1024MB DDR2 32bits SDRAM SO-DIMM

1024MB DDR2 SDRAM 32bits SO-DIMM based 128Mx8, 8Banks, 1.8V DDR2 SDRAM with SPD

Features

Performance range

(Bandwidth 5.3GB/sec)

Part No.	Max Freq. (Clock)	Speed Grade
78.02G87.405	333MHz(3ns@CL5)	667 Mbps

- JEDEC standard 1.8V ± 0.1V Power Supply
- VDDQ = 1.8V ± 0.1V
- Internal Bank: 8 Bank
- Posted CAS
- Programmable CAS Latency: 3, 4, 5
- Programmable Additive Latency: 0, 1, 2, 3 and 4
- Write Latency(WL) = Read Latency(RL) -1
- Burst Length: 4, 8(Interleave/nibble sequential)
- Programmable Sequential / Interleave Burst Mode
- Bi-directional Differential Data-Strobe (Single-ended data-strobe is an optional feature)
- Off-Chip Driver(OCD) Impedance Adjustment
- On Die Termination
- Refresh and Self Refresh
 - Average Refresh Period 7.8us
- Serial presence detect with EEPROM
- Compliance with RoHS
- Compliance with CE
- Operating Temperature Rang:
 - Commercial 0°C ≤ TC ≤ 85°C
 - Refresh: auto-refresh, self-refresh
 - Average refresh period
 - 7.8us at 0°C ≤ TC ≤ 85°C
 - 3.9us at 85°C ≤ TC ≤ 95°C

Description

This module is 256M x 32 bit Double Data Rate SDRAM high density memory modules based on first generation of 1024MB DDR2 SDRAM respectively.

It consists of sixteen CMOS 128M x 8bit with 8banks Double Data Rate SDRAMs in 60Ball FBGA packages mounted on a 200pin glass-epoxy substrate. Three 0.1uF decoupling capacitors are mounted on the printed circuit board in parallel for each DDR2 SDRAM.

Synchronous design allows precise cycle control with the use of system clock. Data I/O transactions are possible on both edges of DQS. Range of operating frequencies, programmable latencies and burst lengths allow the same device to be useful for a variety of high bandwidth, high performance memory system applications.

Apacer Memory Product Specification

Pin Configurations (Front side/Back side)

Pin Description

Pin Name	Function	Pin Name	Function
CK0,CK1	Clock Inputs, positive line	SDA	SPD Data Input/Output
CK0,CK1	Clock Inputs, negative line	SA1,SA0	SPD address
CKE0,CKE1	Clock Enables	DQ0~DQ31	Data Input/Output
RAS	Row Address Strobe	DM0~DM3	Data Masks
CAS	Column Address Strobe	DQS0~DQS3	Data strobes
WE	Write Enable	DQS0~DQS3	Data strobes complement
S0	Chip Selects	TEST	Logic Analyzer specific test pin (No connect on So-DIMM)
A0~A9, A11~A13	Address Inputs	V _{DD}	Core and I/O Power
A10/AP	Address Input/Autoprecharge	V _{SS}	Ground
BA0,BA2	SDRAM Bank Address	V _{REF}	Input/Output Reference
ODT0,ODT1	On-die termination control	V _{DD} SPD	SPD Power
SCL	Serial Presence Detect (SPD) Clock Input	NC	Spare pins, No connect

Apacer Memory Product Specification

Input/Output Functional Description

Symbol	Type	Function
CK0-CK1 CK0-CK1	Input	The system clock inputs. All address and command lines are sampled on the cross point of the rising edge of CK and falling edge of CK. A Delay Locked Loop (DLL) circuit is driven from the clock input and output timing for read operations is synchronized to the input clock.
CKE0-CKE1	Input	Activates the DDR2 SDRAM CK signal when high and deactivates the CK signal when low, By deactivating the clocks, CKE low initiates the Power Down mode or the Self Refresh mode.
$\overline{S0}$	Input	Enables the associated DDR2 SDRAM command decoder when low and disables the command decoder when high. When the command decoder is disabled, new commands are ignored but previous operations continue. Rank 0 is selected by $\overline{S0}$, Rank 1 is selected by $\overline{S1}$. Ranks are also called "Physical banks".
\overline{RAS} , \overline{CAS} , \overline{WE}	Input	When sampled at the cross point of the rising edge of CK and falling edge of \overline{CK} , \overline{CAS} , \overline{RAS} , and \overline{WE} define the operation to be executed by the SDRAM.
BA0~BA2	Input	Selects which DDR2 SDRAM internal bank is activated.
ODT0~ODT1	Input	Asserts on-die termination for DQ, DM, DQS, and \overline{DQS} signals if enabled via the DDR2 SDRAM Extended Mode Register Set (EMRS).
A0~A9, A10/AP, A11~A13	Input	During a Bank Activate command cycle, $\overline{A0}$ defines the row address when sampled at the cross point of the rising edge of CK and falling edge of \overline{CK} . During a Read or Write command cycle, $\overline{A0}$ defines the column address when sampled at the cross point of the rising edge of CK and falling edge of CK. In addition to the column address, AP is used to invoke autoprecharge operation at the end of the burst read or write cycle. If AP is high, autoprecharge is selected and BA0-BAn defines the bank to be precharged. If AP is low, autoprecharge is disabled. During a Precharge command cycle, AP is used in conjunction with BA0-BAn to control which bank(s) to precharge. If AP is high, all banks will be precharged regardless of the state of BA0-BAn inputs. If AP is low, then BA0-BAn are used to define which bank to precharge.
DQ0~DQ31	In/Out	Data Input/Output pins.
DM0~DM3	Input	The data write masks, associated with one data byte. In Write mode, DM operates as a byte mask by allowing input data to be written if it is low but blocks the write operation if it is high. In Read mode, DM lines have no effect.
DQS0~DQS3 $\overline{DQS0}$ ~ $\overline{DQS3}$	In/Out	The data strobes, associated with one data byte, sourced with data transfers. In Write mode, the data strobe is sourced by the controller and is centered in the data window. In Read mode, the data strobe is sourced by the DDR2 SDRAMs and is sent at the leading edge of the data window. \overline{DQS} signals are complements, and timing is relative to the crosspoint of respective DQS and \overline{DQS} If the module is to be operated in single ended strobe mode, all \overline{DQS} signals must be tied on the system board to VSS and DDR2 SDRAM mode registers programmed appropriately.
V_{DD} , V_{DD} SPD, V_{SS}	Supply	Power supplies for core, I/O, Serial Presence Detect, and ground for the module.
SDA	In/Out	This is a bidirectional pin used to transfer data into or out of the SPD EEPROM. A resistor must be connected to V_{DD} to act as a pull up.
SCL	Input	This signal is used to clock data into and out of the SPD EEPROM. A resistor may be connected from SCL to V_{DD} to act as a pull up.
SA0~SA1	Input	Address pins used to select the Serial Presence Detect base address.
TEST	In/Out	The TEST pin is reserved for bus analysis tools and is not connected on normal memory modules(SO-DIMMs).

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
