

NB3V8312C

Ultra-Low Jitter, Low Skew 1:12 LVCMOS/LVTTL Fanout Buffer

The NB3V8312C is a high performance, low skew LVCMOS fanout buffer which can distribute 12 ultra-low jitter clocks from an LVCMOS/LVTTL input up to 250 MHz.

The 12 LVCMOS output pins drive 50 Ω series or parallel terminated transmission lines. The outputs can also be disabled to a high impedance (tri-stated) via the OE input, or enabled when High.

The NB3V8312C provides an enable input, CLK_EN pin, which synchronously enables or disables the clock outputs while in the LOW state. Since this input is internally synchronized to the input clock, changing only when the input is LOW, potential output glitching or runt pulse generation is eliminated.

Separate V_{DD} core and V_{DDO} output supplies allow the output buffers to operate at the same supply as the V_{DD} ($V_{DD} = V_{DDO}$) or from a lower supply voltage. Compared to single-supply operation, dual supply operation enables lower power consumption and output-level compatibility.

The V_{DD} core supply voltage can be set to 3.3 V, 2.5 V or 1.8 V, while the V_{DDO} output supply voltage can be set to 3.3 V, 2.5 V, or 1.8 V, with the constraint that $V_{DD} \geq V_{DDO}$.

This buffer is ideally suited for various networking, telecom, server and storage area networking, RRU LO reference distribution, medical and test equipment applications.

Features

- Power Supply Modes:
 V_{DD} (Core) / V_{DDO} (Outputs)
3.3 V / 3.3 V
3.3 V / 2.5 V
3.3 V / 1.8 V
2.5 V / 2.5 V
2.5 V / 1.8 V
1.8 V / 1.8 V
- 250 MHz Maximum Clock Frequency
- Accepts LVCMOS, LVTTL Clock Inputs
- LVCMOS Compatible Control Inputs
- 12 LVCMOS Clock Outputs
- Synchronous Clock Enable
- Output Enable to High Z State Control
- 150 ps Max. Skew Between Outputs
- Temp. Range -40°C to $+85^{\circ}\text{C}$
- 32-pin LQFP and QFN Packages
- These are Pb-Free Devices

Applications

- Networking
- Telecom
- Storage Area Network

End Products

- Servers
- Routers
- Switches

NB3V8312C

Figure 5. Typical Phase Noise Plot at $f_{\text{carrier}} = 100 \text{ MHz}$ at an Operating Voltage of 3.3 V, Room Temperature

The above phase noise data was captured using Agilent E5052A/B. The data displays the input phase noise and output phase noise used to calculate the additive phase jitter at a specified integration range. The RMS Phase Jitter contributed by the device (integrated between 12 kHz and 20 MHz) is 29.8 fs.

The additive phase jitter performance of the fanout buffer is highly dependent on the phase noise of the input source.

To obtain the most accurate additive phase noise measurement, it is vital that the source phase noise be

notably lower than that of the DUT. If the phase noise of the source is greater than the device under test output, the source noise will dominate the additive phase jitter calculation and lead to an artificially low result for the additive phase noise measurement within the integration range. The Figure above is a good example of the NB3V8312C source generator phase noise having a significantly higher floor such that the DUT output results in an additive phase jitter of 29.8 fs.

$$\text{RMS additive jitter} = \sqrt{\text{RMS phase jitter of output}^2 - \text{RMS phase jitter of input}^2}$$

$$29.8 = \sqrt{202.73 \text{ fs}^2 - 200.53 \text{ fs}^2}$$

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
