

MAX12934/MAX12935

Two-Channel, Fast, Low-Power, 5kV_{RMS} Digital Isolators

General Description

The MAX12934/MAX12935 are the fastest, lowest power, 2-channel digital galvanic isolators on the market today, using Maxim's proprietary process technology. These devices transfer digital signals between circuits with different power domains while using as little as 0.65mW per channel at 1Mbps with a 1.8V supply.

The two channels of the MAX12935 transfer data in opposite directions, making the MAX12935 ideal for isolating the TX and RX lines of a transceiver. The two channels of the MAX12934 transfer data in the same direction.

The MAX12934/MAX12935 have an isolation rating of 5kV_{RMS} for 60 seconds. Both devices are available with a maximum data rate of either 25Mbps or 200Mbps and with outputs that are either default-high or default-low. The default is the state the output assumes when the input is not powered or if the input is open-circuit. See the [Ordering Information](#) for suffixes associated with each option. Independent 1.71V to 5.5V supplies on each side of the isolator also make the devices suitable for use as level translators.

The MAX12934/MAX12935 are available in a 16-pin, wide-body SOIC package. The package material has a minimum comparative tracking index (CTI) of 600V, which gives it a group 1 rating in creepage tables. All devices are rated for operation at ambient temperatures of -40°C to +125°C.

[Ordering Information](#) appears at end of data sheet.

Benefits and Features

- Robust Galvanic Isolation for Fast Digital Signals
 - 200 Mbps Data Rate
 - Withstands 5kV_{RMS} for 60s (VISO)
 - Continuously Withstands 848V_{RMS} (VIOWM)
 - Withstands $\pm 10\text{kV}$ Surge Between GNDA and GNDB with 1.2/50 μs Waveform
 - High CMTI (50kV/ μs Typical)
- Low Power Consumption
 - 1.3mW per Channel at 2Mbps with $V_{DD} = 3.3\text{V}$
 - 3.3mW per Channel at 100Mbps with $V_{DD} = 1.8\text{V}$
- Options to Support a Broad Range of Applications
 - 2 Data Rates (25Mbps/200Mbps)
 - 2 Channel Direction Configurations
 - 2 Output Default States (High or Low)

Applications

- Fieldbus Communications for Industrial Automation
- Isolated RS232, RS-485/RS-422, CAN
- General Isolation Application
- Battery Management
- Medical Systems

Safety Regulatory Approvals

(see [Safety Regulatory Approvals](#))

- UL According to UL1577
- cUL According to CSA Bulletin 5A

Functional Diagrams

Absolute Maximum Ratings

V _{DDA} to GNDA.....	-0.3V to +6V
V _{DDB} to GNDB.....	-0.3V to +6V
IN_ on Side A to GNDA.....	-0.3V to +6V
IN_ on Side B to GNDB.....	-0.3V to +6V
OUT_ on Side A to GNDA.....	-0.3V to (V _{DDA} + 0.3V)
OUT_ on Side B to GNDB.....	-0.3V to (V _{DDA} + 0.3V)
Short-Circuit Duration	
OUT_ on side A to GNDA,	
OUT_ on side B to GNDB.....	Continuous

Continuous Power Dissipation (T _A = +70°C)	
Wide SOIC (derate 14.1mW/°C above +70°C)	1126.8mW
Operating Temperature Range	-40°C to +125°C
Maximum Junction Temperature	+150°C
Storage Temperature Range	-60°C to +150°C
Soldering Temperature (reflow)	+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 1)

Wide SOIC

Junction-to-Ambient Thermal Resistance (θ _{JA})	71°C/W
Junction-to-Case Thermal Resistance (θ _{JC})	23°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

DC Electrical Characteristics

(V_{DDA} - V_{GNDA} = 1.71V to 5.5V, V_{DDB} - V_{GNDB} = 1.71V to 5.5V, T_A = -40°C to +125°C, unless otherwise noted. Typical values are at V_{DDA} - V_{GNDA} = 3.3V, V_{DDB} - V_{GNDB} = 3.3V, GNDA = GNDB, T_A = 25°C, unless otherwise noted.) (Note 2)

		2.25V ≤ V _{DD_} ≤ 2.75V			2.8	
		1.71V ≤ V _{DD_} ≤ 1.89V			5.1	

Note 2: All devices are 100% production tested at T_A = +25°C. Specifications over temperature are guaranteed by design.

Note 3: Not production tested. Guaranteed by design and characterization.

Note 4: All currents into the device are positive. All currents out of the device are negative. All voltages are referenced to their respective ground (G_{NDA} or G_{NDB}), unless otherwise noted.

Note 5: CMTI is the maximum sustainable common-mode voltage slew rate while maintaining the correct output. CMTI applies to both rising and falling common-mode voltage edges. Tested with the transient generator connected between G_{NDA} and G_{NDB} (V_{CM} = 1000V).

Safety Regulatory Approvals

UL
The MAX12934–MAX12935 wide-body SOIC are certified under UL1577. For more details, refer to file E351759.
Rated up to 5000V _{RMS} isolation voltage for single protection.
cUL (Equivalent to CSA notice 5A)
The MAX12934/MAX12935 wide-body SOIC are certified up to 5000V _{RMS} for single protection. For more details, refer to file E351759.

Table 1. Insulation Characteristics

PARAMETER	SYMBOL	CONDITIONS	VALUE	UNITS
Partial Discharge Test Voltage	V _{PR}	Method B1 = V _{IORM} × 1.875 (t = 1s, partial discharge < 5pC)	2250	V _P
Maximum Repetitive Peak Isolation Voltage	V _{IORM}	(Note 6)	1200	V _P
Maximum Working Isolation Voltage	V _{IOWM}	Continuous RMS voltage (Note 6)	848	V _{RMS}
Maximum Transient Isolation Voltage	V _{IOTM}	t = 1s	8400	V _P
Maximum Withstand Isolation Voltage	V _{ISO}	f _{SW} = 60Hz, duration = 60s (Note 7)	5000	V _{RMS}
Maximum Surge Isolation Voltage	V _{IOSM}	Basic Insulation, 1.2/50μs pulse per IEC61000-4-5	10	kV
Insulation Resistance	R _S	V _{IO} = 500V	>10 ⁹	Ω
Barrier Capacitance Side A to Side B	C _{IO}	f _{SW} = 1MHz (Note 8)	2	pF
Minimum Creepage Distance	CPG		8	mm
Minimum Clearance Distance	CLR		8	mm
Internal Clearance		Distance through insulation	0.015	mm
Comparative Tracking Index	CTI	Material Group I (IEC60112)	>600	
Climate Category			40/125/21	
Pollution Degree (DIN VDE 0110, Table 1)			2	

Note 6: V_{ISO}, V_{IOWM} and V_{IORM} are defined by the IEC 60747-5-5 standard.

Note 7: Product is qualified at V_{ISO} for 60s and 100% production tested at 120% of V_{ISO} for 1s.

Note 8: Capacitance is measured with all pins on side A and side B tied together.

Figure 1. Test Circuit (A) and Timing Diagram (B)

Typical Operating Characteristics

(V_{DDA} - V_{GNDA} = +3.3V, V_{DDB} - V_{GNDB} = +3.3V, G_{NDA} = G_{NDB}, T_A = +25°C, unless otherwise noted.)

Typical Operating Characteristics (continued)

(V_{DDA} - V_{GNDA} = +3.3V, V_{DDB} - V_{GNDB} = +3.3V, G_{NDA} = G_{NDB}, T_A = +25°C, unless otherwise noted.)

Typical Operating Characteristics (continued)

($V_{DDA} - V_{GNDA} = +3.3V$, $V_{DDB} - V_{GNDB} = +3.3V$, $GNDA = GNDB$, $T_A = +25^\circ C$, unless otherwise noted.)

Typical Operating Circuit

Detailed Description

The MAX12934/MAX12935 are a family of 2-channel digital isolators. The MAX12934 transfers digital signals between circuits with different power domain in one direction, which is convenient for applications such as digital I/O. The MAX12935 transfers digital signals in opposite directions, which is necessary for isolated RS-485 or other UART applications.

Devices are available in the 16-pin wide body SOIC package and are rated for up to 5kV_{RMS} isolation voltage for 60 seconds. This family of digital isolators offers low-power operation, high electromagnetic interference (EMI) immunity, and stable temperature performance through Maxim's proprietary process technology. The devices isolate different ground domains and block high-voltage/high-current transients from sensitive or human interface circuitry.

Devices are available with data rates from DC to 25Mbps (B/E versions) or 200Mbps (C/F versions). Each device can be ordered with default-high or default-low outputs. The default is the state the output assumes when the input is not powered or if the input is open circuit.

The devices have two supply inputs (V_{DDA} and V_{DDB}) that independently set the logic levels on either side of device. V_{DDA} and V_{DDB} are referenced to $GNDA$ and $GNDB$, respectively. The MAX12934/MAX12935 family also features a refresh circuit to ensure output accuracy when an input remains in the same state indefinitely.

Digital Isolation

The device family provides galvanic isolation for digital signals that are transmitted between two ground domains. The devices withstand differences of up to 5kV_{RMS} for up to 60 seconds, and up to 1200V_{PEAK} of continuous isolation.

Level-Shifting

The wide supply voltage range of both V_{DDA} and V_{DDB} allows the MAX12934/MAX12935 family to be used for level translation in addition to isolation. V_{DDA} and V_{DDB} can be independently set to any voltage from 1.71V to 5.5V. The supply voltage sets the logic level on the corresponding side of the isolator.

Unidirectional Channels

Each channel of the MAX12934/MAX12935 is unidirectional; it only passes data in one direction, as indicated in the functional diagram. Each device features two unidirectional channels that operate independently with guaranteed data rates from DC up to 25Mbps (B/E versions), or DC to 200Mbps (C/F versions). The output driver of each channel is push-pull, eliminating the need for pullup resistors. The outputs are able to drive both TTL and CMOS logic inputs.

Startup and Undervoltage Lockout

The V_{DDA} and V_{ddb} supplies are both internally monitored for undervoltage conditions. Undervoltage events can occur during power-up, power-down, or during normal operation due to a sagging supply voltage. When an undervoltage condition is detected on either supply, all outputs go to their default states regardless of the state of the inputs (Table 2). Figure 2 through Figure 5 show the behavior of the outputs during power-up and power-down.

Table 2. Output Behavior During Undervoltage Conditions

V _{IN_}	V _{VDDA}	V _{Vddb}	V _{OUTA_}	V _{OUTB_}
1	Powered	Powered	1	1
0	Powered	Powered	0	0
X	Undervoltage	Powered	Default	Default
X	Powered	Undervoltage	Default	Default

Figure 3. Undervoltage Lockout Behavior (MAX1293_B/C Low)

Figure 4. Undervoltage Lockout Behavior (MAX1293_E/F High)

Figure 5. Undervoltage Lockout Behavior (MAX1293_E/F Low)

Application Information

Power-Supply Sequencing

The MAX12934/MAX12935 do not require special power supply sequencing. The logic levels are set independently on either side by V_{DDA} and V_{DDB} . Each supply can be present over the entire specified range regardless of the level or presence of the other supply.

Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass V_{DDA} and V_{DDB} with 0.1μF low-ESR ceramic capacitors to GNDA and GNDB, respectively. Place the bypass capacitors as close to the power supply input pins as possible.

Layout Considerations

The PCB designer should follow some critical recommendation in order to get the best performance from the design.

- Keep the input/output traces as short as possible. Avoid using vias to make low-inductance paths for the signals.
- Have a solid ground plane underneath the high-speed signal layer.
- Keep the area underneath the MAX12934/MAX12935 free from ground and signal planes. Any galvanic or metallic connection between the field-side and logic-side defeats the isolation.

Calculating Power Dissipation

The required current for a given supply (V_{DDA} or V_{DDB}) can be estimated by summing the current required for each channel. The supply current for a channel depends on whether the channel is an input or an output, the channel's data rate, and the capacitive or resistive load if it is an output. The typical current for an input or output at any data rate can be estimated from the graphs in [Figure 6](#) and [Figure 7](#). Please note that the data in [Figure 6](#) and [Figure 7](#) are extrapolated from the supply current measurements in a typical operating condition.

The total current for a single channel is the sum of the “no load” current (shown in [Figure 6](#) and [Figure 7](#)) which is a function of Voltage and Data Rate, and the “load current” which depends upon the type of load. Current into a capacitive load is a function of the load capacitance, the switching frequency, and the supply voltage.

$$I_{CL} = C_L \times f_{SW} \times V_{DD}$$

where

I_{CL} is the current required to drive the capacitive load.

C_L is the load capacitance on the isolator's output pin.

f_{SW} is the switching frequency (bits per second/2).

V_{DD} is the supply voltage on the output side of the isolator.

Current into a resistive load depends on the load resistance, the supply voltage and the average duty cycle of the data waveform. The DC load current can be conservatively estimated by assuming the output is always high.

$$I_{RL} = V_{DD} \div R_L$$

where

I_{RL} is the current required to drive the resistive load.

V_{DD} is the supply voltage on the output side of the isolator.

R_L is the load resistance on the isolator's output pin.

Example (shown in [Figure 8](#)): A MAX12935F is operating with $V_{DDA} = 2.5V$, $V_{DDB} = 3.3V$, channel 1 operating at 100Mbps with a 15pF capacitive load, and channel 2 operating at 20Mbps with a 10pF capacitive load. Refer to [Table 3](#) and [Table 4](#) for V_{DDA} and V_{DDB} supply current calculation worksheets.

V_{DDA} must supply:

Channel 1 is an output channel operating at 2.5V and 100Mbps, consuming 1.02mA, estimated from [Figure 7](#). Channel 2 is an input channel operating at 2.5V and 20Mbps, consuming 0.33mA, estimated from [Figure 6](#). I_{CL} on channel 1 for 15pF capacitor at 2.5V and 100Mbps is 1.875mA.

Total current for side A = 1.02 + 0.33 + 1.875 = 3.225mA, typical

V_{DDB} must supply:

Channel 1 is an input channel operating at 3.3V and 100Mbps, consuming 1.13mA, estimated from [Figure 6](#). Channel 2 is an output channel operating at 3.3V and 20Mbps, consuming 0.42mA, estimated from [Figure 7](#). I_{CL} on channel 2 for 10pF capacitor at 3.3V and 20Mbps is 0.33mA.

Total current for side B = 1.13 + 0.42 + 0.33 = 1.88mA, typical

Figure 6. Supply Current per Input Channel Versus Data Rate

Figure 7. Supply Current per Output Channel Versus Data Rate

Figure 8. Example Circuit for Supply Current Calculation

Table 3. Side A Supply Current Calculation Worksheet

SIDE A		V _{DDA} = 2.5V				
CHANNEL	IN/OUT	FREQUENCY (Mbps)	LOAD TYPE	LOAD	“NO LOAD” CURRENT (mA)	LOAD CURRENT (mA)
1	OUT	100	Capacitive	15pF	1.02	2.5V x 50MHz x 15pF = 1.875mA
2	IN	20			0.33	
Total:					3.225mA	

Table 4. Side B Supply Current Calculation Worksheet

SIDE B		V _{ddb} = 3.3V				
CHANNEL	IN/OUT	FREQUENCY (Mbps)	LOAD TYPE	LOAD	“NO LOAD” CURRENT (mA)	LOAD CURRENT (mA)
1	IN	100			1.13	
2	OUT	20	Capacitive	10pF	0.42	3.3V x 10MHz x 10pF = 0.33mA
Total:					1.88mA	

Ordering Information

PART	CHANNEL CONFIGURATION	DATA RATE (Mbps)	DEFAULT OUTPUT	ISOLATION VOLTAGE (KV _{RMS})	TEMP RANGE	PIN-PACKAGE

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
