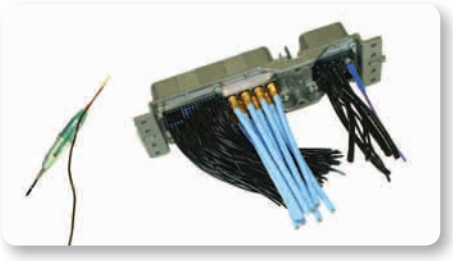
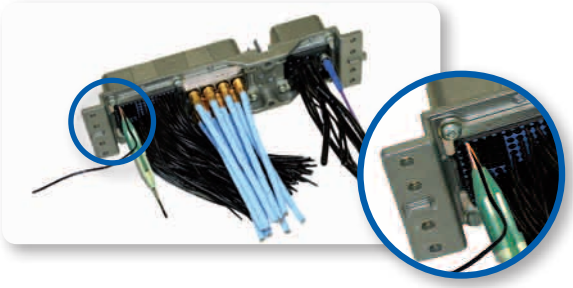
Insertion and Extraction of the Contacts

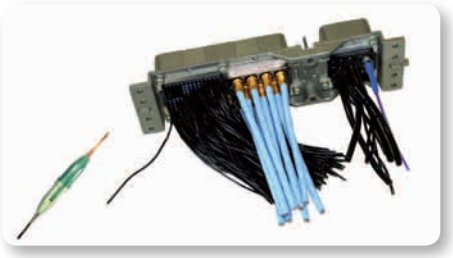
Insertion of the contacts



1 - Engage the crimp cable / contact asembly into the longitudinal slot of the plastic tool coloured tip).
Slide the tool down the cable until the tip of the tool abuts the contact retention shoulder.



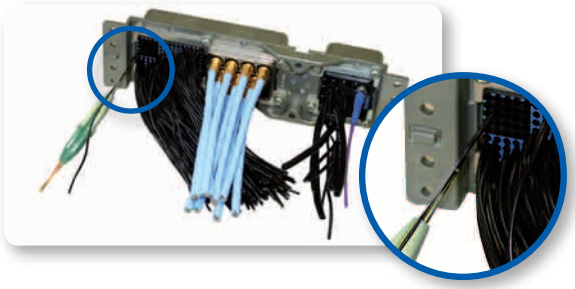
2 - Introduce the contact into the required contact cavity in the insulator, pushing tool axialy, until the contact snaps into position in clip.



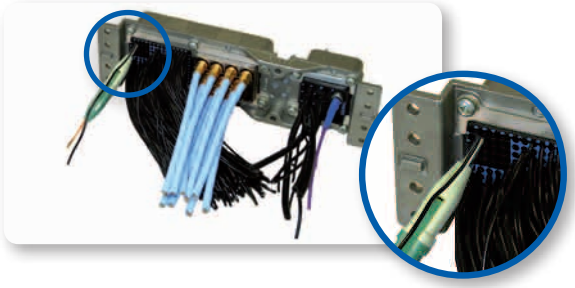
3 - Withdraw the tool (from rear). Check that contact is firmly locked by pulling wire gently. When connector is fully loaded, check the position of contact tips. They should all be in the same plane.

Nota : For larger sizes of cable which are stiff enough manual insertion without tool is preferable.

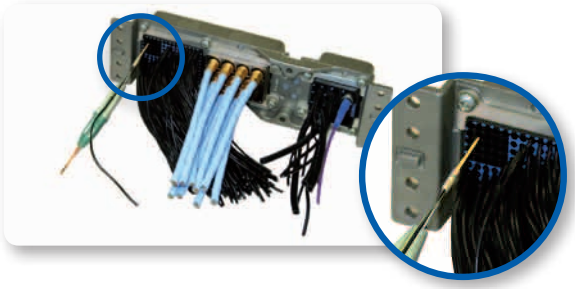
Extraction of the contacts



1 - Engage the appropriate cable into the longitudinal slot of the tool with the white tip towards connector.



2 - Slide the tool down towards the contact. Insert the tool in the insulator until it abouts the contact shoulder.



3 - Holding the tool-contact and cable assembly together, remove them simultaneously.
