* General purpose four-pole (1500 r/min) AC induction motor rated 400 V/50 Hz.

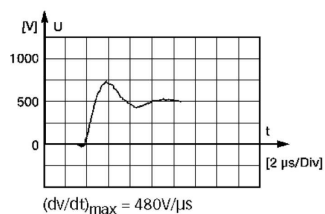

**Power loss at 16 kHz switching frequency/80m motor cable length. Exact value depends upon the motor cable type and length, switching frequency and further stray parameters within the system.

Typical measurement results

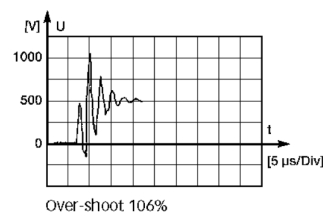

dv/dt without FN 510

dv/dt with FN 510

Overvoltages without FN 510

Overvoltages with FN 510

dv/dt reduction: maximum dv/dt at the motor terminals, measured with the motor drive operating at 14 kHz switching frequency, 5 m of shielded cable, motor with 100% load.

Overvoltage limitation: maximum overvoltages at the motor terminals, measured with the motor drive operating at 14 kHz switching frequency, 80 m of shielded cable, motor idling.

Typical application range at different operating conditions

The power loss in the filter depends mainly on the switching frequency (f_s) of the motor drive and the length of the motor cable. FN 510 have been designed for an ambient temperature of 50°C.

Other conditions can, however, occur in practice. In such cases, care must be taken to limit the maximum cable length and/or the switching frequency of the motor drive, depending on the real ambient temperature conditions.

FN 510 are designed for:

Tamb.	Max. f_s	Max. cable
50°C	10 kHz	80 m

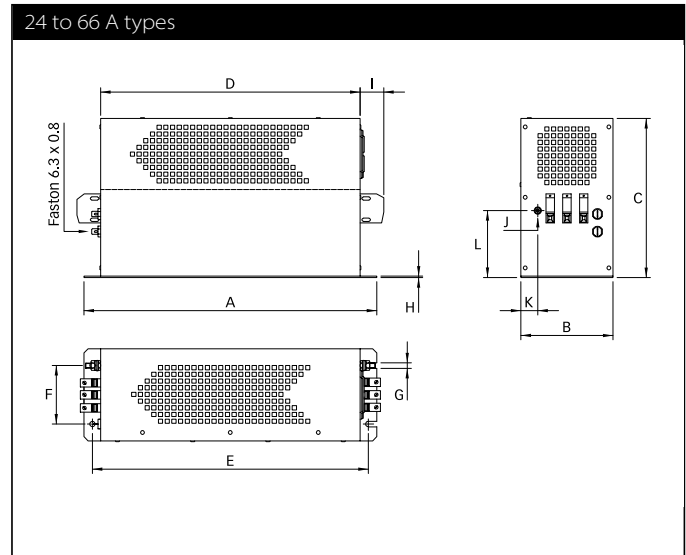

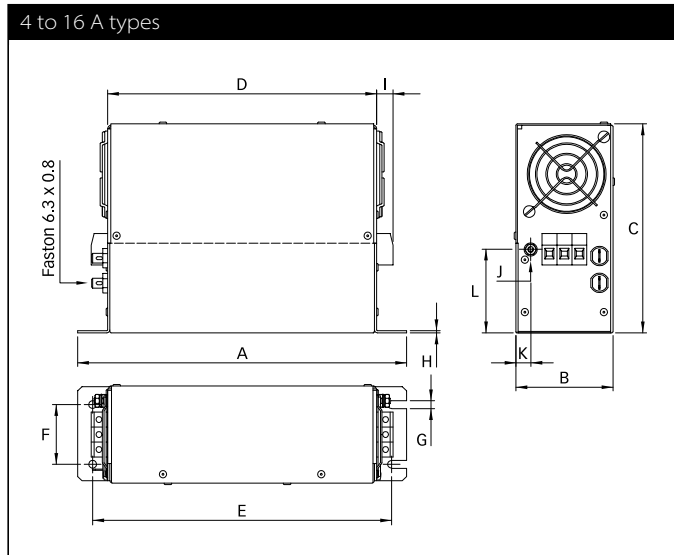

Possible application, e.g.:

50°C	16 kHz	50 m
40°C	16 kHz	80 m

Temperature monitoring function

The temperature monitoring device opens a potential-free contact in the case of filter overtemperature (>120°C). The maximum switching capability is 5 A/240 V. The switch can be used, for example, in the input of a CNC controller or as the trip of a circuit breaker in order to interrupt the mains power supply.
