Description

The FPF2488 features a 2-channel power switch, which offers surge protection and Over-Voltage Protection (OVP), to protect downstream components and enhancing overall system robustness.

Channel one (V_{BUS}) is an active-low, 28 V/2.5 A rated, power MOSFET switch with an internal clamp supporting ± 100 V surge protection, highly accurate fixed OVP at 10.0 V (± 100 mV), and OTG functionality. Channel two (V_{IF}) is a conditional active-high, 6 V/6 A rated, power MOSFET switch with an integrated TVS supporting ± 40 V surge protection and fixed OVP at 5.25 V (± 250 mV). V_{IF} also provides Reverse Current Blocking (RCB) during its OFF state to minimize leakage current.

V_{BUS_DET} is paired with always ON LDO to power downstream devices even with V_{BUS} is greater than 2.5 V, even when disabled through the ONB pin. This provides power sequence control or a host controlled configuration in system.

The FPF2488 is available in a 15-bump, 1.6 mm x 2.2 mm Wafer-Level Chip-Scale Package (WLCSP) with 0.4 mm pitch.
