## 2.5V / 3.3V Differential 4:1 Mux to 1:2 CML Clock/Data Fanout / Translator

### Multi-Level Inputs w/ Internal Termination

#### Description

The NB6L572M is a high performance differential 4:1 Clock / Data input multiplexer and a 1:2 CML Clock / Data fanout buffer that operates up to 6 GHz / 8 Gbps respectively with a 2.5 V or 3.3 V power supply.

The differential Clock / Data inputs have internal 50  $\Omega$  termination resistors and will accept differential LVPECL, CML, or LVDS logic levels. The NB6L572M incorporates a pair of Select pins that will choose one of four differential inputs and will produce two identical CML output copies of Clock or Data.

As such, the NB6L572M is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock/Data distribution applications.

The two differential CML outputs will swing 400 mV when externally loaded and terminated with a 50  $\Omega$  resistor to  $V_{CC}$  and are optimized for low skew and minimal jitter.

The NB6L572M is offered in a low profile 5x5mm 32-pin QFN Pb-Free package. Application notes, models, and support documentation are available at [www.onsemi.com](http://www.onsemi.com). The NB6L572M is a member of the ECLinPS MAX™ family of high performance clock products.
