MC74VHC1G01

Single 2-Input NAND Gate with Open Drain Output

The MC74VHC1G01 is an advanced high speed CMOS 2−input NAND gate with an open drain output fabricated with silicon gate CMOS technology.

The internal circuit is composed of multiple stages, including an open drain output which provides the ability to set output switching level. This allows the MC74VHC1G01 to be used to interface 5 V circuits to circuits of any voltage between V_{CC} and 7 V using an external resistor and power supply.

The MC74VHC1G01 input structure provides protection when voltages up to 7 V are applied, regardless of the supply voltage.

Features

- High Speed: t_{PD} = 3.7 ns (Typ) at V_{CC} = 5 V
- Low Internal Power Dissipation: I_{CC} = 1 μA (Max) at T_A = 25°C
- Power Down Protection Provided on Inputs
- Pin and Function Compatible with Other Standard Logic Families
- Chip Complexity: FETs = 62
- Pb−Free Packages are Available

6. C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load. Average operating current can be obtained by the equation: $I_{CC(OPR)} = C_{PD} \bullet V_{CC} \bullet f_{in} + I_{CC}$. C_{PD} is used to determine the no−load dynamic power consumption; $P_D = C_{PD} \bullet V_{CC}^2 \bullet f_{in} + I_{CC} \bullet V_{CC}$.
