## Dual Supply Octal Translating Transceiver

### with 3-State Outputs

The 74LVX4245 is a 24-pin dual-supply, octal translating transceiver that is designed to interface between a 5.0 V bus and a 3.0 V bus in a mixed 3.0 V / 5.0 V supply environment such as laptop computers using a 3.3 V CPU and 5.0 V LCD display. The A port interfaces with the 5V bus; the B port interfaces with the 3.0 V bus.

The Transmit/Receive ( $T/\bar{R}$ ) input determines the direction of data flow. Transmit (active-High) enables data from the A port to the B port. Receive (active-Low) enables data from the B port to the A port. The Output Enable ( $\overline{OE}$ ) input, when High, disables both A and B ports by placing them in 3-State.

#### Features

- Bi-directional Interface Between 5.0 V and 3.0 V Buses
- Control Inputs Compatible with TTL Level
- 5.0 V Data Flow at A Port and 3.0 V Data Flow at B Port
- Outputs Source/Sink 24 mA at 5.0 V Bus and 12 mA at 3.0 V Bus
- Guaranteed Simultaneous Switching Noise Level and Dynamic Threshold Performance
- Available in SOIC and TSSOP Packages
- Functionally Compatible with the 74 Series 245
- These Devices are Pb-Free and are RoHS Compliant

## ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Condition	Unit
$V_{CCA}, V_{CCB}$	DC Supply Voltage	-0.5 to +7.0		V
$V_I$	DC Input Voltage	$\overline{OE}, T/R$	-0.5 to $V_{CCA} + 0.5$	V
$V_{I/O}$	DC Input/Output Voltage	An	-0.5 to $V_{CCA} + 0.5$	V
		Bn	-0.5 to $V_{CCB} + 0.5$	V
$I_{IK}$	DC Input Diode Current	$\overline{OE}, T/R$	$\pm 20$	$V_I < GND$ mA
$I_{OK}$	DC Output Diode Current		$\pm 50$	$V_O < GND; V_O > V_{CC}$ mA
$I_O$	DC Output Source/Sink Current		$\pm 50$	mA
$I_{CC}, I_{GND}$	DC Supply Current	Per Output Pin Maximum Current at $I_{CCA}$ Maximum Current at $I_{CCB}$	$\pm 50$ $\pm 200$ $\pm 100$	mA
$T_{STG}$	Storage Temperature Range		-65 to +150	°C
Latchup	DC Latchup Source/Sink Current		$\pm 300$	mA

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

## RECOMMENDED OPERATING CONDITIONS

## MC74LVX4245

### Dual Supply Octal Translating Transceiver

The 74LVX4245 is a dual-supply device well capable of bidirectional signal voltage translation. This level shifting ability provides an excellent interface between low voltage CPU local bus and a standard 5.0 V I/O bus. The device control inputs can be controlled by either the low voltage CPU and core logic or a bus arbitrator with 5.0 V I/O levels.

The LVX4245 is ideal for mixed voltage applications such as notebook computers using a 3.3 V CPU and 5.0 V peripheral devices.

### Applications:

#### Mixed Mode Dual Supply Interface Solutions

The LVX4245 is designed to solve 3.0 V / 5.0 V interfaces when CMOS devices cannot tolerate I/O levels above their applied  $V_{CC}$ . If an I/O pin of a 3.0 V device is driven by a 5.0 V device, the P-Channel transistor in the 3.0 V device will conduct – causing current flow from the I/O bus to the 3.0 V power supply. The result may be destruction of the 3.0 V device through latchup effects. A current limiting resistor may be used to prevent destruction, but it causes speed degradation and needless power dissipation.

A better solution is provided in the LVX4245. It provides two different output levels that easily handle the dual voltage interface. The A port is a dedicated 5.0 V port; the B port is a dedicated 3.0 V port.

Since the LVX4245 is a '245 transceiver, the user may either use it for bidirectional or unidirectional applications. The center 20 pins are configured to match a '245 pinout. This enables the user to easily replace this level shifter with a 3.0 V '245 device without additional layout work or re-manufacture of the circuit board (when both buses are 3.0 V).

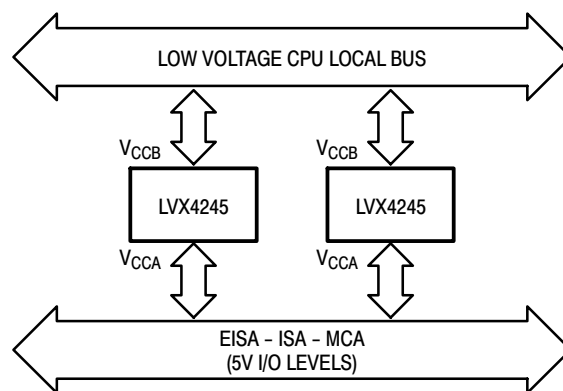

Figure 3. 3.3V/5V Interface Block Diagram

### Powering Up the LVX4245

When powering up the LVX4245, please note that if the  $V_{CCB}$  pin is powered-up well in advance of the  $V_{CCA}$  pin, several milliamps of either  $I_{CCB}$  or  $I_{CCB}$  current will result. If the  $V_{CCA}$  pin is powered-up in advance of the  $V_{CCB}$  pin then only nanoamps of  $I_{CC}$  current will result. In actuality the  $V_{CCB}$  can be powered “slightly” before the  $V_{CCA}$  without the current penalty, but this “setup time” is dependent on the power-up ramp rate of the  $V_{CC}$  pins. With a ramp rate of approximately 50 mV/ns (50V/ $\mu$ s) a 25 ns setup time was observed ( $V_{CCB}$  before  $V_{CCA}$ ). With a 7.0 V/ $\mu$ s rate, the setup time was about 140ns. When all is said and done, the safest powerup strategy is to simply power  $V_{CCA}$  before  $V_{CCB}$ . One more note: if the  $V_{CCB}$  ramp rate is faster than the  $V_{CCA}$  ramp rate then power problems might still occur, even if the  $V_{CCA}$  powerup began prior to the  $V_{CCB}$  powerup.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
