

60 W 19 V SMPS demo board with ICE5GSAG and IPA80R650CE

DEMO_5GSAG_60W1

About this document

Scope and purpose

This document is an engineering report that describes a universal-input 60 W 19 V off-line flyback converter using the latest 5th generation Infineon Fixed Frequency Controller (FFC) [ICE5GSAG](#) and CoolMOS™ [IPA80R650CE](#). It offers high-efficiency, low-standby power with selectable entry and exit standby power options, a wide V_{CC} operating range with fast start-up, robust line protection with input Over Voltage Protection (OVP) and various modes of protection for a highly reliable system. This demo board is designed for users who wish to evaluate ICE5GSAG and IPA80R650CE in terms of optimized efficiency, thermal and EMI performance.

Intended audience

This document is intended for power-supply design/application engineers, students, etc., who wish to design low-cost and highly reliable systems of off-line SMPS, such as auxiliary power supplies for white goods, PCs, servers and TVs, or enclosed adapters for blu-ray players, set-top boxes, games consoles, etc.

Abstract

1 Abstract

This is an engineering report for a 60 W 19 V demo board designed in a fixed frequency flyback converter topology using the fifth-generation FFC, ICE5GSAG, and a CE series of HV CoolMOS™, IPA80R650CE. The demo board is operated in Discontinuous Conduction Mode (DCM) and is running at 125 kHz fixed switching frequency. The frequency reduction with soft-gate driving and frequency jittering offers lower EMI and better efficiency from light loads up to 50% load. The selectable Active Burst Mode (ABM) power enables ultra-low power consumption. In addition, numerous adjustable protection functions have been implemented in ICE5GSAG to protect the system and customize the IC for the chosen application. In case of failure modes, like line over-voltage, V_{CC} over-/under-voltage, open control-loop or over-load, over-temperature, V_{CC} short-to-GND and CS short-to-GND, the device enters protection mode. By means of the cycle-by-cycle peak current Limitation (PCL), the dimensions of the transformer and the current rating of the secondary diode can both be optimized. Thus, a cost-effective solution can easily be achieved. The target applications of ICE5GSAG are either auxiliary power supplies for white goods, PCs, servers and TVs, or enclosed adapters for Blu-ray players, set-top boxes, games consoles, etc.

Demo board

2 Demo board

This document contains the list of features, the power supply specifications, schematics, Bill of Materials (BOM) and the transformer construction documentation. Typical operating characteristics such as performance curve and scope waveforms are shown at the end of the report.

Figure 1 DEMO_5GSAG_60W1

Specifications of demo board

3 Specifications of demo board

Table 1 Specifications of DEMO_5GSAG_60W1

Input voltage and frequency	85 V AC (60 Hz)~300 V AC (50 Hz)
Output voltage, current and power	19 V x 3.16 A = 60 W
Dynamic load response (load change from 10% to 100%, slew rate at 1.5 A/ μ s, 100 Hz)	$\pm 5\%$ of nominal output voltage
Output ripple voltage (full-load, 85 V AC~300 V AC)	19 V _{ripple_p_p} < 200 mV
Active mode four-point average efficiency (25%, 50%, 75%, 100% load)	> 86% at 115 V AC and 230 V AC
No-load power consumption	< 100 mW at 230 V AC
Conducted emissions (EN 55022 class B)	Pass with 7 dB margin for 115 V AC and 230 V AC
ESD immunity (EN 61000-4-2)	Special level (± 10 kV for both contact and air discharge)
Surge immunity (EN 61000-4-5)	Installation class 4 (± 2 kV for line-to-line and ± 4 kV for line-to-earth)
Form factor case size (L x W x H)	(144 x 73 x 43) mm ³

Circuit description

4 Circuit description

4.1 Line input

The AC-line input side comprises the input fuse F1 as over-current protection. The choke L1, X-capacitor CX1 and Y-capacitor CY1 act as EMI suppressors. Optional spark-gap devices SA1, SA2 and varistor VAR can absorb HV stress during a lightning surge test. A rectified DC voltage (120~424 V DC) is obtained through the bridge rectifier BR1 together with the bulk capacitor C3.

4.2 Start-up

To achieve fast and safe start-up, ICE5GSAG is implemented with start-up resistor and V_{CC} short-to-GND protection. When V_{VCC} reaches the turn-on voltage threshold 16 V, the IC begins with a soft-start. The soft-start implemented in ICE5GSAG is a digital time-based function. The preset soft-start time is 12 ms with four steps. If not limited by other functions, the peak voltage on the CS pin will increase in increments from 0.3 V to 1 V. After IC turn-on, the V_{CC} voltage is supplied by auxiliary windings of the transformer. V_{CC} short-to-GND protection is implemented during the start-up time.

4.3 PWM control with frequency reduction and switching MOSFET

The PWM pulse is generated by the 5th generation FFC ICE5GSAG. The new controller can be operated in either DCM or Continuous Conduction Mode (CCM) with frequency reduction mode to achieve the overall average efficiency. This demo board is designed to operate in DCM.

When the system is operating at maximum power, the controller will switch at the fixed frequency of 125 kHz. In order to achieve a better efficiency between light and medium loads, frequency reduction is implemented, and the reduction curve is shown in Figure 2. The V_{CS} is clamped by the current limitation threshold or by the PWM op amp while the switching frequency is reduced. After the maximum frequency reduction, the minimum switching frequency is f_{OSC2_MIN} (53 KHz).

Figure 2 Frequency reduction curve

Circuit description

Figure 3 Frequency reduction curve of DEMO_5GSAG_60W1

The measured frequency reduction curve of DEMO_5GSAG60W1 is shown in Figure 3.

The PWM pulse drives the HV power MOSFET, IPA80R650CE. The CoolMOS™ provides all the benefits of a fast-switching superjunction (SJ) MOSFET while not sacrificing ease of use. It achieves extremely low conduction and switching losses, and can make switching applications more efficient, more compact, lighter and cooler. Details about the information mentioned above are illustrated in the product datasheet.

4.4 Frequency jittering

The ICE5GSAG has a frequency jittering feature to reduce the EMI noise. The jitter frequency is internally set at 125 kHz (± 5 kHz) and the jitter period is 4 ms.

4.5 RCD clamper circuit

A clamper network (R4A, R4B, C2 and D1) dissipates the energy of the leakage inductance and suppresses ringing on the SMPS transformer.

4.6 Output stage

On the secondary side the power is coupled out by Schottky diode D4. The capacitors C9A and C9B provide energy buffering, following with the LC filters L2 and C10 to reduce the output voltage ripple considerably. Storage capacitors C9A and C9B are selected to have a very small internal resistance (ESR) to minimize the output voltage ripple.

4.7 Feedback loop

For feedback (FB), the output is sensed by the voltage divider of R15, R16A and R16B and compared to the IC3 (TL431) internal reference voltage. C7, C6 and R14 comprise the compensation network. The output voltage of IC3 (TL431) is converted to the current signal via optocoupler IC2 and two resistors, R12 and R13, for regulation control.

Circuit description

4.8 Active Burst Mode (ABM)

ABM entry and exit power can be selected from three options, including no ABM. This demo board is set to level 3, and details are shown in the product datasheet. Under light load conditions, the SMPS enters ABM. At this stage, the controller is always active but the V_{VCC} must be kept above the switch-off threshold. During ABM, the efficiency increases significantly and at the same time it supports low ripple on V_{out} and fast response on load-jump.

For determination of entering ABM operation, two conditions apply:

1. The FB voltage is lower than the threshold of V_{FB_EBXP} , and
2. A certain blanking time ($t_{FB_BEB}=36$ ms) is required

Once both of these conditions are fulfilled, the ABM flip-flop is set and the controller enters ABM operation. This dual-condition determination for entering ABM operation prevents mis-triggering of ABM, so that the controller enters ABM operation only when the output power is really low during the preset blanking time.

During ABM, switching frequency is reduced to 103 kHz for level 2 and 3 selections and 53 kHz for level 1 (no ABM) to improve the efficiency during standby power measurement. The maximum Current Sense (CS) voltage is reduced from V_{CS_N} to V_{CS_BXP} to reduce the conduction loss and the audible noise. In ABM, the FB voltage changes like a sawtooth between $V_{FB_Bon_ISO}$ and $V_{FB_Boff_ISO}$.

The FB voltage immediately increases if there is a high load-jump. This is observed by one comparator. As the current limit is 27/33% during ABM a certain load is needed so that FB voltage can exceed V_{FB_LB} (2.75 V). After leaving ABM, maximum current can now be provided to stabilize V_{out} .

Protection features

5 Protection features

Protection is one of the major factors in determining whether the system is safe and robust – therefore sufficient protection is necessary. ICE5GSAG provides comprehensive protection to ensure the system is operating safely. This includes line over-voltage, V_{CC} over-voltage and under-voltage, over-load, over-temperature (controller junction), CS short-to-GND and V_{CC} short-to-GND. When those faults are found, the system will go into protection mode. Once the fault is removed, the system resumes normal operation. A list of protections and failure conditions are shown in the table below.

Table 2 Protection functions of ICE5GSAG

Protection function	Failure condition	Protection mode
Line over-voltage	$V_{VIN} > 2.9 \text{ V}$	Non-switch auto restart
V _{CC} over-voltage	$V_{VCC} > 25.5 \text{ V}$	Odd-skip auto restart
V _{CC} under-voltage	$V_{VCC} < 10 \text{ V}$	Auto restart
Over-load	$V_{FB} > 2.75 \text{ V}$ and lasts for 54 ms	Odd-skip auto restart
Over-temperature (junction temperature of controller chip only)	$T_J > 140^\circ\text{C}$	Non-switch auto restart
CS short-to-GND	$V_{CS} < 0.1 \text{ V}$ and lasts for 0.4 μs and 3 consecutive pulses	Odd-skip auto restart
V _{CC} short-to-GND ($V_{VCC} = 0 \text{ V}$, $R_{\text{Start-up}} = 50 \text{ M}\Omega$ and $V_{\text{DRAIN}} = 90 \text{ V}$)	$V_{VCC} < 1.2 \text{ V}$, $I_{VCC_Charge1} \approx -0.27 \text{ mA}$	Cannot start up

Test results

10.6 ESD immunity (EN 61000-4-2)

Pass EN 61000-4-2 special level (± 10 kV for both contact and air discharge).

10.7 Surge immunity (EN 61000-4-5)

Pass EN 61000-4-5 installation class 4 (± 2 kV for line-to-line and ± 4 kV for line-to-earth).¹

10.8 Conducted emissions (EN 55022 class B)

The conducted EMI was measured by Schaffner (SMR4503) and followed the test standard of EN 55022 (CISPR 22) class B. The demo board was set up at maximum load (60 W) with input voltage of 115 V AC and 230 V AC.

Pass conducted emissions EN 55022 (CISPR 22) class B with 7 dB margin for quasi peak measurement at low-line (115 V AC) and high-line (230 V AC).

10.9 Thermal measurement

The thermal test of the open-frame demo board was done using an infrared thermography camera (FLIR-T62101) at an ambient temperature of 25°C. The measurements were taken after one hour running at full-load.

Table 5 Hottest temperature of demo board

No.	Major component	85 V AC (°C)	300 V AC (°C)

C2 (purple) : Supply voltage (V_{VCC})

C3 (blue) : FB voltage (V_{FB})

C3 (blue) : FB voltage (V_{FB})

C4 (green) : CS voltage (V_{CS})

C4 (green) : CS voltage (V_{CS})

Condition to enter ABM level 1: $V_{FB} < 1.05$ V and $t_{blanking} = 36$ ms
(load change from full-load to 1 W load at 85 V AC)

Condition to enter ABM level 1: $V_{FB} < 1.05$ V and $t_{blanking} = 36$ ms
(load change from full-load to 1 W load at 300 V AC)

Figure 25 Entering ABM

Waveforms and scope plots

11.9 During ABM

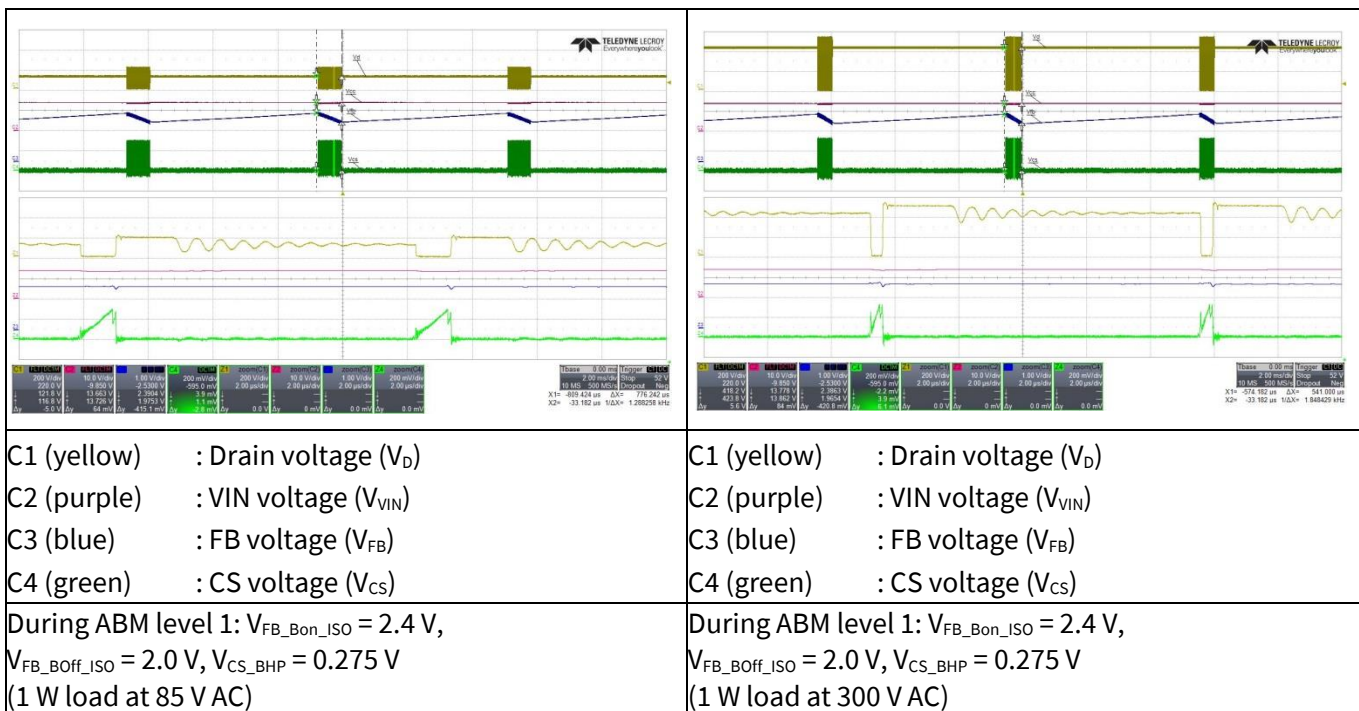

Figure 26 During ABM

11.10 Leaving ABM

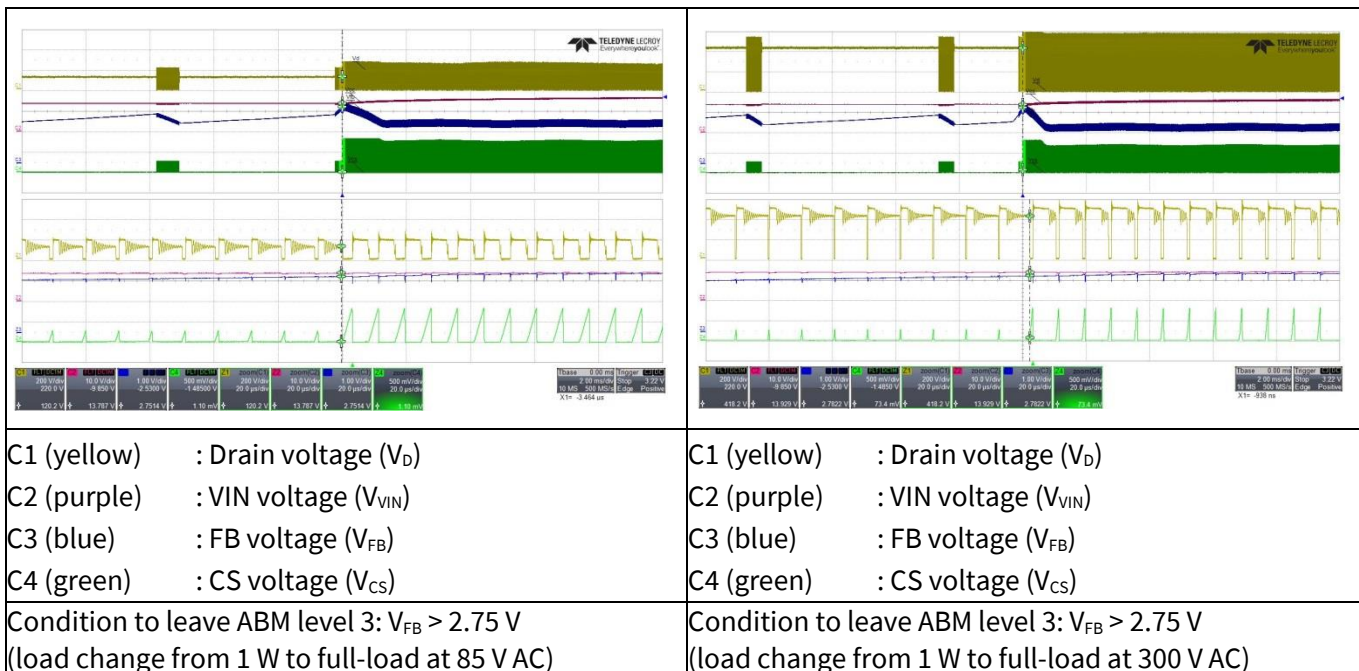

Figure 27 Leaving ABM

Waveforms and scope plots

11.11 Line OVP (non-switch auto restart)

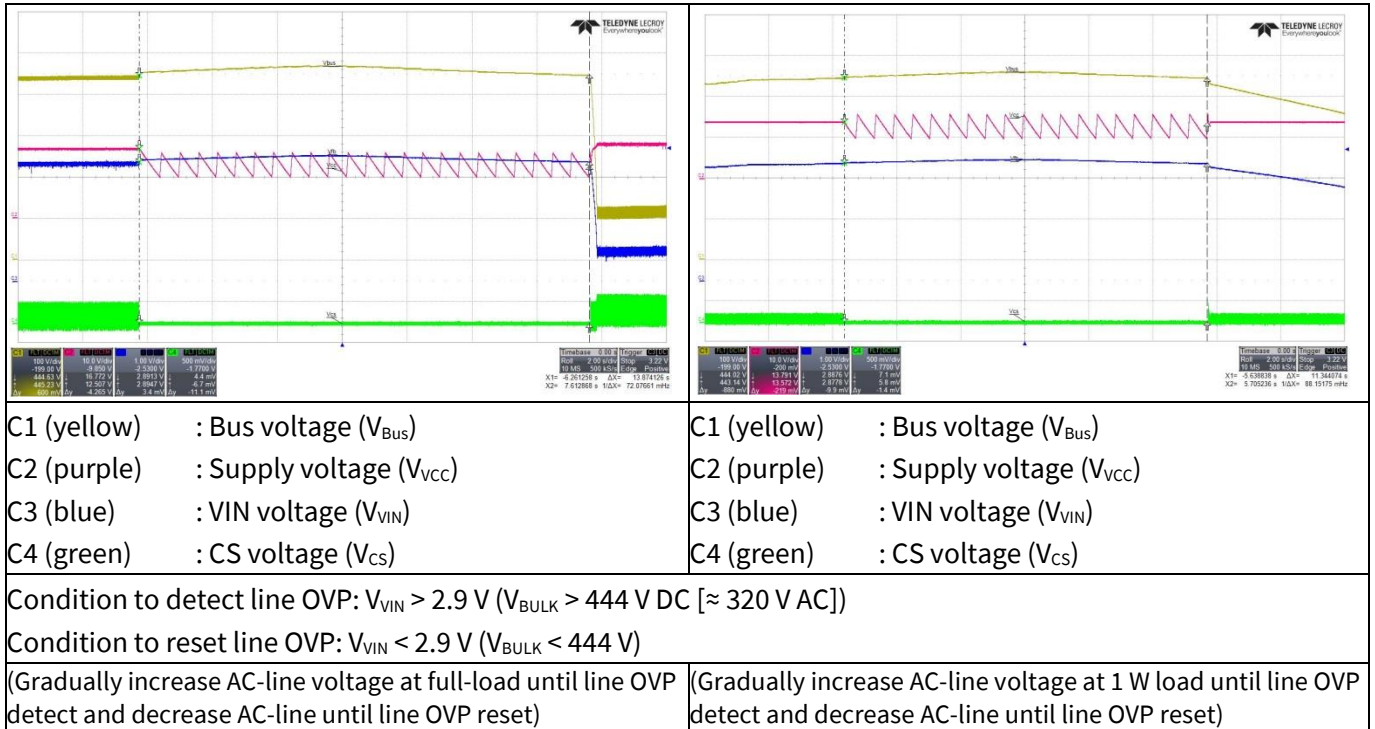

Figure 28 Line OVP

11.12 V_{CC} OVP (odd-skip auto restart)

- C1 (yellow) : Drain voltage (V_D)
- C2 (purple) : Supply voltage (V_{VCC})
- C3 (blue) : FB voltage (V_{FB})
- C4 (green) : CS voltage (V_{CS})

Condition to enter V_{CC} OVP: $V_{VCC} > 25.5\text{ V}$
 (short R16A while system operating at 85 V AC and no-load)

Figure 29 V_{CC} OVP

Waveforms and scope plots

11.13 V_{CC} under-voltage protection (auto restart)

- C1 (yellow) : Drain voltage (V_D)
- C2 (purple) : Supply voltage (V_{CC})
- C3 (blue) : FB voltage (V_{FB})
- C4 (green) : CS voltage (V_{CS})

Condition to enter V_{CC} under-voltage protection: $V_{CC} < 10$ V
 (Remove R5 and power on the system with full-load at 85 V AC)

Figure 30 V_{CC} under voltage protection

11.14 Over-load protection (odd-skip auto restart)

- C1 (yellow) : Drain voltage (V_D)
- C2 (purple) : Supply voltage (V_{CC})
- C3 (blue) : FB voltage (V_{FB})
- C4 (green) : CS voltage (V_{CS})

Condition to enter over-load protection: $V_{FB} > 2.75$ V and lasts for 54 ms blanking time
 (load change from full- to short-load at 85 V AC)

Figure 31 Over-load protection

Waveforms and scope plots

11.15 V_{CC} short-to-GND protection

- C1 (yellow) : Drain voltage (V_D)
- C2 (purple) : V_{CC} voltage (V_{CC})
- C3 (blue) : FB voltage (V_{FB})
- C4 (green) : V_{IN} voltage (V_{IN})

Condition to enter V_{CC} short-to-GND: if $V_{CC} < V_{VCC_SCP} \rightarrow I_{VCC} = I_{VCC_Charge1}$
 (Short V_{CC} pin-to-GND and measure the current with multimeter before system start-up, $I_{VCC} \approx 300 \mu A$ and input power is $\approx 40 mW$ at 85 V AC)

Figure 32 V_{CC} short-to-GND protection

IMPORTANT NOTICE

The information contained in this application note is given as a hint for the implementation of the product only and shall in no event be regarded as a description or warranty of a certain functionality, condition or quality of the product. Before implementation of the product, the recipient of this application note must verify any function and other technical information given herein in the real application. Infineon Technologies hereby disclaims any and all warranties and liabilities of any kind (including without limitation warranties of non-infringement of intellectual property rights of any third party) with respect to any and all information given in this application note.

The data contained in this document is exclusively intended for technically trained staff. It is the responsibility of customer's technical departments to evaluate the suitability of the product for the intended application and the completeness of the product information given in this document with respect to such application.

For further information on the product, technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies office (www.infineon.com).

WARNINGS

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

Except as otherwise explicitly approved by Infineon Technologies in a written document signed by authorized representatives of Infineon Technologies, Infineon Technologies' products may not be used in any applications where a failure of the product or any consequences of the use thereof can reasonably be expected to result in personal injury.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

JONHON

«**JONHON**» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
