

Device Overview

The 89HPES12T3G2 is a member of IDT's PRECISE™ family of PCI Express® switching solutions. The PES12T3G2 is a 12-lane, 3-port Gen2 peripheral chip that performs PCI Express Base switching with a feature set optimized for high performance applications such as servers, storage, and communications/networking. It provides connectivity and switching functions between a PCI Express upstream port and two downstream ports and supports switching between downstream ports.

Features

- ◆ **High Performance PCI Express Switch**
 - Twelve 5 Gbps Gen2 PCI Express lanes
 - Three switch ports
 - One x4 upstream port
 - Two x4 downstream ports
 - Low latency cut-through switch architecture
 - Support for Max Payload Size up to 2048 bytes
 - One virtual channel
 - Eight traffic classes
 - PCI Express Base Specification Revision 2.0 compliant
- ◆ **Flexible Architecture with Numerous Configuration Options**
 - Automatic per port link width negotiation to x4, x2 or x1
 - Automatic lane reversal on all ports
 - Automatic polarity inversion
 - Ability to load device configuration from serial EEPROM

- ◆ **Legacy Support**

- PCI compatible INTx emulation
- Bus locking

- ◆ **Highly Integrated Solution**

- Incorporates on-chip internal memory for packet buffering and queueing
- Integrates twelve 5 Gbps embedded SerDes with 8b/10b encoder/decoder (no separate transceivers needed)
 - Receive equalization (RxEQ)

- ◆ **Reliability, Availability, and Serviceability (RAS) Features**

- Internal end-to-end parity protection on all TLPs ensures data integrity even in systems that do not implement end-to-end CRC (ECRC)
- Supports ECRC and Advanced Error Reporting
- Supports PCI Express Native Hot-Plug, Hot-Swap capable I/O
- Compatible with Hot-Plug I/O expanders used on PC motherboards
- Supports Hot-Swap

Block Diagram

Figure 1 Internal Block Diagram

- ◆ **Power Management**
 - Utilizes advanced low-power design techniques to achieve low typical power consumption
 - Support PCI Express Power Management Interface specification (PCI-PM 1.2)
 - Supports PCI Express Active State Power Management (ASPM) link state
 - Supports PCI Express Power Budgeting Capability
 - Supports the optional PCI Express SerDes Transmit Low-Swing Voltage Mode
 - Unused SerDes are disabled and can be powered-off.
- ◆ **Testability and Debug Features**
 - Built in Pseudo-Random Bit Stream (PRBS) generator
 - Numerous SerDes test modes
 - Ability to read and write any internal register via the SMBus
 - Ability to bypass link training and force any link into any mode
 - Provides statistics and performance counters
- ◆ **Nine General Purpose Input/Output Pins**
 - Each pin may be individually configured as an input or output
 - Each pin may be individually configured as an interrupt input
 - Some pins have selectable alternate functions
- ◆ **Packaged in a 19mm x 19mm 324-ball BGA with 1mm ball spacing**

Product Description

Utilizing standard PCI Express interconnect, the PES12T3G2 provides the most efficient fan-out solution for applications requiring high throughput, low latency, and simple board layout with a minimum number of board layers. It provides 12 GBps (96 Gbps) of aggregated, full-duplex switching capacity through 12 integrated serial lanes, using proven and robust IDT technology. Each lane provides 5 Gbps of bandwidth in both directions and is fully compliant with PCI Express Base Specification, Revision 2.0.

The PES12T3G2 is based on a flexible and efficient layered architecture. The PCI Express layer consists of SerDes, Physical, Data Link and Transaction layers in compliance with PCI Express Base specification Revision 2.0. The PES12T3G2 can operate either as a store and forward or cut-through switch and is designed to switch memory and I/O transactions. It supports eight Traffic Classes (TCs) and one Virtual Channel (VC) with sophisticated resource management to enable efficient switching and I/O connectivity for servers, storage, and embedded processors with limited connectivity.

Figure 2 I/O Expansion Application

SMBus Interface

The PES12T3G2 contains two SMBus interfaces. The slave interface provides full access to the configuration registers in the PES12T3G2, allowing every configuration register in the device to be read or written by an external agent. The master interface allows the default configuration register values of the PES12T3G2 to be overridden following a reset with values programmed in an external serial EEPROM. The master interface is also used by an external Hot-Plug I/O expander.

Six pins make up each of the two SMBus interfaces. These pins consist of an SMBus clock pin, an SMBus data pin, and 4 SMBus address pins. In the slave interface, these address pins allow the SMBus address to which the device responds to be configured. In the master interface, these address pins allow the SMBus address of the serial configuration EEPROM from which data is loaded to be configured. The SMBus address is set up on negation of PERSTN by sampling the corresponding address pins. When the pins are sampled, the resulting address is assigned as shown in Table 1.

Bit	Slave SMBus Address	Master SMBus Address
1	SSMBADDR[1]	MSMBADDR[1]
2	SSMBADDR[2]	MSMBADDR[2]
3	SSMBADDR[3]	MSMBADDR[3]
4	0	MSMBADDR[4]
5	SSMBADDR[5]	1
6	1	0
7	1	1

Table 1 Master and Slave SMBus Address Assignment

As shown in Figure 3, the master and slave SMBuses may be used in a unified or split configuration. In the unified configuration, shown in Figure 3(a), the master and slave SMBuses are tied together and the PES12T3G2 acts both as a SMBus master as well as a SMBus slave on this bus. This requires that the SMBus master or processor that has access to PES12T3G2 registers supports SMBus arbitration. In some systems, this SMBus master interface may be implemented using general purpose I/O pins on a processor or micro controller, and may not support SMBus arbitration. To support these systems, the PES12T3G2 may be configured to operate in a split configuration as shown in Figure 3(b).

In the split configuration, the master and slave SMBuses operate as two independent buses and thus multi-master arbitration is never required. The PES12T3G2 supports reading and writing of the serial EEPROM on the master SMBus via the slave SMBus, allowing in system programming of the serial EEPROM.

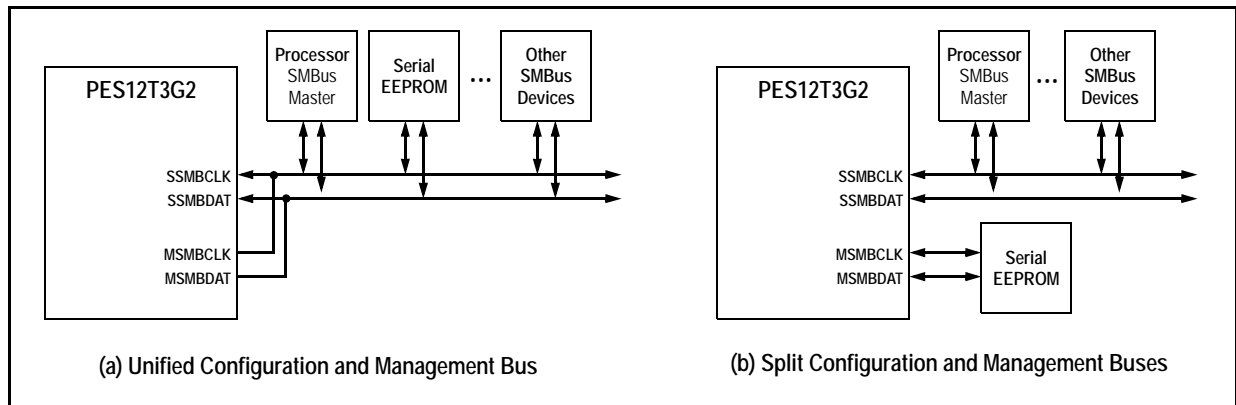

Figure 3 SMBus Interface Configuration Examples

Hot-Plug Interface

The PES12T3G2 supports PCI Express Hot-Plug on each downstream port. To reduce the number of pins required on the device, the PES12T3G2 utilizes an external I/O expander, such as that used on PC motherboards, connected to the SMBus master interface. Following reset and configuration, whenever the state of a Hot-Plug output needs to be modified, the PES12T3G2 generates an SMBus transaction to the I/O expander with the new value of all of the outputs. Whenever a Hot-Plug input changes, the I/O expander generates an interrupt which is received on the IOEXPINTN input pin (alternate function of GPIO) of the PES12T3G2. In response to an I/O expander interrupt, the PES12T3G2 generates an SMBus transaction to read the state of all of the Hot-Plug inputs from the I/O expander.

General Purpose Input/Output

The PES12T3G2 provides 9 General Purpose Input/Output (GPIO) pins that may be used by the system designer as bit I/O ports. Each GPIO pin may be configured independently as an input or output through software control. Some GPIO pins are shared with other on-chip functions. These alternate functions may be enabled via software, SMBus slave interface, or serial configuration EEPROM.

Pin Description

The following tables list the functions of the pins provided on the PES12T3G2. Some of the functions listed may be multiplexed onto the same pin. The active polarity of a signal is defined using a suffix. Signals ending with an "N" are defined as being active, or asserted, when at a logic zero (low) level. All other signals (including clocks, buses, and select lines) will be interpreted as being active, or asserted, when at a logic one (high) level.

Note: In the PES12T3G2, the two downstream ports are labeled port 2 and port 4.

Signal	Type	Name/Description
PE0RP[3:0] PE0RN[3:0]	I	PCI Express Port 0 Serial Data Receive. Differential PCI Express receive pairs for port 0. Port 0 is the upstream port.
PE0TP[3:0] PE0TN[3:0]	O	PCI Express Port 0 Serial Data Transmit. Differential PCI Express transmit pairs for port 0. Port 0 is the upstream port.
PE2RP[3:0] PE2RN[3:0]	I	PCI Express Port 2 Serial Data Receive. Differential PCI Express receive pairs for port 2.
PE2TP[3:0] PE2TN[3:0]	O	PCI Express Port 2 Serial Data Transmit. Differential PCI Express transmit pairs for port 2.
PE4RP[3:0] PE4RN[3:0]	I	PCI Express Port 4 Serial Data Receive. Differential PCI Express receive pairs for port 4.
PE4TP[3:0] PE4TN[3:0]	O	PCI Express Port 4 Serial Data Transmit. Differential PCI Express transmit pairs for port 4.
PEREFCLKP[0] PEREFCLKN[0]	I	PCI Express Reference Clock. Differential reference clock pair input. This clock is used as the reference clock by on-chip PLLs to generate the clocks required for the system logic and on-chip SerDes. The frequency of the differential reference clock is determined by the REFCLKM signal.
REFCLKM	I	PCI Express Reference Clock Mode Select. This signal selects the frequency of the reference clock input. 0x0 - 100 MHz 0x1 - 125 MHz This pin should be static and not change following the negation of PERSTN.

Table 2 PCI Express Interface Pins

Signal	Type	Name/Description
MSMBADDR[4:1]	I	Master SMBus Address. These pins determine the SMBus address of the serial EEPROM from which configuration information is loaded.
MSMBCLK	I/O	Master SMBus Clock. This bidirectional signal is used to synchronize transfers on the master SMBus.
MSMBDAT	I/O	Master SMBus Data. This bidirectional signal is used for data on the master SMBus.
SSMBADDR[5,3:1]	I	Slave SMBus Address. These pins determine the SMBus address to which the slave SMBus interface responds.
SSMBCLK	I/O	Slave SMBus Clock. This bidirectional signal is used to synchronize transfers on the slave SMBus.
SSMBDAT	I/O	Slave SMBus Data. This bidirectional signal is used for data on the slave SMBus.

Table 3 SMBus Interface Pins

Signal	Type	Name/Description
GPIO[0]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: P2RSTN Alternate function pin type: Output Alternate function: Reset output for downstream port 2.
GPIO[1]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: P4RSTN Alternate function pin type: Output Alternate function: Reset output for downstream port 4.
GPIO[2]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: IOEXPINTN0 Alternate function pin type: Input Alternate function: I/O expander interrupt 0 input.
GPIO[3]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin.
GPIO[4]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: IOEXPINTN2 Alternate function pin type: Input Alternate function: I/O Expander interrupt 2 input
GPIO[5]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin.
GPIO[6]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin.
GPIO[7]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin. Alternate function pin name: GPEN Alternate function pin type: Output Alternate function: General Purpose Event (GPE) output
GPIO[11]	I/O	General Purpose I/O. This pin can be configured as a general purpose I/O pin.

Table 4 General Purpose I/O Pins

Signal	Type	Name/Description
CCLKDS	I	Common Clock Downstream. The assertion of this pin indicates that all downstream ports are using the same clock source as that provided to downstream devices. This bit is used as the initial value of the Slot Clock Configuration bit in all of the Link Status Registers for downstream ports. The value may be overridden by modifying the SCLK bit in each downstream port's PCIELSTS register.
CCLKUS	I	Common Clock Upstream. The assertion of this pin indicates that the upstream port is using the same clock source as the upstream device. This bit is used as the initial value of the Slot Clock Configuration bit in the Link Status Register for the upstream port. The value may be overridden by modifying the SCLK bit in the P0_PCIELSTS register.
MSMBSMODE	I	Master SMBus Slow Mode. The assertion of this pin indicates that the master SMBus should operate at 100 KHz instead of 400 KHz. This value may not be overridden.
PERSTN	I	Fundamental Reset. Assertion of this signal resets all logic inside PES12T3G2 and initiates a PCI Express fundamental reset.
RSTHALT	I	Reset Halt. When this signal is asserted during a PCI Express fundamental reset, PES12T3G2 executes the reset procedure and remains in a reset state with the Master and Slave SMBuses active. This allows software to read and write registers internal to the device before normal device operation begins. The device exits the reset state when the RSTHALT bit is cleared in the SWCTL register by an SMBus master.
SWMODE[2:0]	I	Switch Mode. These configuration pins determine the PES12T3G2 switch operating mode. 0x0 - Normal switch mode 0x1 - Normal switch mode with Serial EEPROM initialization 0x2 - through 0x7 Reserved These pins should be static and not change following the negation of PERSTN.

Table 5 System Pins

Signal	Type	Name/Description
JTAG_TCK	I	JTAG Clock. This is an input test clock used to clock the shifting of data into or out of the boundary scan logic or JTAG Controller. JTAG_TCK is independent of the system clock with a nominal 50% duty cycle.
JTAG_TDI	I	JTAG Data Input. This is the serial data input to the boundary scan logic or JTAG Controller.

Table 6 Test Pins (Part 1 of 2)

Signal	Type	Name/Description
JTAG_TDO	O	JTAG Data Output. This is the serial data shifted out from the boundary scan logic or JTAG Controller. When no data is being shifted out, this signal is tri-stated.
JTAG_TMS	I	JTAG Mode. The value on this signal controls the test mode select of the boundary scan logic or JTAG Controller.
JTAG_TRST_N	I	JTAG Reset. This active low signal asynchronously resets the boundary scan logic and JTAG TAP Controller. An external pull-up on the board is recommended to meet the JTAG specification in cases where the tester can access this signal. However, for systems running in functional mode, one of the following should occur: 1) actively drive this signal low with control logic 2) statically drive this signal low with an external pull-down on the board

Table 6 Test Pins (Part 2 of 2)

Signal	Type	Name/Description
REFRES0	I/O	Port 0 External Reference Resistor. Provides a reference for the Port 0 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground.
REFRES2	I/O	Port 2 External Reference Resistor. Provides a reference for the Port 2 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground.
REFRES4	I/O	Port 4 External Reference Resistor. Provides a reference for the Port 4 SerDes bias currents and PLL calibration circuitry. A 3 kOhm +/- 1% resistor should be connected from this pin to ground.
V _{DD} CORE	I	Core V_{DD}. Power supply for core logic.
V _{DD} I/O	I	I/O V_{DD}. LVTTTL I/O buffer power supply.
V _{DD} PEA	I	PCI Express Analog Power. Serdes analog power supply (1.0V).
V _{DD} PEHA	I	PCI Express Analog High Power. Serdes analog power supply (2.5V).
V _{DD} PETA	I	PCI Express Transmitter Analog Voltage. Serdes transmitter analog power supply (1.0V).
V _{SS}	I	Ground.

Table 7 Power, Ground, and SerDes Resistor Pins

Pin Characteristics

Note: Some input pads of the PES12T3G2 do not contain internal pull-ups or pull-downs. Unused inputs should be tied off to appropriate levels. This is especially critical for unused control signal inputs which, if left floating, could adversely affect operation. Also, any input pin left floating can cause a slight increase in power consumption.

Table 10 PCIe AC Timing Characteristics (Part 2 of 2)

¹ Minimum, Typical, and Maximum values meet the requirements under PCI Specification 2.0

Signal	Symbol	Reference Edge	Min	Max	Unit	Timing Diagram Reference
GPIO						
GPIO[11,7:0] ¹	T _{pw} ²	None	50	—	ns	

Table 11 GPIO AC Timing Characteristics

¹ GPIO signals must meet the setup and hold times if they are synchronous or the minimum pulse width if they are asynchronous.

² The values for this symbol were determined by calculation, not by testing.

Signal	Symbol	Reference Edge	Min	Max	Unit	Timing Diagram Reference
JTAG						
JTAG_TCK	Tper_16a	none	50.0	—	ns	See Figure 5.
	Thigh_16a, Tlow_16a		10.0	25.0	ns	
JTAG_TMS ¹ , JTAG_TDI	Tsu_16b	JTAG_TCK rising	2.4	—	ns	
	Thld_16b		1.0	—	ns	
JTAG_TDO	Tdo_16c	JTAG_TCK falling	—	20	ns	
	Tdz_16c ²		—	20	ns	
JTAG_TRST_N	Tpw_16d ²	none	25.0	—	ns	

Table 12 JTAG AC Timing Characteristics

¹ The JTAG specification, IEEE 1149.1, recommends that JTAG_TMS should be held at 1 while the signal applied at JTAG_TRST_N changes from 0 to 1. Otherwise, a race may occur if JTAG_TRST_N is deasserted (going from low to high) on a rising edge of JTAG_TCK when JTAG_TMS is low, because the TAP controller might go to either the Run-Test/Idle state or stay in the Test-Logic-Reset state.

² The values for this symbol were determined by calculation, not by testing.

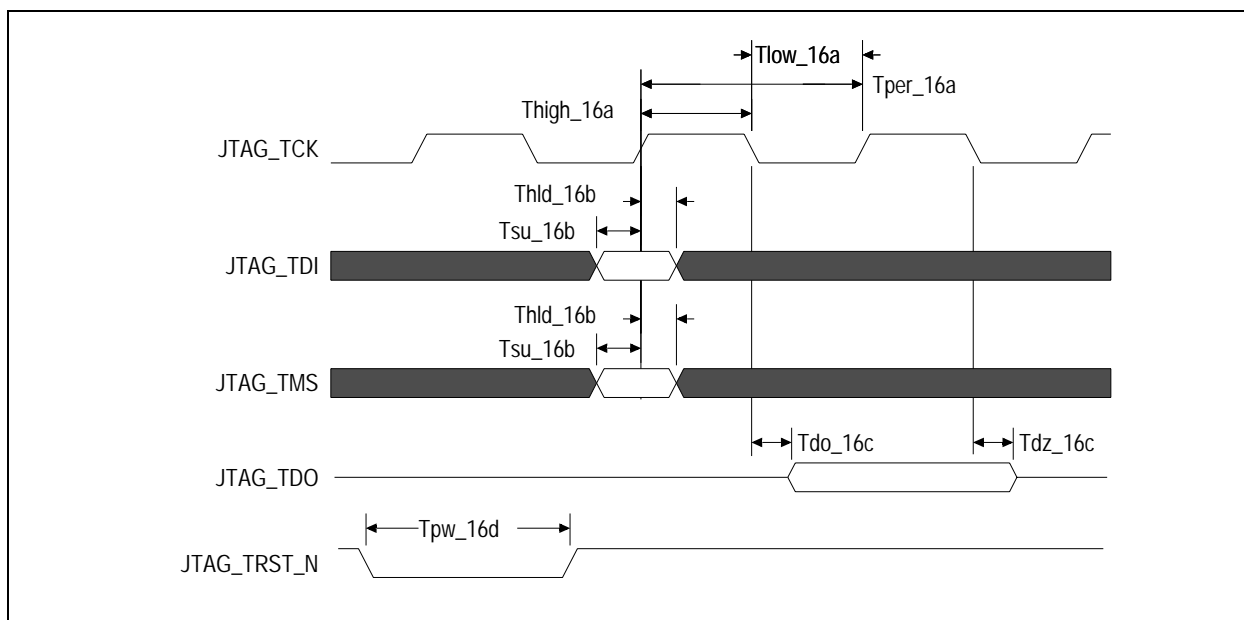

Figure 5 JTAG AC Timing Waveform

Recommended Operating Supply Voltages

Symbol	Parameter	Minimum	Typical	Maximum	Unit
V _{DD} CORE	Internal logic supply	0.9	1.0	1.1	V
V _{DD} I/O	I/O supply except for SerDes LVPECL/CML	3.135	3.3	3.465	V
V _{DD} PEA ¹	PCI Express Analog Power	0.95	1.0	1.1	V
V _{DD} PEHA ²	PCI Express Analog High Power	2.25	2.5	2.75	V
V _{DD} PETA ¹	PCI Express Transmitter Analog Voltage	0.95	1.0	1.1	V
V _{SS}	Common ground	0	0	0	V

Table 13 PES12T3G2 Operating Voltages

¹ V_{DD}PEA and V_{DD}PETA should have no more than 25mV_{peak-peak} AC power supply noise superimposed on the 1.0V nominal DC value.

² V_{DD}PEHA should have no more than 50mV_{peak-peak} AC power supply noise superimposed on the 2.5V nominal DC value.

Absolute Maximum Voltage Rating

Core Supply	PCIe Analog Supply	PCIe Analog High Supply	PCIe Transmitter Supply	I/O Supply
1.5V	1.5V	4.6V	1.5V	4.6V

Table 14 PES12T3G2 Absolute Maximum Voltage Rating

Warning: For proper and reliable operation in adherence with this data sheet, the device should not exceed the recommended operating voltages in Table 13. The absolute maximum operating voltages in Table 14 are offered to provide guidelines for voltage excursions outside the recommended voltage ranges. Device functionality is not guaranteed at these conditions and sustained operation at these values or any exposure to voltages outside the maximum range may adversely affect device functionality and reliability.

Power-Up/Power-Down Sequence

During power supply ramp-up, V_{DD}CORE must remain at least 1.0V below V_{DD}I/O at all times. There are no other power-up sequence requirements for the various operating supply voltages.

The power-down sequence can occur in any order.

Recommended Operating Temperature

Grade	Temperature
Commercial	0°C to +70°C Ambient
Industrial	-40°C to +85°C Ambient

Table 15 PES12T3G2 Operating Temperatures

Power Consumption

Typical power is measured under the following conditions: 25°C Ambient, 35% total link usage on all ports, typical voltages defined in Table 13 (and also listed below).

Maximum power is measured under the following conditions: 70°C Ambient, 85% total link usage on all ports, maximum voltages defined in Table 13 (and also listed below).

Number of active Lanes per Port		Core Supply		PCIe Analog Supply		PCIe Analog High Supply		PCIe Termination Supply		I/O Supply		Total	
		Typ 1.0V	Max 1.1V	Typ 1.0V	Max 1.1V	Typ 2.5V	Max 2.75V	Typ 1.0V	Max 1.1V	Typ 3.3V	Max 3.465V	Typ Power	Max Power

Table 16 PES12T3G2 Power Consumption

Thermal Considerations

This section describes thermal considerations for the PES12T3G2 (19mm² CABGA324 package). The data in Table 17 below contains information that is relevant to the thermal performance of the PES12T3G2 switch.

Note: It is important for the reliability of this device in any user environment that the junction temperature not exceed the T_{J(max)} value

Symbol	Parameter	Value	Units	Conditions
T _{J(max)}	Junction Temperature	125	°C	Maximum
T _{A(max)}	Ambient Temperature	70	°C	Maximum
θ _{JA(effective)}	Effective Thermal Resistance, Junction-to-Ambient	23.6	°C/W	Zero air flow
		16.8	°C/W	1 m/S air flow
		15.4	°C/W	2 m/S air flow
θ _{JB}	Thermal Resistance, Junction-to-Board	14.5	°C/W	
θ _{JC}	Thermal Resistance, Junction-to-Case	7.6	°C/W	
P	Power Dissipation of the Device	2.3	Watts	Maximum

Table 17 Thermal Specifications for PES12T3G2, 19x19 mm CABGA324 Package

specified in Table 17. Consequently, the effective junction to ambient thermal resistance (θ_{JA}) for the worst case scenario must be maintained below the value determined by the formula:

$$\theta_{JA} = (T_{J(max)} - T_{A(max)})/P$$

Given that the values of T_{J(max)}, T_{A(max)}, and P are known, the value of desired θ_{JA} becomes a known entity to the system designer. How to achieve the desired θ_{JA} is left up to the board or system designer, but in general, it can be achieved by adding the effects of θ_{JC} (value provided in Table 17), thermal resistance of the chosen adhesive (θ_{CS}), that of the heat sink (θ_{SA}), amount of airflow, and properties of the circuit board (number of layers and size of the board). As a general guideline, this device will not need a heat sink if the board has 8 or more layers AND the board size is larger than 4"x12" AND airflow in excess of 0.5 m/s is available. It is strongly recommended that users perform their own thermal analysis for their own board and system design scenarios.

DC Electrical Characteristics

Values based on systems running at recommended supply voltages, as shown in Table 13.

Note: See Table 8, Pin Characteristics, for a complete I/O listing.

I/O Type	Parameter	Description	Gen1			Gen2			Unit	Condi- tions	
			Min ¹	Typ ¹	Max ¹	Min ¹	Typ ¹	Max ¹			
Serial Link	PCIe Transmit										
	V _{TX-DIFFp-p}	Differential peak-to-peak output voltage	800		1200	800		1200	mV		
	V _{TX-DIFFp-p-LOW}	Low-Drive Differential Peak to Peak Output Voltage	400		1200	400		1200	mV		
	V _{TX-DE-RATIO-3.5dB}	De-emphasized differential output voltage	-3		-4	-3.0	-3.5	-4.0	dB		
	V _{TX-DE-RATIO-6.0dB}	De-emphasized differential output voltage	NA			-5.5	-6.0	-6.5	dB		
	V _{TX-DC-CM}	DC Common mode voltage	0		3.6	0		3.6	V		
	V _{TX-CM-ACP}	RMS AC peak common mode output voltage			20				mV		
	V _{TX-CM-DC-active-idle-delta}	Abs delta of DC common mode voltage between LO and idle			100			100	mV		
	V _{TX-CM-DC-line-delta}	Abs delta of DC common mode voltage between D+ and D-			25			25	mV		
	V _{TX-Idle-DiffP}	Electrical idle diff peak output			20			20	mV		
	RL _{TX-DIFF}	Transmitter Differential Return loss	10						10	dB	0.05 - 1.25GHz
									8	dB	1.25 - 2.5GHz
	RL _{TX-CM}	Transmitter Common Mode Return loss	6					6	dB		
	Z _{TX-DIFF-DC}	DC Differential TX impedance	80	100	120			120	Ω		
	V _{TX-CM-ACpp}	Peak-Peak AC Common	NA					100	mV		
	V _{TX-DC-CM}	Transmit Driver DC Common Mode Voltage	0		3.6	0		3.6	V		
V _{TX-RCV-DETECT}	The amount of voltage change allowed during Receiver Detection			600			600	mV			
I _{TX-SHORT}	Transmitter Short Circuit Current Limit	0		90				90	mA		

Table 18 DC Electrical Characteristics (Part 1 of 2)

	V_{SS} (Ground)		$V_{DD}PEHA$ (High Analog Power)		

PES12T3G2 Package Drawing — 324-Pin BC324/BCG324

Revision History

March 27, 2008: Initial publication of final data sheet.

April 17, 2008: In Table 16, Thermal Specifications, revised values for θ_{JA} , θ_{JB} , and θ_{JC} .

October 28, 2008: Added ZB silicon to Ordering Information section.

February 24, 2009: Revised AC Timing Characteristics table and DC Electrical Characteristics table to correct typos.

January 18, 2010: Revised Power Management list in Features section.

February 2, 2010: Added new section Absolute Maximum Voltage Rating with table.

September 13, 2010: In Table 8, changed Buffer type for PCI Express from CML to PCIe differential and changed reference clocks to HCSL.

March 30, 2011: In Table 13, added VddPETA to footnote #1.

August 10, 2011: Added Industrial temperature to Table 15 and to Order page.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
