

CAT4237 High Voltage White LED Driver Evaluation Board User's Manual

CAT4237EVAL2EVB

The board also demonstrates the CAT4237 shutdown mode and LED brightness control by using an external PWM signal or DC voltage. Resistors R3 and R5 (R5 – soldered on board by the user) are used to adjust the LED current using the dimming control with an external applied DC voltage on the FB pin. The ON/OFF operation and dimming control can be selected using the jumper options for the J1 connector.

Test points T1 to T10 are available to apply the external voltages/signal generator or to measure the output voltages/signals provided by CAT4237.

The component placement and the board picture are shown in Figure 2. Table 1 presents the component list for this evaluation board.

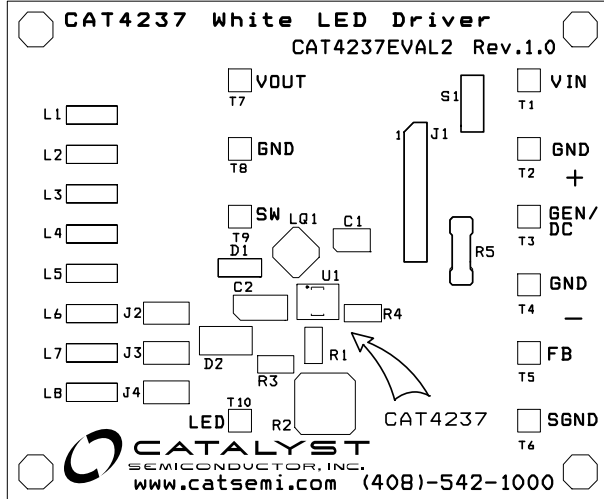

Figure 2. CAT4237EVAL2 Board

Table 1. CAT4237EVAL2 EVAL BOARD LIST OF COMPONENTS

Name	Manufacturer	Description Part	Number	Units
U1	Catalyst	CMOS White LED Driver, TSOT23 – 5-pin	CAT4237TSI	1
C1	Taiyo Yuden (or Panasonic)	Ceramic Capacitor 4.7 μ F/6.3 V, X5R, Size 0805	JMK212BJ475 (or Digi-Key PCC2315CT-ND)	1
C2	Taiyo Yuden (or Kemet)	Ceramic Capacitor 0.22 μ F/50 V, X5R(X7R)	(C1206C224K5RACTU)	1
L1	Sumida (or TDK)	Inductor 33 μ H, Low DCR, High Current	CDRH3D16-330 or VLCF4018T-330MR42-2	1
D1	Central	Schottky Diode, Low VF, High Current, SOD-323	CMDSH05-4	1
R1	Yageo	SMT Resistor 1/16 W, 6.81 Ω , 0603	Digi-Key 311-6.81HCT-ND	1
R2	Bourns	Trimmer Pot, 1/4", 100 Ω	3329W-101-ND (or equiv)	1
R3	Yageo	SMT Resistor 1/16 W, 1.0 k Ω , 0603	Digi-Key 311-1.0KHCT-ND	1
R4	Yageo	SMT Resistor 1/16 W, 200 Ω , 0603	Digi-Key 311-200KHCT-ND	1
R5	Yageo	Metal Film Resistor 1/16 W, 10 k Ω (Not Soldered on Board)	Digi-Key 10.0KXBK-ND	1
L1 to L8	Nichia	White LED, SMT	NSCW100 or NSCW335	8
J1		6-pin Header Connector, 0.1", Single Strip"	Digi-Key S1012-06-ND (or equiv)	1
J2 to J4		2-pin Header Connector, 0.1", Single Strip"	Digi-Key S1012-02-ND (or equiv)	3
T1 to T10		Pin Receptacle (Test Points)	#0149-0-15-01-30-14-04-0 (or equiv)	10

CAT4237EVAL2EVB

CAT4237 EVALUATION

The CAT4237EVAL2 gives the user a way to evaluate the CAT4237 in a typical application of driving multiple LEDs. The user can connect 6 to 8 LEDs in series to the CAT4237 output, using the jumper options for J2, J3 or J4 header-pin connectors. The following steps are an example of how the user can evaluate the CAT4237 white LED driver:

Driving 8 LEDs in Series and Shutdown Mode

1. Connect the 8-LEDs string to the CAT4237 output using a jumper shunt on J4 header-pin connector (J2, J3 not jumpered)
2. Set the R2 potentiometer to the middle position
3. Apply the external voltage supply, V_{EXT} ($3.0\text{ V} < V_{IN} < 5\text{ V}$) between VIN (T1) and GND (T2)
4. The CAT4237 is in the shutdown mode (SHDN pin is connected to GND) if the J1 connector is not jumpered
 - Connect a current meter between VEXT and VIN pad to measure the shutdown current: $I_{SD} < 1\text{ }\mu\text{A}$
 - In this mode of operation the LEDs are disconnected from the output: LEDs are OFF
5. Connect SHDN pin of the CAT4237 to VIN using a jumper shunt between Pin #1 and Pin #2 of J1 connector
 - Observe that LEDs are ON

LED Current Evaluation

Programming LED Current

LED current is programmed using the external resistors, $R_{SET} = R1 + R2$, connected to the FB pin. The voltage at the FB pin is internally regulated to the value $V_{FB} = 300\text{ mV} \pm 15\text{ mV}$.

The current into the LED pin can be set according to the following equation:

$$I_{LED}(mA) = V_{FB}(mV)/R_{SET}(\Omega) = V_{FB}/(R1 + R2)$$

1. Set the input voltage: ex. $V_{IN} = 3.6\text{ V}$
2. Disconnect the jumper from the J4 connector and insert a current meter between these pins to monitor the LED current, I_{LED}
3. Rotate the potentiometer R2 and observe the I_{LED} value on the current meter. The current can be adjusted between 3 mA and 30 mA, approximately. Various LED current values and the associated RSET values are listed below:

$I_{LED}(mA)$	5	10	15	20	25	30
$R_{SET}(\Omega)$	59	29.8	20	15	12	10

4. Monitor the voltage on FB (T5), VOUT (T7), and SW (T9)
5. Verify the internal switch frequency ($f_{sw} = 1.0\text{ MHz}$ – typically) using a scope probe connected on SW (T9) test point (GND = T8)

Figure 3 shows the internal switch output, V_{SW} (DC coupled, 10 V/div) and the regulated voltage on FB pin, V_{FB} (DC, 500 mV/div) for $V_{IN} = 3.6\text{ V}$, $I_{LED} = 20\text{ mA}$, 8 LEDs in series connected to the CAT4237 output.

Figure 4 shows the V_{OUT} (CH2, AC coupled at 100 mV/div) against V_{SW} (CH1).

CAT4237EVAL2EVB

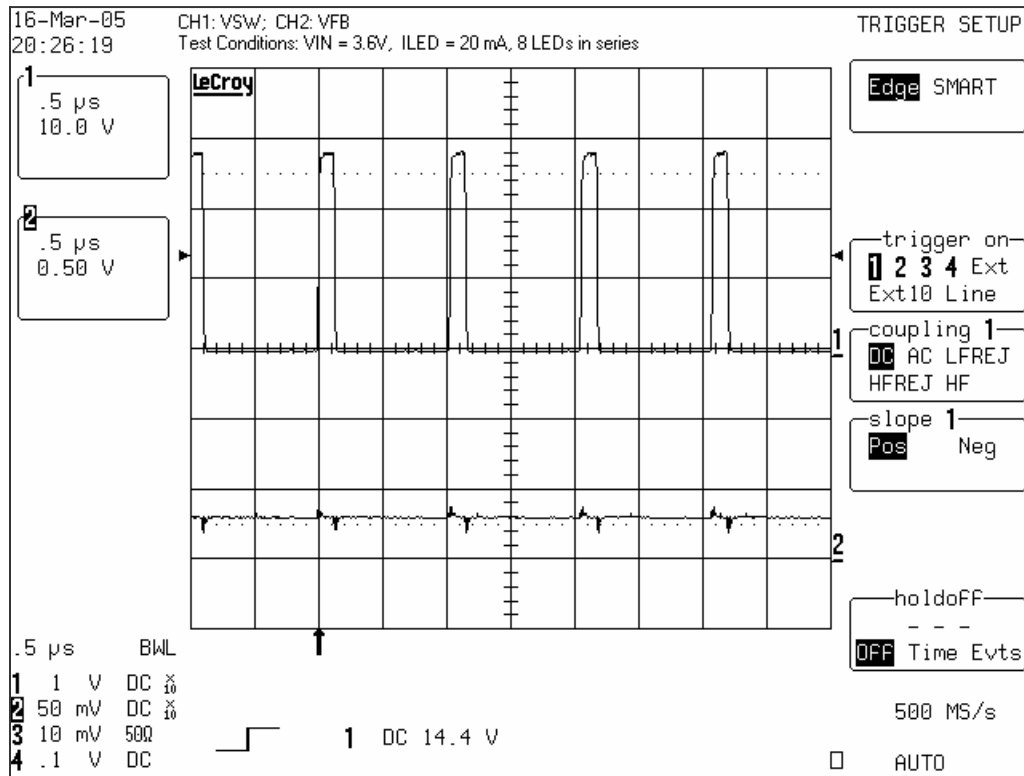

Figure 3. Internal Switch Output and Regulated V_{FB} Voltage Waveforms ($I_{LED} = 20$ mA, $V_{IN} = 3.6$ V)

Figure 4. Internal Switch and Output Voltage Waveforms ($I_{LED} = 20$ mA, $V_{IN} = 3.6$ V)

CAT4237EVAL2EVB

Evaluating LED Current Regulation versus the Input Voltage, V_{IN}

1. Set the I_{LED} to a programmed value using the R2 potentiometer (i.e. 10 mA, 20 mA, 30 mA for $V_{IN} = 3.6$ V)
2. For any I_{LED} value vary the V_{IN} voltage between 2.5 V and 5.5 V
3. Observe the value of I_{LED} measured by the current meter and V_{FB} using a voltmeter. Figure 5 presents the I_{LED} current versus V_{IN} . Figure 6 shows the CAT4237 FB voltage versus input voltage

Note: $R_{SET} = R_1 + R_2$

Figure 5. LED Current Line Regulation

Figure 6. V_{FB} Voltage Line Regulation

CAT4237EVAL2EVB

Efficiency Evaluation

The efficiency is evaluated according to the following equation:

$$\text{Efficiency}(\%) = (I_{LED} \times \Sigma V_{Fi}) / (I_{IN} \times V_{IN}) \times 100,$$

where $\Sigma V_{Fi} = V_{OUT} - V_{LED}$, V_{LED} is the voltage measured at LED (T10) test point.

1. Insert a current meter, CM1, between input supply voltage, V_{EXT} , and V_{IN} pad to monitor the input current, I_{IN}
2. Set the input voltage for $V_{IN} = 3.6\text{ V}$
3. Adjust the R2 potentiometer for the $I_{LED} = 5\text{ mA}$. Observe the I_{LED} current on the meter, CM2, inserted between Pin #1 and Pin #2 of J4 connector
4. Measure the I_{IN} current on CM1
5. Monitor the output voltage on V_{OUT} (T7) and V_{LED} voltage on LED (T10) test points
6. Repeat steps 3 to 5 for $I_{LED} = 10\text{ mA}$, 15 mA , 20 mA , 25 mA and 30 mA

Figure 7 presents the efficiency measured for 2 values of input voltage, $V_{IN} = 3.6\text{ V}$ and $V_{IN} = 4.2\text{ V}$, with 8 LEDs in series connected to the CAT4237 output. The efficiency is over 80% for the recommended LED current levels of 15 mA to 20 mA that ensure a pure “white” light.

Figure 7. CAT4237 Efficiency Driving 8 LEDs in Series

Dimming Control

The LED brightness control can be accomplished by using a PWM signal applied to the SHDN pin or to the FB pin. The other method is to use a variable DC voltage applied through a resistor to FB pin.

1. Dimming using a PWM signal on the SHDN pin

The LEDs are turned off and on at the PWM frequency. The average current changes with the duty cycle. Increasing the duty cycle will increase the LED brightness. The peak current value sets the light spectrum.

- Connect the jumper shunt between Pin #2 and Pin #3 of the J1 connector
- Apply a pulse signal generator to the GEN/DC (T3) pad: Frequency = 200 Hz to 2 kHz ; Amplitude 0 V to 3 V ; $V_{IN} = 3.6\text{ V}$
- Modify the duty cycle between 0% and 100%
- Observe the average current through LEDs measured by a current meter inserted at J4 connector. For 0% duty cycle, the I_{LED} will be off ($I_{LED} = 0\text{ mA}$); At the maximum duty cycle, the LED will be driven at the maximum current set by the R2 potentiometer
- Monitor the FB voltage compared with the PWM signal applied on SHDN input

Figure 8 shows the voltage monitored on the FB pin, V_{FB} (CH2) using a PWM signal applied to the SHDN pin (CH1). The frequency of the PWM signal is 2 kHz approximately.

Figure 8. FB Voltage Waveform with PWM

2. Dimming using a DC voltage applied to the FB pin

A variable external DC voltage is applied on FB pin to adjust the LED current. As the DC voltage is increased, the voltage drop on resistor R3 is increased and the voltage drop on $R_{SET} = R1 + R2$ is decreased, thus the LED current decreases. The external DC voltage is applied to FB pin through a series resistor, R5, which sets the maximum DC voltage.

Also, a filtered PWM signal can be considered as a variable DC voltage.

- Connect the SHDN pin to VIN: jumper shunt between Pin #1 and Pin #2 of J1 connector
- Set the I_{LED} current (i.e. $I_{LED\ MAX} = 20\ mA$)
- Connect the GEN/DC to FB pin through R5 resistor using one jumper between Pin #3 and Pin #4 and another jumper shunt between Pin #5 and Pin #6 of J1 connector
- Apply the variable DC voltage between GEN/DC (T3) and GND (T4)
- Increase the DC voltage value (from 0 V to $V_{MAX} = 3.2\ V$)
- Observe the I_{LED} current decreases from the $I_{LED\ MAX}$ (20 mA – previous set) to $I_{LED\ MIN}$ (0 mA for $V_{MAX} = 3.2\ V$ with the existing resistors values, $R3 = 1\ k\Omega$, $R5 = 10\ k\Omega$)

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
