

NCP4547

ecoSwitch™ Advanced Load Management Controlled Load Switch with Low R_{ON}

The NCP4547 load switch provides a component and area-reducing solution for efficient power domain switching with inrush current limit via soft start. It is designed to integrate control and driver functionality with a high performance low on-resistance power MOSFET in a single device. This cost effective solution is ideal for power management and hot-swap applications requiring low power consumption in a small footprint.

Features

- Advanced Controller with Charge Pump
- Integrated N-Channel MOSFET with ESD Protection
- Soft-Start via Adjustable Slew Rate Control
- Low On-Resistance
- Input Voltage Range 0.5 V to 6 V
- Low Standby Current
- Load Bleed Function
- No External Components Required
- Enable Pins with CMOS Input Levels
- This is a Pb-Free Device

Typical Applications

- Notebook and Tablet Computers
- Handheld Electronics
- Digital Cameras
- Portable Medical Devices
- Hard Drives
- Peripheral Ports

25	BLEED	Load bleed connection															

NCP4547

ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage Range	V_{CC}	-0.3 to 6	V
Input Voltage Range	V_{IN}	-0.3 to 6	V
Output Voltage Range	V_{OUT}	-0.3 to 6	V
EN/POL Digital Input Range	V_{EN}	-0.3 to ($V_{CC} + 0.3$)	V
Thermal Resistance, Junction-to-Air (Note 1)	$R_{\theta JA}$	40.5	°C/W
Thermal Resistance, Junction-to-Air (Note 2)	$R_{\theta JA}$	28.4	°C/W
Thermal Resistance, Junction-to-Case (V_{IN} Paddle)	$R_{\theta JC}$	1.37	°C/W
Continuous MOSFET Current (Note 3)	I_{MAX}	21.5	A
Total Power Dissipation @ $T_A = 25^\circ\text{C}$ (Notes 1 and 4) Derate above $T_A = 25^\circ\text{C}$	P_D	1.61 24.7	W mW/°C
Total Power Dissipation @ $T_A = 25^\circ\text{C}$ (Notes 2 and 4) Derate above $T_A = 25^\circ\text{C}$	P_D	2.29 35.2	W mW/°C
Storage Temperature Range	T_{STG}	-40 to 150	°C
Lead Temperature, Soldering (10 sec.)	T_{SLD}	260	°C
ESD Capability, Human Body Model (Note 5)	ESD_{HBM}	3.5	kV
ESD Capability, Machine Model (Note 5)	ESD_{MM}	200	V
ESD Capability, Charged Device Model (Note 5)	ESD_{CDM}	1	kV
Latch-up Current Immunity (Note 5)	LU	100	mA

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Surface-mounted on FR4 board using the minimum recommended pad size, 1 oz Cu.
2. Surface-mounted on FR4 board using 1 sq-in pad, 1 oz Cu.
3. Current limited by package.
4. Specified for derating purposes only, ensure that I_{MAX} is never exceeded.
5. Tested by the following methods @ $T_A = 25^\circ\text{C}$:
 ESD Human Body Model tested per AEC-Q100-002 (EIA/JESD22-A114)
 ESD Machine Model tested per EIA/JESD22-A115
 ESD Charged Device Model per ESD-STM5.3.1-1999
 Latch-up Current Maximum Rating: ≤ 100 mA per JEDEC standard: JESD78

APPLICATIONS INFORMATION

On-Resistance

The MOSFET gate voltage in the NCP4547 is driven by a charge pump in the controller circuit. The output voltage of the charge pump is dependent on the voltage on V_{CC} . The R_{ON} of the MOSFET is in turn dependent on its V_{GS} . Care must be taken to ensure a sufficient V_{CC} voltage is used to create the desired R_{ON} given the anticipated input voltage.

Enable Control

The NCP4547 allows for enabling the MOSFET in either an active-high or active-low configuration. When the EN and POL pins are both at a logic high level or both at a logic low level and the V_{CC} supply pin has an adequate voltage applied, the MOSFET will be enabled. Similarly, when the EN and POL pins are at different logic levels, the MOSFET will be disabled.

An internal pull down resistor on the EN pin and an internal pull up resistor on the POL pin ensure that the MOSFET will be disabled when neither pin is driven. The internal pull down or pull up resistor can also be used to allow for only one of the pins to be driven in either an active-high or active-low state.

Parametric Adjustments

The NCP4547 can be used in several configurations depending on the need to control turn-on delay, slew rate, and bleed resistance. Default minimum values of each parameter are built into the part without the requirement of external components. This configuration is shown above in Figure 1.

Figures 22 and 23 show alternate configurations where external components are used to modify the turn-on delay, slew rate, and total bleed resistance.

Figure 22 shows an external capacitor, C_{COMBO} , connected from the V_{OUT} pin to both the DELAY and SR pins. This allows for one external capacitor to be used to modify the turn-on delay and slew rate. Note that the value of C_{COMBO} is used in Equations 1 and 2 (below) in place of C_{DEL} and C_{SR} respectively.

Figure 23 shows the use of two external capacitors for independent control of the turn-on delay and slew rate.

Turn-On Delay

The NCP4547 provides a time delay between the input transitions on EN (or POL) to the MOSFET turning on. The

turn-on delay can be increased with an external capacitor added between the DELAY pin and either ground or the V_{OUT} pin as shown in Figures 22 and 23.

The total delay is calculated by adding the default turn-on delay to a delta term which is calculated as follows:

$$\Delta t = K_{DEL} * C_{DEL} \quad (\text{eq. 1})$$

where K_{DEL} is a constant and C_{DEL} is the off-chip capacitance added between the DELAY pin to either ground or the V_{OUT} pin (see table below). When no external capacitor is present, the delay will be the specified default turn-on delay.

Slew Rate Control

The NCP4547 is equipped with controlled output slew rate which provides soft start functionality. This limits the inrush current caused by capacitor charging and enables this device to be used in hot swapping applications. The slew rate can be decreased with an external capacitor added between the SR pin and the V_{OUT} pin as shown in Figures 22 and 23.

The slew rate can be calculated as follows:

$$SR = \frac{K_{SR}}{C_{SR} + C_{CHIP}} \quad (\text{eq. 2})$$

where K_{SR} is a constant, C_{SR} is the off-chip capacitance added between the SR pin and the V_{OUT} pin, and C_{CHIP} is the on-chip capacitance (see table below). Note that this equation is only valid for $C_{SR} \geq 470$ pF. When no external capacitor is present, the slew rate will be the specified default slew rate.

Load Bleed

The NCP4547 has an on-chip bleed resistor that can be used to bleed the charge off of the load to ground after the MOSFET has been disabled. In series with the bleed resistor is a bleed switch which is enabled whenever the MOSFET is disabled. Delays are added to the enable of this switch to ensure that both the MOSFET and the bleed switch are not concurrently active. The total bleed resistance can be increased by adding a resistor between the BLEED pin and the V_{OUT} pin as shown in Figures 22 and 23. If the load bleed function is not desired, the BLEED pin should be tied to ground or left floating.

SLEW RATE AND TURN-ON DELAY

Parameter	Conditions	Symbol	Min	Typ	Max	Unit
Turn-on Delay Constant		K_{DEL}		1.65		M Ω
External Delay Capacitance (Note 10)	Between DEL pin and GND	C_{DEL}			10	nF
Slew Rate Constant		K_{SR}		1.43		μ A
External Slew Rate Capacitance (Note 10)	Between SR pin and V_{OUT} pin	C_{SR}			2	nF
Internal Slew Rate Capacitance		C_{CHIP}		150		pF
External Combo Capacitance (Note 10)	Between SR & DEL pins and V_{OUT} pin	C_{COMBO}			2	nF

10. Recommended range, larger values may be used but may degrade the performance of the part

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
