## SERVICES

**Product Technologies Plus Application Design Evaluation Services**  
Littelfuse is the world leader in circuit protection. We offer an extensive selection of circuit protection technologies for Automotive applications. Littelfuse circuit protection expert staff can assist you in designing circuit protection for your most demanding applications. Solutions for over-current applications as well as over-voltage applications are available from Littelfuse.

## CIRCUIT PROTECTION TECHNOLOGIES (1-8)

- 1. Fuses/Footprint Reduction**  
MICRO2™, MICRO3™ fuses
- 2. Medium Current Cartridge Fuses**  
MCASE™ cartridge fuses; considerably smaller than JCASE® and Low Profile JCASE® fuses
- 3. Discrete High Current Fuses**  
High Current Bolt Down fuses and fuse arrays
- 4. ZCase Masterfuse**  
Smallest high current distribution product in the industry
- 5. Masterfuse**  
High current distribution array
- 6. ZCase Single MEGA**  
Minimal Footprint Bolt Down fuse
- 7. High Voltage Fuses**  
Low-current fuses for Electric and Hybrid Electric Vehicles
- 8. Battery Cable Protection**  
CABLE PRO® protectors for mounting directly inline as part of a high power cable assembly

## Description

The MICRO2™ Fuse is the new standard for vehicle circuit protection. Its sub-miniature design meets the need for more circuits to be protected while utilizing less space and its ability to cope with high temperatures in adverse environments makes the MICRO2™ Fuse of recommended choice for protection.

# LOW PROFILE MINI® 10.0MM FUSES RATED 58V

**RoHS**

**Also available:**  
**Low Profile MINI® 10.9mm**

## Description

The Low Profile MINI® fuse has similar performance characteristics as the standard MINI® fuse. The lower overall height allows for more space and weight savings. The Low Profile MINI® fuse is designed to mate with tuning-fork terminals, which provides additional weight and material savings in fuse box designs by eliminating the need for female box terminals.

# MINI® BLADE FUSE RATED 58V

## Description

MINI® style fuse for use in 42V Systems. Same Time-Current characteristic as the 32V MINI® fuse. Fits into standard MINI® fuse sockets. Has a rejection feature to prevent fuses with lower voltage rating from being wrongfully inserted into the circuit. Current rating 2A - 30A @58 VDC max.

## Time-Current Characteristics

| % of Rating | Opening Time Min / Max (s) |
|-------------|----------------------------|
| 110         | 360,000 s / -              |
| 135         | 0.75 s / 600 s             |
| 200         | 0.15 s / 5 s               |
| 350         | 0.080 s / 0.500 s          |
| 600         | 0.030 s / 0.100 s          |

## Description

Developed by Littelfuse for the automotive industry, the ATOF® fuse has become the original equipment circuit protection standard for foreign and domestic automobiles and trucks. Readily identifiable and easily replaced, this fuse can be specified for a variety of low voltage electronic applications.

# MAXI® BLADE FUSE RATED 58V

**RoHS**

## Description

The MAXI® style fuse for use in 42V Systems. Same Time-Current characteristic as the 32V MAXI fuse using "Diffusion Pill Technology" to provide predictable time delay characteristics and low heat dissipation. Fits into standard MAXI® fuse sockets. Has a rejection feature to prevent fuses with lower voltage rating from being wrongfully inserted into the circuit. Current rating 20A - 80A @58 VDC max.

## Time-Current Characteristics

| % of Rating | Opening Time Min / Max (s) |
|-------------|----------------------------|
| 100         | 360,000 s / -              |
| 135         | 60 s / 1,800 s             |
| 200         | 2 s / 60 s                 |
| 350         | 0.20 s / 7 s               |
| 600         | 0.040 s / 1 s              |

## HELPING TO MAKE THE WORLD A CLEANER PLACE TO LIVE

### Littelfuse and the Environment

As members of the global community, we at Littelfuse have always strived to understand the impact of what we do, and of what we create, on the world around us. Because of this, our concern for the environment has always been an integral and fundamental part of our business. We continually work to balance our business objectives with the need to protect and improve the local and global environment.

### Our Strategy for the Design of Eco-friendly Products

Littelfuse has established a focused program committed to developing high-performance eco-friendly products along with a comprehensive set of processing/reliability data and technical process expertise. This includes processes for eliminating, detecting and documenting the presence of hazardous materials such as

- Lead
- Cadmium
- Hexavalent Chromium
- Mercury
- Brominated flame-retardants (PBBs and PBDEs)

The Littelfuse strategy for eco-friendly products is specifically designed to help support our worldwide customers in their transition to Lead-Free processing.

All products considered to be lead-free are marked with this symbol.

Littelfuse defines lead-free as products which contain less than 1000ppm (0.1%) Lead, measured by weight of the entire product.

All RoHS compliant products are marked with this symbol.

Littelfuse follows the requirement set by the European Union for all RoHS compliant products. The European Union Directive 2002/95/EC RoHS restricts the use of Lead, Mercury, Hexavalent Chromium, Cadmium and Brominated flame-retardants (PBBs and PBDEs)

Visit [www.littelfuse.com/lead-free](http://www.littelfuse.com/lead-free) for further information.

RoHS

## Description

The Unslotted MCASE+™ Fuse is a cartridge style fuse up to 40A with female terminals for 2.8 mm male terminals. The Slotted MCASE+™ Fuse is available in amperages up to 60A and can mate with larger male terminals (e.g., 6.3mm) or even mount directly onto a busbar. It has a miniaturized footprint for optimal usage of space. It is a time delayed fuse and can handle inrush currents.

## LOW PROFILE JCASE® FUSES RATED 58V

RoHS

### Description

The Low Profile JCASE® fuse has similar performance characteristics as the standard JCASE® fuse. The lower overall height reduction allows for more space and weight savings and also allows for a shorter male blade terminal, saving additional weight and material savings in fuse box designs.

## JCASE® CARTRIDGE FUSE RATED 32V

### Description

The JCASE® is a cartridge style fuse with female terminal design. JCASE® provides both increased time delay and low voltage drop to protect high current circuits. JCASE® has the ability to handle inrush currents.

### Time-Current Characteristics

## ZCASE MASTERFUSE

RoHS

### Description

The ZCase Masterfuse product is the smallest high current distribution product in the industry. It utilizes the Z-Axis effectively to create a compact design which takes one third the footprint of a traditional solution. This package allows the user to replace multiple discrete fuses in a power distribution box with a single component, thus eliminating additional bolts, bus bars and interconnects. The output bolt is integrated into the fuse creating a reliable interface to the mating terminal due to its high torque withstandability. Keying features are available on each bolt position to ensure the correct mating ring terminal is used during assembly. The solution can also be connectorized to mate to high current terminals. This compact design enables the integration of the high current distribution into the main junction box due to its small footprint. This eliminates the need for a separate fuse box for high current distribution. By reducing the number of components required, overall system costs are reduced.

The ZCase Masterfuse product is available as a standard design with customized fuse ratings. The modular manufacturing approach enables a wide range of configurations within a product family. In addition, the form factor can be fully customized for specific applications to further optimize the system. Contact Littelfuse to review your application needs.

### Specifications

|                              |                                                            |
|------------------------------|------------------------------------------------------------|
| Mating Terminal Options:     | M10, M8, M6, M5 bolt-down connections or female terminals  |
| Operating Temperature Range: | -40°C to 125°C                                             |
| Fuse Ratings Available:      | 30-500A                                                    |
| Voltage Rating:              | 32Vdc                                                      |
| Materials:                   | Copper terminals (silver or tin plating options available) |
| Complies with:               | ISO 8820-5                                                 |

### Features and Benefits

|                  |                                                                                                       |
|------------------|-------------------------------------------------------------------------------------------------------|
| Miniaturization: | Compact design enables a 2/3 footprint reduction when compared to a traditional solution              |
| Integration:     | Enables the integration of the prefuse function into the main junction box due to its small footprint |

## MASTERFUSE

RoHS

### Description

The Masterfuse product is a configurable fuse solution combining several different fuse types (i.e. MEGA and MIDI) and ratings in one compact package. This fuse package allows the user to replace multiple discrete fuses in a power distribution box with a single component, thus eliminating additional bolts, bus bars, and interconnects that are currently used. By reducing the number of connections required, overall system reliability is increased while cost is decreased.

Each Masterfuse is customized to the user's application creating an optimized circuit protection package. Contact Littelfuse to review your application needs.

## ZCASE SINGLE MEGA/STARTER

### Description

The Single Zcase is a Minimal Footprint Bolt Down Fuse with a wide rating range up to 600A in the same packaging size. The Time Current characteristic is similar to the well known Mega Design and can be used as full wire protection until 250A. Higher ratings are mostly used for typically Starter Fuse application as a protector fuse. The fuse design is optimized for a one bolt connection M6 (40A - 250A) or M8 (300A - 600A) and can be used directly on a battery post or busbar connection. Littelfuse is offering a complete solution for the necessary stud and different busbar connections including some battery clamps.

### Specifications

- Date Code
- Running Number

**Rating is already stamped on both sides. (Rating see Table)**

Please contact your Littelfuse representative for application support and information on mating hardware.

All ZCase Starters T/C curves were performed on the left or right side of the metal bar as shown in pictures above. A 50mm<sup>2</sup> Cu wire was mounted at the mid hole (M8) of the metal bar as current feed.

## MEGA® FUSE RATED 32V

**RoHS**

**Also available:  
MEGA Clear Top Housing Fuse**

Clear Housing Material:  
Polyethersulfone (top)  
PPA (33%/35% GF) (bottom)

### Description

The MEGA® Fuse is designed for high current circuit protection up to 500A with “Diffusion Pill Technology.” The MEGA® Fuse also provides time delay characteristics. Designed and patented by Littelfuse, the MEGA® Fuse is ideal for battery and alternator protection application and other heavy gauge cables requiring ultra-high current protection.

\* Materials manufactured in Asia are produced to the same specifications as materials manufactured in North America, and meets the same test requirements. Multiple production locations are for capacity expansion only.

### Description

This MIDI® style fuse offers a bolt-on space saving fuse for high current wiring protection and provides time delay characteristics with "Diffusion Pill Technology". The MIDI® was designed and patented by Littelfuse.

## BF1 FUSE RATED 32V

**Also available:**  
**BF1 one hole version**  
**60A-125A**

### Description

This BF1 fuse is rated at 32V and offers a bolt-on fuse for high current wiring protection. Current rating 23A - 200A; with transparent housing material for easy detection of blown fuses.

### Specifications

|                        |                                                                              |

23 A - 150 A: FI = 1.25 (max. operating current:  $0.8 \times I_{rat}$  at 23°C)

200 A: FI = 2.00 (max. operating current:  $0.5 \times I_{rat}$  at 23°C)

## BF1 FUSE RATED 58V

### Description

This BF1 fuse is rated at 58V and offers a bolt-on fuse for high current wiring protection. Current rating 30A - 200A; with transparent housing material for easy detection of blown fuses.

### Specifications

|                        |                                                               |

Amps (A): 25, 30, 45, 65, 75

## 2938 Series

Auto Link PAL 2938 Series Fuse

Amps (A): 20, 30, 40, 50, 60, 70, 80

## 294 Series

Auto Link PAL 294 Series Fuse

Amps (A): 30, 40, 50, 60, 70, 80, 100, 120

## 294C Series

Auto Link PAL 294C Series Fuse

Amps (A): 20, 30, 40, 50, 60, 70, 80, 100, 120

## 295 Series

Auto Link PAL 295 Series Fuse

Amps (A): 20, 30, 40, 50, 60, 70, 80, 100, 120, 140

## 283B Series

Auto Link PAL 283B Series Fuse

Amps (A): 20, 30, 40, 50, 60, 70, 80, 100, 120, 140

## 283 Series

Auto Link PAL 283 Series Fuse

Amps (A): 20, 30, 40, 50, 60, 70, 80, 100, 120, 140

## CABLEPRO® CABLE PROTECTOR FUSES RATED 32V

Available in AWG and metric cables

**RoHS**

### Specifications

|                              |                                                            |
|------------------------------|------------------------------------------------------------|
| Voltage Rating:              | 32V                                                        |
| Interrupting rating:         | 2000A @ 32 VDC                                             |
| Operating Temperature Range: | -40°C to +125°C                                            |
| Cable Types Available:       | SAE J1127 SXT, SAE J1128 TXL, ISO 6722: Type FL2G          |
| Operating Temperature Range: | -40°C to +150°C - Optional for 150A, 175A and 200A ratings |
| Cable Type:                  | Thin wall irradiated XLPE (SAE 4GA)                        |

Available with UL recognized in 60, 100, 150 & 200 at 32V  
(UL not available with the thin wall irradiated XLPE SAE 4GA cable)

### Description

The CABLEPRO® fuse is designed to replace conventional wire fusible links in high current automotive applications. The slim package of the CABLEPRO® and the predictable and reliable performance characteristics (similar to MEGA® fuse) make this far superior over wire fusible links. Interrupting rating 2000A @ 32 VDC. CablePro is not a sealed product. To seal it a shrink tube should be used.

## BF-INLINE FUSE RATED 32V

### Specifications

|                      |                              |
|----------------------|------------------------------|
| Voltage Rating:      | 32 VDC                       |
| Housing Material:    | Heat Resistant Thermoplastic |
| Terminals:           | Crimp, Copper alloy, tinned  |
| Interrupting Rating: | 2000A @32VDC                 |

### Description

Inline fuse to protect specific cable cross-sections and insulations; Cross-section 10mm<sup>2</sup> to 35mm<sup>2</sup>. For rated voltage up to 32 VDC.

Assembly notes: The wire integrated fuse has to be insulated by using a self-adhesive shrinking tube. The wire has to be fixed on both sides of the fuse to minimize the wire forces. Recommended shrinking tube: DERAY(R)-IAKT 4:1, 24mm

## I. Introduction

The purpose of this Fuseology section is to promote a better understanding of fuses and some of the more common application details. The fuses to be considered are current-sensitive devices which are designed as the intentional weak link in the electrical circuit. The function of a fuse is to provide discrete component or complete circuit protection by reliably melting under overcurrent conditions and thus safely interrupting the flow of current.

## II. Types of Overcurrents

An overcurrent is any current which exceeds the ampere rating of wiring, equipment or devices under conditions of use. The term “overcurrent” includes both overloads and short circuits.

### A. Overloads

An overload is an overcurrent which is confined to normal current paths. An overload occurs when the current exceeds the value for which the wires or equipment are rated. This can happen when too many devices are connected to the circuit, or when a device connected to the circuit malfunctions in a way that causes it to draw higher than normal current, usually in the range of one to six times normal current. Sustained overloads eventually overheat circuit components. Therefore, fuses must open circuits experiencing sustained overloads before damage occurs.

### B. Short Circuits

A short circuit is current out of its normal path. It occurs when accident or malfunction creates an unintended path for the electricity to flow from the battery or alternator to ground. This shorter, more direct path to ground bypasses the resistance normally offered by the wiring and devices connected to the circuit. With virtually no resistance left to impede current flow, the voltage forces higher and higher current to flow through the wires to the point of the short. Under such a condition, the current will quickly build to such a high level that the heat generated can cause insulation to burn and equipment to be damaged unless the circuit is opened through the use of a fuse.

## III. Fuse Selection Parameters

Since overcurrent protection is crucial to reliable electrical system operation and safety, fuse selection and application should be carefully considered. When selecting fuses, the following parameters should be evaluated:

### A. Voltage Rating

The voltage rating, as marked on a fuse, indicates the maximum voltage of the circuit for which the fuse is designed to operate safely in the event of an overcurrent. Therefore, the fuse’s voltage rating must equal or exceed the available circuit voltage where the fuse will be installed. System voltage exceeding the fuse’s rated voltage may result in fuse damage. The voltage rating is 32 volts DC for the MINI®, MAXI®, ATO®, MIDI®, MEGA®, and CABLEPRO® Fuses.

### B. Interrupting Rating

The interrupting rating (also known as breaking capacity or short circuit rating) is the maximum current, as stated by the manufacturer, which the fuse can safely interrupt at rated voltage. During a fault or short circuit condition, a fuse may receive an instantaneous current many times greater than its normal operating current. Safe operation requires that the fuse remain intact (no body rupture) and clear the circuit. The interrupting rating is 1000A @ 32 volts DC for the MINI®, MAXI®, ATO®, JCASE®, and MIDI® Fuses, and 2000A @ 32 volts DC for the MEGA® and CABLEPRO® Fuses.

### C. Time-Current Characteristics

A fuse’s time-current characteristics determine how fast it responds to different overcurrents. All fuses have inverse time-current characteristics, so opening time decreases as overcurrents increase. Time-current characteristics are presented graphically on standardized “log-log” paper. Figure 1 is a sample time-current curve for the MAXI Fuse series for fuses rated 20-60A. Current values increase from left to right, and time increases from bottom to top. The average melting time for any current can be determined from the curve. For example, from Figure 1 it can be determined that a 20A MAXI Fuse experiencing an overload of 100A will open in about 0.5 seconds. At 40A, the same 20A MAXI Fuse would open in about 9 seconds.

Time-current curves are also used to compare fuses of the same series but of different current ratings. Suppose it was desired to compare the opening times of 20A and 60A MAXI Fuses at an overload of 100A. From the curve in Figure 1, one can see that the 20A fuse opens in about 0.5 seconds at 100 amps, whereas the 60A fuse does not open until about 50 seconds.

Figure 1: Average Melting-Current Curve for the MAXI Fuse Series (20-60A)

It is important to note that time-current curves give only average melting times and are presented as a design aid but are not considered as part of the fuse specifications.

The term used in fuse design that describes how rapidly a fuse responds to various overcurrents is the fuse's "characteristics." Automotive fuse characteristics are determined by the fuse's degree of time delay. Initial or start-up pulses are normal for many automotive applications and require fuses to have a time delay designed in to enable them to survive these pulses and still provide protection against prolonged overloads. Fuses such as the MINI® Fuse and ATO® Fuse have a moderate degree of time delay, whereas fuses like the MAXI® Fuse and MEGA® Fuse have a high degree of time delay which enables them to handle high inrush currents like those caused by motor start-ups. Figure 2 compares sample time-current curves of a 30A MINI Fuse to a 30A MAXI Fuse. To see that the MAXI Fuse has more time delay than the MINI Fuse, compare their opening times at an overload of 100A. Despite the fact that the fuses are the same rating, the MINI Fuse opens in about 0.1 seconds while the MAXI Fuse opens in about 2.2 seconds.

When selecting a fuse, the start-up pulse should be defined and then compared to the time-current curve for the fuse.

Figure 2: Average Melting-Current Curve Comparing 30A MINI Fuse to 30A MAXI Fuse

## D. Current Rating

The current rating is the maximum current which the fuse can continuously carry under specified conditions.

### 1. Normal Operating Current

The current rating of a fuse is typically derated 25% for operation at 25°C to avoid nuisance blowing. For example, a fuse with a current rating of 10A is not

usually recommended for operation at more than 7.5A in a 25°C ambient.

## 2. Rerating for Ambient Temperature

The current carrying capacity tests of fuses are performed at 25°C & will be affected by changes in ambient temperature.

At higher ambient temperatures, a fuse will respond faster to a given overload. Conversely, at lower ambient temperatures, a fuse will respond slower to a given overload. In addition, the temperature of the fuse increases as the normal operating current approaches or exceeds the rating of the fuse.

A MINI Fuse operating at 25°C and 110% of rated current has a minimum life of 100 hours. However, if that same fuse were operated at a very high ambient temperature, rerating would be necessary. Figure 3 is a sample temperature rerating curve for the MINI Fuse. The following example shows how to use such a curve.

Suppose there is a normal operating current of 15 amperes in a particular circuit, and the ambient temperature will be 105°C instead of 25°C. Which MINI Fuse rating should be used? From Figure 3, the percent of rated current to be used at an ambient temperature of 105°C is 88%, so:

$$\begin{aligned} \text{Ideal fuse rating} &= \frac{\text{Normal operating current}}{\text{Temp rerating factor} \times 0.75} \\ &= \frac{15A}{0.88 \times 0.75} \\ &= 22.73A \end{aligned}$$

Therefore, a 25A or larger MINI Fuse should be used.

## E. Transient Overcurrent Considerations

Figure 3: MINI Auto Fuse 297 Series Temperature Rerating Curve

Transient pulses of inrush current are commonplace in vehicle electrical systems. The transient overcurrent pulses affect the life of automotive fuses.

## 1. $I^2t$

$I^2t$  is an expression of the available thermal energy resulting from current flow. With regard to fuses, the term is usually expressed as melting, arcing, and total clearing  $I^2t$ . The units for  $I^2t$  are expressed in ampere-squared-seconds [ $A^2s$ ].

**Melting  $I^2t$ :** the thermal energy required to melt a specific fuse element.

**Arcing  $I^2t$ :** the thermal energy passed by a fuse during the arcing time. The magnitude of arcing  $I^2t$  is a function of the available voltage and stored energy in the circuit.

**Total Clearing  $I^2t$ :** the thermal energy through the fuse from overcurrent inception until current is completely interrupted. Total clearing  $I^2t$  = (melting  $I^2t$ ) + (arcing  $I^2t$ ).

$I^2t$  has two important applications to fuse selection. The first is pulse cycle withstand capability and the second is selective coordination.

## 2. Pulse Cycle Withstand Capability

Electrical pulses produce thermal cycling and possible mechanical fatigue that could affect the life of the fuse.

For this reason, it is important to know the pulse cycle withstand capability of the fuse, which is defined as the number of pulses of a given  $I^2t$  value that can be withstood by the fuse without opening, assuming that there is sufficient cool down time between pulses.

### WAVESHAPE

#### Square

$$i = i_c$$

$$I^2t = i_c^2 t$$

#### Trapezoidal

$$i = i_c \pm kt$$

$$I^2t = (1/3)(i_c^2 + i_b i_c + i_b^2)t$$

#### Sine

$$i = i_c \sin t$$

$$I^2t = (1/2)i_c^2 t$$

#### Triangular

$$i = \pm kt$$

$$I^2t = (1/3)i_c^2 t$$

#### Second order power

$$i = kt^2$$

$$I^2t = (1/5)i_c^2 t$$

#### Natural decay to zero

$$i = i_c e^{-t/\tau}$$

$$I^2t = (1/2)i_c^2 \tau$$

#### Natural decay to non-zero value

$$I^2t = i_b^2 t - 2\tau i_b (i_c - i_b) (e^{-t/\tau} - 1) - \tau/2 (i_c - i_b)^2 (e^{-2t/\tau} - 1)$$

Figure 4: Evaluating the  $I^2t$  of a Variety of Current Wave Shapes

Figure 4 shows how  $I^2t$  of the pulse can be calculated from the graph of the pulse current as a function of time.

Figure 5 is a graph of the pulse cycle withstand capability of blade fuses. Because electrical pulse conditions can vary considerably from one application to another, application testing is recommended to establish the ability of the fuse design to withstand the pulse condition.

Figure 5: Pulse Cycle Withstand Capability for Blade Fuses

## 3. Selective Coordination

In a selectively coordinated system, only the fuse immediately on the line side of an overcurrent opens. Upstream fuses remain closed and undamaged. All other equipment remains in service, which simplifies locating overloaded equipment or short circuits. In Figure 6, if a short circuit arises behind fuse #1, fuse #1 should open and fuse #2 should stay closed and undamaged. The condition necessary to assure this result is that the minimum melting  $I^2t$  of the supply side fuse (fuse #2) must be greater than the total clearing  $I^2t$  of the load side fuse (fuse #1). This condition results in the load side fuse opening before the supply side fuse begins to melt. Minimum melting and total clearing  $I^2t$  data are given in this catalog.

Figure 6: Selective Coordination for Fuses in Series

## IV. Voltage Drop Across Terminals

A fuse is only as good as the system in which it is used. One aspect of the electrical system that has considerable effects on the performance of the fuse is the quality of the connection between the fuse and the cable it protects. High voltage drop across the fuse/terminal interface creates additional thermal loading, which in turn causes shifts in the time-current characteristics of the fuse. Table 1 below gives the maximum recommended voltage drop per terminal for automotive fuses. Figure 7 indicates the measurement locations used to determine the voltage drop across the terminal. The voltage drop across the left terminal would be  $V_{2-4}$  and the voltage drop across the right terminal would be  $V_{1-3}$ .

| Type       | Maximum Recommended Voltage Drop Per Terminal [mV] (between points 1-3 or 2-4) |
|------------|--------------------------------------------------------------------------------|
| ATO® FUSE  | 30                                                                             |
| MINI® FUSE | 30                                                                             |
| MAXI® FUSE | 30                                                                             |
| MEGA® FUSE | 15                                                                             |

Table 1: Maximum Recommended Voltage Drop per Terminal

Figure 7: Measurement Locations along the Fuse/Terminal/Cable System Used to Determine the Voltage Drop across the Terminal

## V. Diffusion

Diffusion Pill Technology is a mixing of molecules, atoms or crystals in the solid, liquid or gaseous state. Diffusion Pill Technology is often used in the design of fuses for automotive, electronic and industrial fuse applications.

“M-effect” is the method of diffusing one metal into another to form a new alloy with a lower melting point. Littelfuse uses the “M-effect” to produce three very desirable characteristics in fuse designs: lower melting temperature, time delay, and lower voltage drop.

By affixing a diffusion pill tin to the element, the melting temperature is decreased. This decrease in melting temperature reduces the fuse rating. In order to reestablish its original rating the fuse elements’ cross section needs to increase. An increase in cross section increases the blow time at higher overload condition. A higher degree of time delay enables a fuse to withstand higher current inrush pulses. This increase in cross section reduces the overall fuse resistance and voltage drop.

## VI. Match Wire Gauge to Fuse

In order to protect wiring under all overload and short circuit conditions, it is necessary to standardize the fuse and wire selection process.

Fuses have controlled opening characteristics, and each wire gauge has its respective current carrying capacity. Fuses need to be selected to always protect the wire insulation from damage.

In the selection of wire gauge at various ambient temperatures, it is important to consider the worst case or highest ambient temperature for the application. Wires derate to a much higher degree than fuses, because wire insulation temperature capability is affected much more severely.

### Maximum Recommended Continuous Current

| Wire Size |          | Max Continuous Current (A) |         |         |         |          |
|-----------|----------|----------------------------|---------|---------|---------|----------|
|           |          | At 25°C                    |         | At 80°C |         | At 105°C |
| mm²       | Gage No. | GXL (1)                    | GPT (2) | GXL (1) | GPT (2) | GXL (1)  |
| 0.3       |          | 15                         | 10      | 11      | 4       | 9        |
| 0.5       | 20       | 21                         | 15      | 16      | 6       | 13       |
| 0.75      |          | 27                         | 21      | 20      | 7       | 17       |
| 0.8       | 18       | 31                         | 22      | 23      | 7       | 19       |
| 1         | 16       | 33                         | 23      | 25      | 9       | 20       |
| 1.5       |          | 43                         | 30      | 33      | 12      | 27       |
| 2         | 14       | 50                         | 36      | 37      | 14      | 32       |
| 2.5       |          | 60                         | 42      | 45      | 15      | 38       |
| 3         | 12       | 68                         | 47      | 51      | 18      | 42       |
| 4         |          | 80                         | 56      | 61      | 22      | 50       |
| 5         | 10       | 90                         | 65      | 68      | 23      | 58       |
| 6         |          | 103                        | 73      | 78      | 28      | 64       |
| 8         | 8        | 125                        | 87      | 96      | 30      | 79       |
| 10        |          | 146                        | 103     | 111     | 40      | 90       |
| 13        | 6        | 170                        | 120     | 129     | 47      | 105      |
| 19        | 4        | 221                        | 156     | 166     | 61      | 137      |

(1) = General purpose cross link polyethylene insulation wire with a maximum insulation temperature of 155°C.

(2) = General purpose thermoplastic insulation wire with a maximum insulation temperature of 90°C.

## Passenger Car and Commercial Vehicle

WWW.LITTELFUSE.COM

### To assist you with your design and selection processes, Littelfuse also offers:

#### Comprehensive Online Product Specs on Littelfuse.com—

Featuring easy-to-use navigation, search and selection tools, as well as additional product details. You can rely on [Littelfuse.com](http://Littelfuse.com) for instant answers and continuously up-to-date information.

**Printed Product Catalogs**—For offline and off-the-shelf convenience, our printed product catalogs include data sheets, selection tables and tutorials covering all of our core technologies. Contact your Littelfuse product representative or visit [www.littelfuse.com/about-us/product-catalogs](http://www.littelfuse.com/about-us/product-catalogs) to check availability.

**Circuit Protection Design Guides**—Our application-design center website, [www.littelfuse.com/technical-resources/application-designs](http://www.littelfuse.com/technical-resources/application-designs) offers a wealth of circuit protection guidance to help you select and apply the best circuit protection solution for your application.

As the world's #1 brand in circuit protection Littelfuse offers the broadest and deepest portfolio of circuit protection products and a global network of technical support, backed by more than 85 years of application design expertise. For all of your circuit protection needs visit our Technical Resources center at **[www.littelfuse.com/technical-resources](http://www.littelfuse.com/technical-resources)**

- **Application Notes**
- **Application Testing**
- **SPICE Models**
- **Local Technical Support**
- **Reference Designs**
- **Product Samples**
- **Technical Articles**
- **Certification Documents**
- **Data Sheets**

**WWW.LITTELFUSE.COM**

Littelfuse is the world leader in circuit protection. We offer an extensive selection of circuit protection technologies for Automotive applications. Littelfuse circuit protection expert staff can assist you in designing circuit protection for your most demanding applications. Solutions for over-current applications as well as over-voltage applications are available from Littelfuse.

**Low Current Distribution (LCD)** MICRO2, MICRO3, LP MINI, MINI, ATOF, MAXI, MCASE, LP JCASE, JCASE

**High Current Distribution (HCD)** ZCASE MASTERFUSE, MASTERFUSE, ZCASE MEGA, MIDI, BF1, MEGA, CF

**High Voltage Fuses (HEV)** OHEV

**Battery Cable Protection (BCP)** CABLE PRO and BF-Inline products for mounting directly inline as part of a high-power cable assembly

For more information, please contact your authorized Littelfuse product representative or visit our website at **[www.littelfuse.com](http://www.littelfuse.com)**

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
