

MAX7322 Evaluation Kit/Evaluation System

General Description

The MAX7322 evaluation kit (EV kit) is a fully assembled and tested printed circuit board (PCB) that demonstrates the capabilities of the MAX7322 I²C port expander with four push-pull outputs and four inputs. The MAX7322 EV kit also includes Windows® 98SE/2000/XP-compatible software, which provides a simple graphical user interface (GUI) for exercising the MAX7322's features.

The MAX7322 evaluation system (EV system) includes a MAX7322 EV kit and a Maxim CMAXQUSB serial-interface board.

The CMAXQUSB board connects to a PC's USB port and allows the transfer of I²C commands to the MAX7322 EV kit.

The EV kit comes with the MAX7322ATE+ installed. The MAX7322 EV kit can also be used to evaluate the MAX7319/MAX7320/MAX7321/MAX7323. Contact the factory for free samples of the pin-compatible MAX7319ATE+, MAX7320ATE+, MAX7321ATE+, or MAX7323ATE+ to evaluate these parts.

Windows is a registered trademark of Microsoft Corp.

Features

- ◆ 400kHz I²C/2-Wire Serial Interface
- ◆ 1.71V to 5.5V Operation Voltage
- ◆ 4 Push-Pull Output Ports Rated at 20mA Sink Current
- ◆ 4 Input Ports with Maskable, Latching Transition Detection
- ◆ Proven PCB Layout
- ◆ Windows 98SE/2000/XP-Compatible Evaluation Software
- ◆ Fully Assembled and Tested
- ◆ EV System: USB-to-PC Connection

Ordering Information

PART	TYPE	INTERFACE
MAX7322EVKIT+	EV kit	User-supplied I ² C interface
MAX7322EVCMAXQU+	EV system	CMAXQUSB board

+Denotes a lead-free and RoHS-compliant EV kit.

Note: The MAX7322 EV kit software is designed for use with the complete EV system. The EV system includes both the Maxim CMAXQUSB board and the EV kit. If the Windows software will not be used, the EV kit board can be purchased without the Maxim CMAXQUSB board.

Quick Start

Recommended Equipment

- MAX7322 EV system
MAX7322 EV kit
C MAXQUSB board
USB type A-B cable (included with C MAXQUSB)
- A user-supplied computer running Windows 98SE/2000/XP with a spare USB port

Note: In the following sections, software-related items are identified by bolding. Text in bold refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows 98SE/2000/XP operating system.

Procedure

The MAX7322 EV kit is fully assembled and tested. Follow the steps below to verify board operation:

- 1) Visit the Maxim website (www.maxim-ic.com/evkit-software) to download the latest version of the EV kit software, 7322Rxx.ZIP.
- 2) Install the MAX7322 evaluation software on your computer by running the INSTALL.EXE program. The program files are copied and icons are created in the Windows **Start** menu.
- 3) Enable the I²C pullup resistors on the C MAXQUSB board by setting the DIP switches on SW1 to the ON position.

- 4) For the MAX7322 EV kit, make sure that the shunts of all jumpers are in the following default positions:
 - JU1: (1-3) Combined with JU2 makes I²C address = 0xC0
 - JU2: (1-4) Combined with JU1 makes I²C address = 0xC0
 - JU3: (Open) Normal operation
 - JU4: (2-3) C MAXQUSB provides the power supply
- 5) Connect the boards by aligning the MAX7322 EV kit's 20-pin connector with the 20-pin connector of the C MAXQUSB board.
- 6) Connect the USB cable from the PC to the C MAXQUSB board. A **Building Driver Database** window pops up, in addition to a **New Hardware Found** message if this is the first time it is used on this PC. If you do not see a window that is similar to the one described above after 30s, remove the USB cable from the C MAXQUSB and reconnect it. Administrator privileges are required to install the USB device driver on Windows 2000/XP. Refer to the TROUBLESHOOTING_USB.PDF document included with the software if you have any problems during this step.
- 7) Follow the directions of the **Add New Hardware Wizard** to install the USB device driver. Choose the **Search for the best driver for your device** option. Specify the location of the device driver to be **C:\Program Files\MAX7322** (default installation directory) using the **Browse** button.
- 8) Start the MAX7322 EV kit software by opening its icon in the **Start** menu. The GUI main window appears, as shown in Figure 1.
- 9) Check or uncheck checkboxes **D0** and/or **D1** above the **Write** button. Press the **Write** button and observe the light change of the LEDs on the EV kit board.

MAX7322 Evaluation Kit/Evaluation System

Evaluate: MAX7322

Figure 1. MAX7322 Evaluation Software Main Window

Detailed Description of Software

To start the MAX7322 EV kit software, double click on the MAX7322 EV kit icon created during installation. The GUI main window appears, as shown in Figure 1.

There are three group boxes on the MAX7322 EV kit GUI software: **Ports**, **I²C Addresses**, and **Interrupt Status**. There are also three buttons on the EV kit GUI software: **Reconnect**, **Help**, and **Exit**.

Ports Group Box

The **Ports** group box shown in Figure 1 contains the read panel and write panel. The read panel consists of two sections: **Port Status** and **Flag Status**.

Pressing the **Single-byte Read** button only reads the port status. Pressing the **Two-byte Read** button reads both port status and flag status.

Check or uncheck the desired checkboxes in the write panel and press the **Write** button to write those settings to the hardware.

I²C Group Box

The **I²C Addresses** pulldown menu autodetects the MAX7322's I²C slave address when the GUI software starts. If multiple devices are connected to the I²C bus, the user can use this pulldown menu to manually change the device's I²C slave address according to the shunt position of JU1 and JU2, as shown in Table 1.

Interrupt Status Group Box

The **Interrupt Status** group box shows the current status of the MAX7322 INT pin, which reflects the latched transition detection of four input ports. Make sure the interrupt mask bits of the input ports are set properly.

Reconnect, Help, and Exit Buttons

Press the **Reconnect** button to reestablish the connection between the EV kit GUI software and MAX7322 EV kit hardware.

Press the **Help** button to show the MAX7322 EV kit software revision and Maxim's website information.

Press the **Exit** button to quit the MAX7322 EV kit GUI software.

MAX7322 Evaluation Kit/Evaluation System

Detailed Description of Hardware

The MAX7322 is an I²C port expander with four push-pull outputs and four inputs. The MAX7322 EV kit board provides a proven layout for evaluating the MAX7322. The EV kit comes with a MAX7322ATE+ installed.

Hardware-Reset Control

The hardware-reset function is controlled by jumper JU3, as shown in Table 2. Putting the shunt in the 1-2 position resets and disables the I²C interface.

I²C Address Configuration

The shunt-position combinations of jumpers JU1 and JU2 determine the I²C slave address of the MAX7322 EV kit. See Table 1 to select the appropriate setting.

Power Supplies

The MAX7322 EV kit can be powered from either the CMAXQUSB (2.5V, 3.3V, and 5V) or from a user-supplied 1.71V to 5.5V power supply connecting to VDD, as shown in Table 3.

If the user supplies the power supply, make sure the supplied voltage is compatible with the CMAXQUSB JU1 setting.

User-Supplied I²C Interface

To use the MAX7322 EV kit with a user-supplied I²C interface, install the shunt on jumper JU4's 1-2 position. Connect SDA, SCL, and GND lines from the user-supplied I²C interface to the SDA, SCL, and GND pads on the MAX7322 EV kit. Apply a 1.71V to 5.5V power supply to the VDD pad of the MAX7322 EV kit. Depending on the configuration of the user-supplied I²C interface, it may be necessary to install I²C pullup resistors R10 and R11.

Table 1. The I²C Address Configuration

SHUNT POSITION		I ² C ADDRESS
JU2	JU1	
1-4 (SCL)*	1-3 (GND)*	1100000x (0xC0)
1-4 (SCL)	1-2 (VCC)	1100001x (0xC2)
1-4 (SCL)	1-4 (SCL)	1100010x (0xC4)
1-4 (SCL)	1-5 (SDA)	1100011x (0xC6)
1-5 (SDA)	1-3 (GND)	1100100x (0xC8)
1-5 (SDA)	1-2 (VCC)	1100101x (0xCA)
1-5 (SDA)	1-4 (SCL)	1100110x (0xCC)
1-5 (SDA)	1-5 (SDA)	1100111x (0xCE)
1-3 (GND)	1-3 (GND)	1101000x (0xD0)
1-3 (GND)	1-2 (VCC)	1101001x (0xD2)
1-3 (GND)	1-4 (SCL)	1101010x (0xD4)
1-3 (GND)	1-5 (SDA)	1101011x (0xD6)
1-2 (VCC)	1-3 (GND)	1101100x (0xD8)
1-2 (VCC)	1-2 (VCC)	1101101x (0xDA)
1-2 (VCC)	1-4 (SCL)	1101110x (0xDC)
1-2 (VCC)	1-5 (SDA)	1101111x (0xDE)

*Default position.

Table 2. Reset Jumper Configuration

JUMPER	SHUNT POSITION	DESCRIPTION
JU3	1-2	Reset
	Open*	Normal operation

*Default position.

Table 3. V+ Selection Configuration

JUMPER	SHUNT POSITION	DESCRIPTION
JU4	1-2	User-provided 1.71V to 5.5V power supply (VDD)
	2-3*	Powered by CMAXQUSB

*Default position.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
