$\overline{D0a}$	Inverting Differential Input a for MUX 0. Internal 120k Ω pulldown to V _{EE} and 120k Ω pullup to V _{CC} .
3	V _{BB0}	Reference Output Voltage. Connect to the inverting or noninverting clock input to provide a reference for single-ended operation. When used, bypass V _{BB0} to V _{CC} with a 0.01 μ F ceramic capacitor. Otherwise leave open. V _{BB0} is internally connected to V _{BB1} .
4	D0b	Noninverting Differential Input b for MUX 0. Internal 120k Ω pulldown to V _{EE} .
5	$\overline{D0b}$	Inverting Differential Input b for MUX 0. Internal 120k Ω pulldown to V _{EE} and 120k Ω pullup to V _{CC} .
6	D1a	Noninverting Differential Input a for MUX 1. Internal 120k Ω pulldown to V _{EE} .
7	$\overline{D1a}$	Inverting Differential Input a for MUX 1. Internal 120k Ω pulldown to V _{EE} and 120k Ω pullup to V _{CC} .
8	V _{BB1}	Reference Output Voltage. Connect to the inverting or noninverting clock input to provide a reference for single-ended operation. When used, bypass V _{BB1} to V _{CC} with a 0.01 μ F ceramic capacitor. Otherwise leave open. V _{BB1} is internally connected to V _{BB0} .
9	D1b	Noninverting Differential Input b for MUX 1. Internal 120k Ω pulldown to V _{EE} .
10	$\overline{D1b}$	Inverting Differential Input b for MUX 1. Internal 120k Ω pulldown to V _{EE} and 120k Ω pullup to V _{CC} .
11	V _{EE}	Negative Supply Voltage
12	$\overline{Q1}$	Inverting Output for MUX 1. Typically terminate with 50 Ω resistor to V _{CC} - 2V.
13	Q1	Noninverting Output for MUX 1. Typically terminate with 50 Ω resistor to V _{CC} - 2V.
14, 20	V _{CC}	Positive Supply Voltage. Bypass each V _{CC} to V _{EE} with 0.1 μ F and 0.01 μ F ceramic capacitors. Place the capacitors as close to the device as possible with the smaller value capacitor closest to the device.
15	SEL1	Select Logic Input for MUX 1. Internal 210k Ω pulldown to V _{EE} .
16	COM_SEL	Common Select Logic Input. Internal 210k Ω pulldown to V _{EE} .
17	SEL0	Select Logic Input for MUX 0. Internal 210k Ω pulldown to V _{EE} .
18	$\overline{Q0}$	Inverting Output for MUX 0. Typically terminate with 50 Ω resistor to V _{CC} - 2V.
19	Q0	Noninverting Output for MUX 0. Typically terminate with 50 Ω resistor to V _{CC} - 2V.

Detailed Description

The MAX9384 dual differential 2:1 multiplexer features extremely low propagation delay (560ps max) and output-to-output skew (40ps max). These features make the device ideal for clock and data multiplexing applications.

The two differential muxes are controlled individually or simultaneously through select control inputs, $SEL0$, $SEL1$, and COM_SEL (see Table 1). The select control inputs are referenced to V_{BB} (nominally $V_{CC} - 1.33V$) and are internally pulled down to V_{EE} through 210k Ω resistors. By default, the select inputs are low when left open.

The differential inputs $D_$, $\overline{D}_$ can be configured to accept a single-ended signal when the unused complementary input is connected to the on-chip reference voltage V_{BB} . The reference output voltage, pins V_{BB0} and V_{BB1} , provides the input reference voltage for single-ended operation for each mux. A single-ended input of at least $V_{BB_} \pm 95mV$ or a differential input of at least 95mV switches the outputs to the V_{OH} and V_{OL} levels

Table 1. Input Select Truth Table

CONTROL INPUT		DATA INPUT
COM_SEL	$SEL_$	$D_$, $\overline{D}_$
L or open	L or open	b*
	H	a
H	X	a

*Default input when COM_SEL and $SEL_$ are left open.

specified in the *DC Electrical Characteristics*. The maximum magnitude of the differential input from $D_$ to $\overline{D}_$ is $\pm 3.0V$. Specifications for the high and low voltages of a differential input (V_{IHD} and V_{ILD}) and the differential input voltage ($V_{IHD} - V_{ILD}$) apply simultaneously.

The device operates over a wide supply range ($V_{CC} - V_{EE}$) of +3.0V to +5.5V for PECL or -3.0V to -5.5V for ECL, and is pin compatible with the MC100LVEL56 and MC100EL56.

Single-Ended Operation

A single-ended input can be driven to V_{CC} and V_{EE} or by a single-ended LVPECL/LVECL signal. $D_$, $\overline{D}_$ are differential inputs but can be configured to accept single-ended inputs. This is accomplished by connecting the on-chip reference voltage, $V_{BB_}$, to an unused complementary input as a reference. For example, the differential $D0a$, $\overline{D0a}$ input is converted to a noninverting, single-ended input by connecting V_{BB0} to $\overline{D0a}$ and connecting the single-ended input to $D0a$. Similarly, an inverting input is obtained by connecting V_{BB0} to $D0a$ and connecting the single-ended input to $\overline{D0a}$.

When using the $V_{BB_}$ reference output, bypass it with a 0.01 μF ceramic capacitor to V_{CC} . If not used, leave it open. The $V_{BB_}$ reference can source or sink 0.5mA, which is sufficient to drive two inputs.

ECL/PECL Dual Differential 2:1 Multiplexer

Applications Information

Output Termination

Terminate the outputs through 50Ω to $V_{CC} - 2V$ or use equivalent Thevenin terminations. Terminate each Q_{-} and \overline{Q}_{-} output with identical termination on each for minimal distortion. When a single-ended signal is taken from the differential output, terminate both Q_{-} and \overline{Q}_{-} . Ensure that output currents do not exceed the current limits as specified in the *Absolute Maximum Ratings* table. Under all operating conditions, the device's total thermal limits should be observed.

Supply Bypassing

Bypass each V_{CC} to V_{EE} with high-frequency surface-mount ceramic $0.1\mu F$ and $0.01\mu F$ capacitors. Place the capacitors as close to the device as possible, with the $0.01\mu F$ capacitor closest to the device pins.

Use multiple vias when connecting the bypass capacitors to ground. When using the V_{BB0} or V_{BB1} reference outputs, bypass each one with a $0.01\mu F$ ceramic capacitor to V_{CC} . If the V_{BB0} or V_{BB1} reference outputs are not used, they can be left open.

Traces

Circuit board trace layout is very important to maintain the signal integrity of high-speed differential signals. Maintaining integrity is accomplished in part by reducing signal reflections and skew, and increasing common-mode noise immunity.

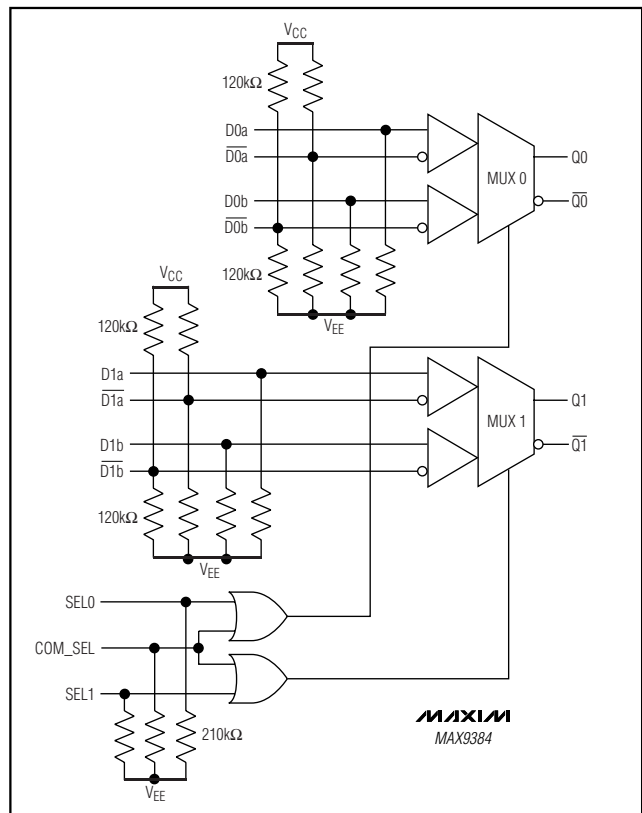

Signal reflections are caused by discontinuities in the 50Ω characteristic impedance of the traces. Avoid discontinuities by maintaining the distance between differential traces, not using sharp corners or using vias. Maintaining distance between the traces also increases common-mode noise immunity. Reducing signal skew is accomplished by matching the electrical length of the differential traces.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
