DATA SHEET

LB11620GP — Monolithic Digital IC Brushless Motor Driver

Overview

The LB11620GP is a direct PWM drive pre-driver IC that is optimal for three-phase power brushless motors. A motor driver circuit with the desired output capability (voltage and current) can be implemented by adding discrete transistors or other power devices to the outputs of this IC. Since the LB11620GP is provided in a miniature package, it is also appropriate for use with miniature motors as well.

Features

- Three-phase bipolar drive
- Direct PWM drive (input of either a control voltage or a variable-duty PWM signal)
- Built-in forward/reverse switching circuit
- 5V regulator output (VREG pin)
- Built-in current limiter circuit (0.25V (typical) reference voltage)
- Built-in under voltage protection circuit
- Built-in automatic recovery type constraint protection circuit (ON: OFF=1: 18) with protection operating state discrimination output (RD pin)
- Hall signal pulse outputs

Specifications

Maximum Ratings at Ta = 25°C

| Parameter | Symbol | Conditions | Ratings | Unit |
|-----------------------------|---------------------|------------------------------|-------------|------|
| Supply voltage 1 | V _{CC} max | V _{CC} pin | 18 | V |
| Output current | I _O max | UL, VL, WL, UH, VH, WH pins | 30 | mA |
| Allowable power dissipation | P _d max | *Mounted on a circuit board. | 1.0 | W |
| Operating temperature | T _{opr} | | -30 to +100 | °C |
| Storage temperature | T _{stg} | | -55 to +150 | °C |

* Mounted on a circuit board: 40.0mm×50.0mm×0.8mm, glass epoxy board.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

LB11620GP

Recommended Operating Ranges at $T_a = 25^\circ\text{C}$

| Parameter | Symbol | Conditions | Ratings | Unit |
|-------------------------------------|-------------|---|------------|------|
| Supply voltage range 1-1 | V_{CC1-1} | V_{CC} pin | 8 to 17 | V |
| Supply voltage range 1-2 | V_{CC1-2} | V_{CC} pin, with V_{CC} shorted to VREG | 4.5 to 5.5 | V |
| Output current | I_O | UL, VL, WL, UH, VH, WH pins | 25 | mA |
| 5 V constant voltage output current | IREG | | -30 | mA |
| HP pin voltage | VHP | | 0 to 17 | V |
| HP pin output current | IHP | | 0 to 15 | mA |
| RD pin voltage | VRD | | 0 to 17 | V |
| RD pin output current | IRD | | 0 to 15 | mA |

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = 12\text{V}$

| Parameter | Symbol | Conditions | Ratings | | | Unit |
|--|----------------------|---|--------------|--------------|---------------|----------------------------|
| | | | min | typ | max | |
| Supply voltage 1 | I_{CC1} | | | 12 | 16 | mA |
| 5V constant voltage output (VREG pin) | | | | | | |
| Output voltage | VREG | | 4.7 | 5.0 | 5.3 | V |
| Line regulation | ΔV_{REG1} | $V_{CC} = 8$ to 17V | | 40 | 100 | mV |
| Load regulation | ΔV_{REG2} | $I_O = -5$ to -20mA | | 10 | 30 | mV |
| Temperature coefficient | ΔV_{REG3} | Design target | | 0 | | $\text{mV}/^\circ\text{C}$ |
| Low-voltage protection circuit (VREG pin) | | | | | | |
| Operating voltage | VSDL | | 3.5 | 3.7 | 3.9 | V |
| Clear voltage | VSDH | | 3.95 | 4.15 | 4.35 | V |
| Hysteresis | ΔV_{SD} | | 0.3 | 0.45 | 0.6 | V |
| Output Block | | | | | | |
| Output voltage 1-1 | V_{OUT1-1} | Low level $I_O = 400\mu\text{A}$ | | 0.2 | 0.5 | V |
| Output voltage 1-2 | V_{OUT1-2} | Low level $I_O = 10\text{mA}$ | | 0.9 | 1.2 | V |
| Output voltage 2 | V_{OUT2} | High level $I_O = -20\text{mA}$ | $V_{CC-1.1}$ | $V_{CC-0.9}$ | | V |
| Output leakage current | I_{Oleak} | | | | 10 | μA |
| Hall Amplifier Block | | | | | | |
| Input bias current | IHB (HA) | | -2 | -0.5 | | μA |
| Common-mode input voltage range 1 | VICM1 | When a Hall effect sensor is used | 0.5 | | $V_{CC-2.0}$ | V |
| Common-mode input voltage range 2 | VICM2 | For single-sided input bias (Hall IC application) | 0 | | V_{CC} | V |
| Hall input sensitivity | | | 80 | | | mVp-p |
| Hysteresis | ΔV_{IN} (HA) | | 15 | 24 | 40 | mV |
| Input voltage low \rightarrow high | VSLH (HA) | | 5 | 12 | 20 | mV |
| Input voltage high \rightarrow low | VSHL (HA) | | -20 | -12 | -5 | mV |
| PWM Oscillator (PWM pin) | | | | | | |
| High-level output voltage | V_{OH} (PWM) | | 2.75 | 3.0 | 3.25 | V |
| Low-level output voltage | V_{OL} (PWM) | | 1.2 | 1.35 | 1.5 | V |
| External capacitor charge current | ICHG | $V_{PWM} = 2.1\text{V}$ | -120 | -90 | -65 | μA |
| Oscillator frequency | f (PWM) | $C = 2000\text{pF}$ | | 22 | | kHz |
| Amplitude | V (PWM) | | 1.4 | 1.6 | 1.9 | Vp-p |
| EI+ pin | | | | | | |
| Input bias current | IB (CTL) | | -1 | | 1 | μA |
| Common-mode input voltage range | VICM | | 0 | | $V_{REG-1.7}$ | V |
| Input voltage 1 | VCTL1 | Output duty 100% | | 3.0 | | V |
| Input voltage 2 | VCTL2 | Output duty 0% | | 1.35 | | V |
| Input voltage 1L | VCTL1L | Design target value. When $V_{REG} = 4.7\text{V}$, 100% | | 2.82 | | V |
| Input voltage 2L | VCTL2L | Design target value. When $V_{REG} = 4.7\text{V}$, 0% | | 1.29 | | V |
| Input voltage 1H | VCTL1H | Design target value. When $V_{REG} = 5.3\text{V}$, 100% | | 3.18 | | V |
| Input voltage 2H | VCTL2H | Design target value. When $V_{REG} = 5.3\text{V}$, 0% | | 1.44 | | V |

Pin Assignment

LB11620GP

• Three-Phase Logic Truth Table (IN = “H” indicates the state where $IN^+ > IN^-$)

| | F/R = “L” | | | F/R=“H” | | | Output | |
|---|-----------|-----|-----|---------|-----|-----|--------|----|
| | IN1 | IN2 | IN3 | IN1 | IN2 | IN3 | PWM | |
| 1 | H | L | H | L | H | L | VH | UL |
| 2 | H | L | L | L | H | H | WH | UL |
| 3 | H | H | L | L | L | H | WH | VL |
| 4 | L | H | L | H | L | H | UH | VL |
| 5 | L | H | H | H | L | L | UH | WL |
| 6 | L | L | H | H | H | L | VH | WL |

• PWMIN pin

| Input state | State |
|--------------|------------|
| High or open | Output off |
| Low | Output on |

If the PWM pin is not used, the input must be held at the low level.

• N1 pin

| Input state | HP output |
|--------------|--------------------------------------|
| High or open | Three Hall sensor synthesized output |
| Low | Single Hall sensor output |

Explanation of Pin Functions

| Pin No. | Pin | Description |
|-----------------------|---|--|
| 1, 24 3, 2 5, 4 | IN1 ⁺ , IN1 ⁻ IN2 ⁺ , IN2 ⁻ IN3 ⁺ , IN3 ⁻ | Hall sensor inputs from each motor phase. The logic high state indicates that $IN^+ > IN^-$. If inputs are provided by a Hall effect sensor IC, the common-mode input range is expanded by biasing either the + or - input. |
| 6 | PWM | Functions as both the PWM oscillator frequency setting pin and the initial reset pulse setting pin. Connect a capacitor between this pin and ground. |
| 7 | RD | Lock (motor constrained) detection state output. This output is turned on when the motor is turning and off when the lock protection function detects that the motor has been stopped. This is an open collector output. |
| 8 | CSD | Sets the operating time for the lock protection circuit. Connect a capacitor between this pin and ground. Connect this pin to ground if the lock protection function is not used. |
| 9 | PWMIN | PWM pulse signal input. The output goes to the drive state when this pin is low and to the off state when this pin is high or open. To use this pin for control, a CTL amplifier input such that the TOC pin voltage goes to the 100% duty state must be provided. |
| 10 | F/R | Forward/reverse control input |
| 11 | HP | Hall signal output (HP output). This provides either a single Hall sensor output or a synthesized 3-sensor output. |
| 12 | N1 | Hall signal output (HP output) selection |
| 13 | EI+ | CTL amplifier + (no inverting) input. The PWMIN pin must be held at the low level to use this input for motor control |
| 14 | VREG | 5V regulator output (Used as the control circuit power supply. A low-voltage protection circuit is built in.) Connect a capacitor between this pin and ground for stabilization. |
| 15 | V _{CC} | Power supply. Connect a capacitor between this pin and ground to prevent noise and other disturbances from affecting this IC. |
| 16 | GND | Ground |
| 17 | RF | Output current detection. The current detection resistor (Rf) voltage is sensed by the RF pin to implement current detection. The maximum output current is set by RF to be $I_{OUT} = 0.25/R_f$. |
| 22 20 18 | UH VH WH | Outputs (PWM outputs). These are push-pull outputs. |
| 23 21 19 | UL VL WL | Outputs These are push-pull outputs. |

Pin Functions

| PIN No. | PIN name | Function | Equivalent circuit |
|-----------------------------|--|--|--------------------|
| 24 1 2 3 4 5 | IN1- IN1+ IN2- IN2+ IN3- IN3+ | Hall input pin. IN+ > IN- to "H", IN+ < IN- to "L". Connect the capacitor between IN+ and IN- when the noise of the hall signal becomes a problem. | |
| 6 | PWM | Functions as both the PWM oscillator frequency setting pin and the initial reset pulse setting pin. Connect a capacitor between this pin and ground. It is possible to set it to about 22kHz with C=2000pF. | |
| 7 | RD | Lock (motor constrained) detection state output. This output is turned on when the motor is turning and off when the lock protection function detects that the motor has been stopped. | |
| 11 | HP | Hall signal output pin. Two kinds of outputs can be selected by setting the N1 pin. | |
| 8 | CSD | Sets the operating time for the lock protection circuit. Connect a capacitor between this pin and ground. Connect this pin to ground if the lock protection function is not used. | |
| 9 | PWMIN | PWM pulse signal input. The output goes to the drive state when this pin is low and to the off state when this pin is high or open. To use this pin for control, a CTL amplifier input such that the TOC pin voltage goes to the 100% duty state must be provided. | |
| 10 | F/R | Forward/reverse control input. | |
| 12 | N1 | Hall signal output (HP output) selection. | |

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
