Description

The H11LX series of devices each consist of a GaAs infrared emitting diode optically coupled a high speed integrated circuit detector. The output detector incorporates a Schmitt trigger, which provides hysteresis for noise immunity and pulse shaping.

The devices are in a 6-pin DIP package and available in wide-lead spacing and SMD option.

Applications

- Logic to logic isolator
- Programmable current level sensor
- Line receiver — eliminate noise and transient problems
- AC to TTL conversion — square wave shaping
- Digital programming of power supplies
- Interfaces computers with peripherals

¹. Max. I_{F(ON)} is the maximum current required to trigger the output. For examples, a 1.6mA maximum trigger current would require the LED to be driven at a current greater than 1.6mA to guarantee the device will turn on. A 10% guard band is recommended to account for degradation of the LED over its lifetime. The maximum allowable LED drive current is 60mA.
