1 General

1.1 Target Application

The Hall Effect sensor IC TLE4941plusC is designed to provide information about rotational speed to modern vehicle dynamics control systems and Anti-Lock Braking Systems (ABS). The output has been designed as a two wire current interface. The sensor operates without external components and combines a fast power-up time with a low cut-off frequency. Designed specifically to meet harsh automotive requirements, excellent accuracy and sensitivity is specified over a wide temperature range and robustness to ESD and EMC has been maximized. State-of-the art BiCMOS technology is used for monolithic integration of the active sensor areas and the signal conditioning circuitry. Finally, the optimized piezo compensation and the integrated dynamic offset compensation enables ease of manufacturing and the elimination of magnetic offsets.

The TLE4941plusC is provided with an overmolded 1.8 nF capacitor for improved EMC performance. Infineon also offers customer the possibility to buy sensors with already attached back bias magnets (CB version).

1.2 Features

- Two-wire current interface
- Dynamic self-calibration principle
- Single chip solution
- No external components needed
- High sensitivity
- South and north pole pre-induction possible
- High resistive to piezo effects
- Large operating air-gaps
- Wide operating temperature range
- TLE4941plusC: 1.8 nF overmolded capacitor
- Applicable for small pitches (2mm Hall element distance)
- Integrated back bias magnet as an option

| Type | Order Code | Marking | Package |
|---------------|-------------|---------|--------------|
| TLE4941plusC | SP000478508 | 41CPA | PG-SSO-2-53 |
| TLE4941plusCB | SP000913556 | 941D00 | PG-SSOM-2-11 |

2 Functional Description

2.1 General

The differential Hall sensor IC detects the motion of ferromagnetic and permanent magnet structures by measuring the differential flux density of the magnetic field. To detect the motion of ferromagnetic objects the magnetic field must be provided by a back biasing permanent magnet. Either south or north pole of the magnet can be attached to the back side of the IC package.

Magnetic offsets of up to $\pm 30\text{mT}$ and device offsets are cancelled by a self-calibration algorithm. Only a few magnetic edges are necessary for self-calibration. After the offset calibration sequence, switching occurs when the input signal crosses the arithmetic mean of its max. and min. value (e.g. zero-crossing for sinusoidal signals). The ON and OFF state of the IC are indicated by **High** and **Low** current consumption.

2.2 Marking and data matrix code description

Figure 2-1 Front side and Backside Marking of PG-SSO-2-53

Figure 2-2 Marking of PG-SSO-2-53

2.3 Output Description

Under ideal conditions, the output shows a duty cycle of 50%. Under real conditions, the duty cycle is determined by the mechanical dimensions of the target wheel and its tolerances (40% to 60% might be exceeded for pitch >> 4mm due to the zero-crossing principle).

Figure 2-3 Speed Signal (half a period = $0.5 \times 1/f_{\text{speed}}$)

Figure 2-4 Definition of Rise and Fall Time; Duty Cycle = $t_1/T \times 100\%$

2.4 Under voltage Behavior

The voltage supply comparator has an integrated hysteresis V_{hys} with the maximum value of the release level $V_{\text{rel}} < 4.5\text{V}$. This determines the minimum required supply voltage V_{DD} of the chip. A minimum hysteresis V_{hys} of 0.7V is implemented thus avoiding a toggling of the output when the supply voltage V_{DD} is modulated due to the additional voltage drop at R_{M} when switching from low to high current level and $V_{\text{DD}} = 4.5\text{V}$ (designed for use with $R_{\text{M}} = 75\Omega$).

3 Specification

3.1 Operating Range

Table 3-1 Operating Range

| Parameter | Symbol | Values | | Unit | Note / Test Condition |
|---|-------------------------------|-----------|----------|------|--|
| | | Min. | Max. | | |
| Supply voltage | V_{DD} Extended Range | 4.5 20 | 20 24 | V | Directly on IC leads; includes not the voltage drop at R_m |
| Junction temperature | T_j | -40 | +170 | °C | time limited |
| Pre-induction | B_0 | -500 | +500 | mT | |
| Pre-induction offset between outer probes | $\Delta B_{stat., l/r}$ | -30 | +30 | mT | |
| Differential Induction | ΔB | -120 | +120 | mT | |
| Magnetic signal frequency | f_{mag} | 1 | 10000 | Hz | |

3.2 Electrical Characteristics

Table 3-2 Electrical Characteristics

| Parameter | Symbol | Values | | | Unit | Note / Test Condition |
|--|------------------|-----------|------|---------------|-------------|---|
| | | Min. | Typ. | Max. | | |
| Supply current | I_{Low} | 5.9 | 7 | 8.4 | mA | |
| Supply current | I_{High} | 11.8 | 14 | 16.8 | mA | |
| Output rise/fall slew rate TLE4941plusC | t_r, t_f | 8 8 | | 22 26 | mA/ μ s | $R_M = 75 \Omega \pm 5\%$ $T_j < 125^\circ\text{C}$ $T_j < 170^\circ\text{C}$ |
| Power up time | | | | 100 | us | |
| Magnetic edges required for offset calibration | n_{start} | | | 4 | magn. edges | 5 th edge correct |
| Number of edges in uncalibrated mode | $n_{DZ-Startup}$ | | | 4 | edges | |
| Number of edges suppressed | | | | 0 | | after power on or reset |
| Magnetic edges required for first output pulse | | 1 | | 2 | | after power on or reset |
| Duty cycle | DC | 40 | 50 | 60 | % | @ $\Delta B \geq 2$ mT sine wave see Figure 6 |
| Signal frequency | f | 1 2500 | | 2500 10000 | Hz | |

Table 3-2 Electrical Characteristics

| Parameter | Symbol | Values | | | Unit | Note / Test Condition |
|---|---------------------------|--------|------|------|------|--|
| | | Min. | Typ. | Max. | | |
| Time before chip reset | Δt_{Reset} | 590 | | 848 | ms | |
| Signal behavior after undervoltage or standstill $> t_{\text{Reset}}$ Number of magnetic edges where the first switching occur | $n_{\text{DZ-Start}}$ | 1 | | 2 | edge | Magnetic edge amplitude according to $\Delta \hat{B}_{\text{startup}} \cdot t_{\text{d,input}}$ has to be taken into account |

3.3 Magnetic Characteristics

Table 3-3 Magnetic Characteristics

| Parameter | Symbol | Values | | | Unit | Note / Test Condition |
|--|-----------------------------------|--------|------|------|------|---|
| | | Min. | Typ. | Max. | | |
| Limit threshold $1 \text{ Hz} < f_{\text{mag}} < 2500 \text{ Hz}$ $2500 \text{ Hz} < f_{\text{mag}} < 10000 \text{ Hz}$ | ΔB_{Limit} | | 0.7 | | mT | – |
| Magnetic differential field change necessary for startup $1 \text{ Hz} < f < 2500 \text{ Hz}$ $2500 \text{ Hz} < f < 10000 \text{ Hz}$ | $\Delta \hat{B}_{\text{startup}}$ | | 1.4 | | mT | Magnetic field change for startup with the first edge |

3.3.1 Description of Magnetic Field

Figure 3-2 Definition of field direction and sensor switching

Figure 3-3 Back-Bias field orientation - TLE4941plusCB

3.4 Application Circuit

Circuit below shows the recommended application circuit with reverse bias and overvoltage protection.

Figure 3-4 Application Circuit

Note: An implementation of 10Ω in VDD path reduces minimum power supply direct on leads of the sensor, but decreases max current at D₂ and makes PCB more robust. This PCB represents a compromise of minimum power supply and current flow on D₂. With higher values than 10Ω a higher minimum supply voltage and higher robustness is reached.

3.5 Typical Diagrams (measured performance)

Figure 3-5 Supply Current = $f(T)$ (left), Supply Current = $f(V_{DD})$ (right)

Figure 3-6 Slew Rate = $f(T)$, $R_M = 75 \Omega$ (left), Slew Rate = $f(R_M)$ (right)

Figure 3-7 Magnetic Threshold $\Delta B_{Limit} = f(T)$ at $f = 200\text{Hz}$ (left), Magnetic Threshold $\Delta B_{Limit} = f(f)$ (right)

Figure 3-8 Duty Cycle [%] $\Delta B = 2 \text{ mT}$ at 1 kHz

3.6 Typical Operating Characteristics - TLE4941plusCB

Parameters valid for the described reference target wheel.

Table 3-4 Operating Characteristics

| Parameter | Symbol | Limit Value | | | Unit | Remarks |
|------------------|--------|-------------|-----|-----|------|--|
| | | min | typ | max | | |
| Operating Airgap | AG | 0.5 | | 3.2 | mm | AG=0 at sensor housing (branded side). Valid at 25°C & 0h. No missing output pulses. |

3.7 Reference Target Wheel - TLE4941plusCB

Air gap measurements and functional tests are done with the target wheel described below. Any other wheel can be used. The air gap achieved depends on the material, tooth pitch and width of the target wheel.

Figure 3-9 Top view of reference target wheel

Table 3-5 Reference target wheel geometry

| Parameter | Symbol | Typ value | Unit | Remarks |
|------------------|--------|-----------|------|---------|
| Outside diameter | d | 150 | mm | |
| Number of teeth | Z | 60 | - | |
| Pitch Ratio | | 50:50 | % | |
| Material | | ST37 | | |

4 Package Information

4.1 Package and Packing Dimensions - TLE4941plusC

Pure tin covering (green lead plating) is used. Lead frame material is K62 (UNS: C18090) and contains CuSn1CrNiTi. Product is RoHS (restriction of hazardous substances) compliant when marked with letter G in front or after the data code marking and contains a data matrix code on the back side of the package (see also information note 136/03). Please refer to your key account team or regional sales if you need further information.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
