ACE

- \*1 Operating condition of peak current : Peak current is less than 10sec, duty is less than 35% and average current is less than rated current. (rated current2 at Module W, Z, 9, Q and V)
- \*2 Measured by 20MHz oscilloscope or Ripple-Noise meter (Equivalent to KEISOKU-GIKEN : RM101). Ripple and Ripple Noise is measured by using measuring board with capacitor of 22 μF within 150mm from output terminal.
- \*3 Drift is changed in DC output for an eight hour period after half-hour warm-up at 25°C, with the input voltage held constant at the rated input/output.
- \*4 When the output voltage of module A is used less than 2.0V, keep minimum output current 2.6A.
- \*5 It is a value from 0 to rated output current1. The current on non-measurement side is fixed.
- \*6 It is a value from 0 to rated output current2. The current on non-measurement side is fixed.
- \*7 The sum of +power and -power must be less than output power(Y:50W, W:76.8W, Z:75W, 9:76.8W, Q:153.6W, V:165W).

- \*8 Ratings of V2 can draw up to 50% of rated current at the time of 0A in load of V1. (Only module S,T,U. refer to instruction manual 4.2 for details.)
- \* Each output of module Y-Z, 9, Q and V is a ground common type (not isolated), each output of module S,T and U is isolated.
- \* For ACE300F,450F and 650F , input and output terminals can be set at the same side if Input module (code:I) is installed instead of the most left module.
- \* Modules which can correspond to medical electrical equipment (UL2601-1, EN60601-1) are all modules except module S, T and U. Refer to instruction manual 7. for details.
