

SY10/100EP16U

2.5/3.3V Precision ECL Differential Receiver/Driver

General Description

The SY10/100EP16U is a 2.5/3.3V, high-speed, fully differential ECL Receiver/Driver that can process clock signals as fast as 3GHz or data patterns up to 2.5Gbps.

The differential input includes an internal 75k Ω pull-down resistor on both the true and complement inputs and a 37.5k Ω pull-up resistor in the complement input only. For AC-coupled input interface and single-ended applications, an integrated voltage reference (V_{BB}) is provided. Single-ended CLK input operation is limited to $V_{CC} \geq 3.0V$ in PECL mode, or $V_{EE} \leq -3.0V$. The V_{BB} pin should be used only as a bias for the SY10/100EP16U since its current sink/source capability is limited. Whenever used, the V_{BB} pin should be bypassed to the most positive supply voltage. The output is 800mV ECL, with fast rise/fall times guaranteed to be less than 200ps.

When the inputs are left open, the internal input clamps will force the Q output low.

The SY10/100EP16U operates from a 2.5V $\pm 5\%$ or 3.3V $\pm 10\%$ supply and is guaranteed over the full industrial temperature range ($-40^{\circ}C$ to $+85^{\circ}C$). The SY100EP16V is part of Micrel's high-speed, Precision Edge[®] product line.

Datasheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Functional Block Diagram

Precision Edge[®]

Features

- Precision 800mV ECL Receiver/Driver
- 10K and 100K ECL compatible I/O
- Guaranteed AC performance over temperature and voltage:
 - DC-to > 2.5Gbps throughput
 - 240ps typical propagation delay (D-to-Q)
 - <200ps rise/fall times
- Ultra-low jitter design
 - < 0.3ps_{RMS} random jitter
- PECL and NECL operation capability
- PECL operating range: $V_{CC} = 2.375V$ to $3.63V$ with $V_{EE} = 0V$
- NECL operating range: $V_{CC} = 0V$ with $V_{EE} = -2.375V$ to $-3.63V$
- 2.5V $\pm 5\%$ or 3.3V $\pm 10\%$ power supply operation
- Industrial temperature range: $-40^{\circ}C$ to $+85^{\circ}C$
- Available in 8-pin (2mm x 2mm) MLF[®], 8-pin MSOP, 8-pin SOIC packages

Applications

- All SONET clock and data distribution
- Fibre Channel clock and data distribution
- Gigabit Ethernet clock and data distribution
- Backplane distribution

Markets

- Storage
- ATE
- Test and measurement
- Enterprise networking equipment
- High-end servers
- Access
- Metro area network equipment

Notes:

1. Contact factory for die availability. Dice are guaranteed at $T_A = 25^\circ\text{C}$, DC Electricals only.
2. Tape and Reel.

Pin Configuration

8-Pin MLF[®] (MLF-8)

8-pin SOIC (SOIC-8)
8-pin MSOP (MSOP-8)

Pin Description

Pin Number	Pin Name	Pin Function
2, 3	D, /D	ECL Inputs. The D input has an internal 75k Ω pull-down resistor and the /D has an internal 37.5k Ω pull-up and a 75k Ω pull-down resistor.
7, 6	Q, /Q	ECL Outputs. Terminate with 50 Ω to V_{CC} -2V. See "Output Interface Applications" section for more details.
4	V_{BB}	Reference Output Voltage: This reference is typically used to bias the unused inverting input for single-ended input applications, or as the termination point for AC-coupled differential input applications. V_{BB} reference value is approximately V_{CC} - 1.42V, and tracks V_{CC} 1:1. Maximum sink/source capability for V_{BB} is 0.50mA. For single ended inputs, connect to the unused input through a 50 Ω resistor. Decouple the V_{BB} pin with a 0.01 μ F capacitor to V_{CC} .
8	V_{CC}	Positive Power Supply: Bypass with 0.1 μ F//0.01 μ F low ESR capacitors as close to the V_{CC} pin as possible.
5	V_{EE}	Negative Power Supply: V_{EE} and exposed pad must be tied to the most negative supply. Exposed pad is available for 8-pin MLF [®] package only.

Absolute Maximum Ratings⁽¹⁾

Supply Voltage	
PECL Mode (V_{CC})	+6V
NECL Mode (V_{EE})	-6V
Current (I_{BB})	
Source or Sink current on V_{BB}	± 0.5 mA
Input Voltage (V_{IN})	
PECL Mode	V_{CC} to 0V
NECL Mode	0V to V_{EE}
Output Current (I_{OUT})	
Continuous	50mA
Surge	100mA
Lead Temperature (soldering, 20sec.)	
Storage Temperature (T_s)	

Operating Ratings⁽²⁾

Supply Voltage (V_{CC})	
PECL Mode ($V_{EE} = 0$ V)	+2.375V to +3.60V
Supply Voltage (V_{EE})	
NECL Mode ($V_{CC} = 0$ V)	-2.375V to -3.60V

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
4. Input and output parameters vary 1:1 with V_{CC} .
5. All loading with 50Ω to $V_{CC}-2.0V$.
6. Do not use V_{BB} at $V_{CC} < 3.0$. Single ended input CLK pin operation is limited to $V_{CC} \geq 3.0V$ in PECL mode.
7. V_{IHCMR} (min) varies 1:1 with V_{EE} , V_{IHCMR} (max) varies 1:1 with V_{CC} . The V_{IHCMR} range is referenced to the most positive side of the differential input signal.

Notes:

25. Measured using a 750mV source, 50% duty cycle input. 50 Ω to V_{CC} -2V loading.

26. Skew is measured between outputs under identical transitions. It is defined only for differential operation where the delays are measured from the cross point of the inputs to the cross point of the outputs.

Typical Characteristics

$V_{CC} = 2.5V$, $GND = 0V$, $V_{IN} = 800mV$, $R_L = 50\Omega$ to $V_{CC}-2V$, $T_A = 25^\circ C$, unless otherwise stated.

Functional Characteristics

$V_{CC} = 2.5V$, $GND = 0V$, 100k version, $V_{IN} = 150mV$, Data Pattern: $2^{23}-1$, $R_L = 50\Omega$ to $V_{CC}-2V$, $T_A = 25^\circ C$, unless otherwise stated.

Functional Characteristics (continued)

$V_{CC} = 2.5V$, $GND = 0V$, 100k version, $V_{IN} = 150mV$, $R_L = 50\Omega$ to $V_{CC}-2V$, $T_A = 25^\circ C$, unless otherwise stated.

Single-Ended and Differential Swings

Figure 1a. Single-Ended Swing

Figure 1b. Differential Swing

Output Interface Applications

ECL outputs have very low output impedance (open emitter), and small signal swing which results in low EMI. ECL is ideal for driving 50Ω-and-100Ω-controlled impedance transmission lines. There are several techniques in terminating the ECL output, as shown in Figure 2a and 2b.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)
