MEASURING OF CHARACTERISTICS

CAPACITANCE (C)

Capacitance shall be measured by constant current discharge method.

DISCHARGE CURRENT AS A FUNCTION OF RATED CAPACITANCE				
PARAMETER	VALUE			UNIT
Rated capacitance, C _R	4	15	90	F
Discharge current, I _D	4	15	90	mA

Fig. 13 - Voltage Diagram for Capacitance Measurement

Capacitance value C_R is given by discharge current I_D, time t and rated voltage U_R, according to the following equation:

- C_R Rated capacitance, in F
- U_R Rated voltage, in V
- U₁ Starting voltage, in V
- U₂ Ending voltage, in V
- ΔU₃ Voltage drop at internal resistance, in V
- t₁ Time from start of discharge until voltage U₁ is reached, in s
- t₂ Time from start of discharge until voltage U₂ is reached, in s
- I_D Discharge current, in A

$$C_R(F) = \frac{I_D(A) \times (t_2(s) - t_1(s))}{U_1(V) - U_2(V)}$$

For I_D, U₁, and U₂ the following definitions have to be used:

DISCHARGE CHARACTERISTICS

Backup time of 196 HVC series capacitors depends on minimum memory holding voltage and discharge current (corresponding with the current consumption of the load).

For minimum backup times of standard and vertical miniaturized series see figure 18 to figure 20 (charging time ≥ 24 h and CC-CV charging according to table 3).

Note

- Charge and discharge cycles at room temperature - maximal 50 000 cycles at room temperature allowed!

CHARGING VOLTAGE AT DIFFERENT TEMPERATURES				
OPERATING TEMPERATURE RANGE	0 °C UP TO +45 °C		+45 °C UP TO +60 °C	+60 °C UP TO +70 °C/+85 °C
Charge voltage	1 cell	$U_R + 0.03 \text{ V}$	U_R	$U_R - n^{(1)} \times 0.0015 \times (T[°C] - 45)$
	2 cells	$U_R + 0.06 \text{ V}$		
	3 cells	$U_R + 0.09 \text{ V}$		
	> 4 cells	$U_R + 0.10 \text{ V}$		

Notes

- Capacitor is polarized, product will be damaged if reverse charged.
- Voltages higher than specified need to be avoided; otherwise reduction of life time, internal gas generation or damage of HVC hybrid capacitor will occur.
- For other operating temperatures, a temperature derating factor has to be considered for correct charging voltage.
- Surge voltage is only allowed a few seconds per day, but not as a charging process.

(1) n... number of cells

DERATING

Working voltage at temperatures above 60 °C should be below rated voltage U_R . A derating-factor of -1.5 mV/°C per cell is recommended.

PRODUCT AND MOUNTING CHARACTERISTICS

Attention: parts are pre-charged at delivery - handle appropriate.

At delivery products are pre-charged and voltage over terminals is near nominal voltage. Short circuiting of product terminals is permitted. Do not short circuit permanently. Short circuiting of charged cells may heat up the cells. Cells will fulfill UL 2054 - $T_{\text{cell}} < 150 \text{ °C}$ due to self heating in case of short circuiting.

For printed circuit board mounting it has to be taken into account, that for certain form factors top and bottom of products may not be insulated.

Capacitor disposal methods should be in accordance with local and state regulations.
