

SPX2941

1A Low Dropout Voltage Regulator Adjustable Output, Fast Response

FEATURES

- Adjustable Output Down To 1.25V
- Low Quiescent Current
- Guaranteed 1.5A Peak Output Current
- Low Dropout Voltage of 280mV @ 1A
- Extremely Tight Load and Line Regulation
- Extremely Fast Transient Response
- Reverse-battery Protection
- Internal Thermal and Current Limit Protection
- Zero Current Shutdown
- Standard TO-220 and TO-263 packages

Now Available in Lead Free Packaging

APPLICATIONS

- Powering VGA & Sound Card
- LCD Monitors
- USB Power Supply
- Power PC Supplies
- SMPS Post-Regulator
- High Efficiency Linear Power Supplies
- Battery Charger
- Portable Instrumentation
- Constant Current Regulators
- Adjustable Power Supplies

DESCRIPTION

The SPX2941 is a 1A, accurate voltage regulator with a low drop out voltage of 280mV(typ.) at 1A. These regulators are specifically designed for low voltage applications that require a low dropout voltage and a fast transient response. They are fully fault protected against over-current, reverse battery, and positive and negative voltage transients. The SPX2941 is offered in 5-pin TO-220 & TO-263 packages. For a 3A version, refer to the SPX29300 data sheet.

	$V_{EN}=0.8V$			1 2	μA
Regulator Output Current in Shutdown	(NOTE5)		10	500	μA
Thermal Resistance TO-220	Junction to Case, at Tab		3		°C/W
	Junction to Ambient		29.3		
TO-263	Junction to Case, at Tab		3		°C/W
	Junction to Ambient		31.2		

NOTE1: Dropout voltage is defined as the input to output differential at which the output voltage drops to 99% of its nominal value.

NOTE2: $V_{IN}=V_{OUT(NOMINAL)}+1V$; for example, $V_{IN}=4.3V$ for a 3.3V regulator. Employ pulse-testing procedures to minimize temperature rise.

NOTE3: Ground pin current is the regulator quiescent current. The total current drawn from the source is the sum of the load and ground currents.

NOTE4: Thermal regulation is defined as the change in the output voltage at a time T after a change in power dissipation is applied, excluding load or line regulation effects.

NOTE5: $V_{EN}\leq 0.8V$ and $V_{IN}\leq 16V$, $V_{OUT}=0$.

NOTE6: Maximum positive supply voltage of 20V must be of limited duration (<100ms) and duty cycle (<1%). The maximum continuous supply voltage is 16V.

NOTE7: $V_{REF}\leq V_{OUT}\leq (V_{IN}-1)$, $2.5V\leq V_{IN}\leq 16V$, $10mA\leq I_C\leq I_{FL}$, $T_J<T_{JMAX}$.

The SPX2941 incorporates protection against over-current faults, reversed load insertion, over temperature operation, and positive and negative transient voltage.

Thermal Considerations

Although the SPX2941 offers limiting circuitry for overload conditions, it is still necessary to insure that the maximum junction temperature is not exceeded in the application. Heat will flow through the lowest resistance path, the junction-to-case path. The tab of the device is electrically connected to GND. In order to insure the best thermal flow of the component, proper mounting is required. Consult heatsink manufacturer for thermal resistance and design of heatsink.

Power dissipation is calculated as follows:

$$PD = (V_{IN} - V_{OUT}) \cdot (I_{OUT})$$

Maximum Junction Temperature range:

$$T_J = T_{A(MAX)} + PD \cdot \theta_{JA} \text{ (thermal resistance, junction-to-ambient)}$$

Maximum junction temperature must not exceed 125°C.

Capacitor Requirements

The output capacitor is needed to insure stability and minimize the output noise. The value of the capacitor varies with the load. However, a minimum value of 10 μ F

aluminum capacitor will guarantee stability over all load conditions. A tantalum capacitor is recommended if a faster load transient response is needed. If the power source has a high AC impedance, a 0.1 μ F ceramic capacitor between input & ground is recommended.

Minimum Load Current

To ensure a proper behavior of the regulator under light load, a minimum load of 5mA for SPX2941 is required.

Typical Application Circuit

Figure 19 shows a typical applications circuit for an adjustable output regulator. The values of R1 and R2 set the output voltage value as follows:

$$V_{OUT} = V_{REF} \cdot [1 + (R1/R2)].$$

A minimum value of 10k Ω is recommended for R2 with a range between 10k Ω to 47k Ω .

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».
