

# MC14046B

## Phase Locked Loop

The MC14046B phase locked loop contains two phase comparators, a voltage-controlled oscillator (VCO), source follower, and zener diode. The comparators have two common signal inputs, PCA<sub>in</sub> and PCB<sub>in</sub>. Input PCA<sub>in</sub> can be used directly coupled to large voltage signals, or indirectly coupled (with a series capacitor) to small voltage signals. The self-bias circuit adjusts small voltage signals in the linear region of the amplifier. Phase comparator 1 (an exclusive OR gate) provides a digital error signal PC1<sub>out</sub>, and maintains 90° phase shift at the center frequency between PCA<sub>in</sub> and PCB<sub>in</sub> signals (both at 50% duty cycle). Phase comparator 2 (with leading edge sensing logic) provides digital error signals, PC2<sub>out</sub> and LD, and maintains a 0° phase shift between PCA<sub>in</sub> and PCB<sub>in</sub> signals (duty cycle is immaterial). The linear VCO produces an output signal VCO<sub>out</sub> whose frequency is determined by the voltage of input VCO<sub>in</sub> and the capacitor and resistors connected to pins C1<sub>A</sub>, C1<sub>B</sub>, R1, and R2. The source-follower output SF<sub>out</sub> with an external resistor is used where the VCO<sub>in</sub> signal is needed but no loading can be tolerated. The inhibit input Inh, when high, disables the VCO and source follower to minimize standby power consumption. The zener diode can be used to assist in power supply regulation.

Applications include FM and FSK modulation and demodulation, frequency synthesis and multiplication, frequency discrimination, tone decoding, data synchronization and conditioning, voltage-to-frequency conversion and motor speed control.

### Features

- Buffered Outputs Compatible with MHTL and Low-Power TTL
- Diode Protection on All Inputs
- Supply Voltage Range = 3.0 to 18 V
- Pin-for-Pin Replacement for CD4046B
- Phase Comparator 1 is an Exclusive OR Gate and is Duty Cycle Limited
- Phase Comparator 2 Switches on Rising Edges and is not Duty Cycle Limited
- Pb-Free Packages are Available\*

### MAXIMUM RATINGS (Voltages Referenced to V<sub>SS</sub>)

| Symbol           | Parameter                               | Value                         | Unit |
|------------------|---|-------------------------------|------|
| V <sub>DD</sub>  | DC Supply Voltage Range                 | -0.5 to +18.0                 | V    |
| V <sub>in</sub>  | Input Voltage Range (All Inputs)        | -0.5 to V <sub>DD</sub> + 0.5 | V    |
| I <sub>in</sub>  | DC Input Current, per Pin               | ±10                           | mA   |
| P <sub>D</sub>   | Power Dissipation, per Package (Note 1) | 500                           | mW   |
| T <sub>A</sub>   | Operating Temperature Range             | -55 to +125                   | °C   |
| T <sub>stg</sub> | Storage Temperature Range               | -65 to +150                   | °C   |

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 4 of this data sheet.

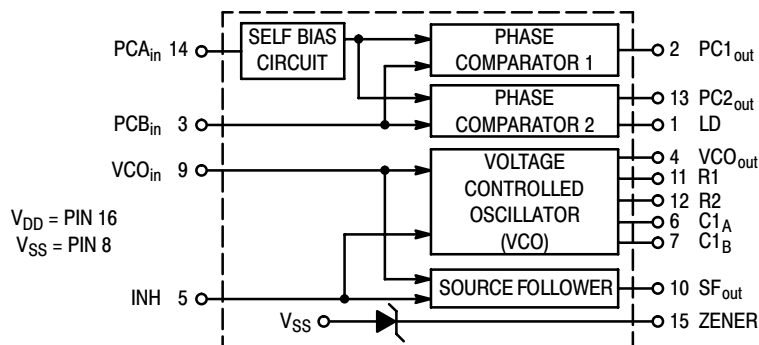

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>in</sub> and V<sub>out</sub> should be constrained to the range V<sub>SS</sub> ≤ (V<sub>in</sub> or V<sub>out</sub>) ≤ V<sub>DD</sub>.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either V<sub>SS</sub> or V<sub>DD</sub>). Unused outputs must be left open.

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

**Figure 1. Phase Comparators State Diagrams**

| Characteristic   | Using Phase Comparator 1   | Using Phase Comparator 2  |
|--|--|---|
| No signal on input PCA <sub>in</sub> .   | VCO in PLL system adjusts to center frequency (f <sub>0</sub> ).   | VCO in PLL system adjusts to minimum frequency (f <sub>min</sub> ). |
| Phase angle between PCA <sub>in</sub> and PCB <sub>in</sub> .  | 90° at center frequency (f <sub>0</sub> ), approaching 0° and 180° at ends of lock range (2f <sub>L</sub> )  | Always 0° in lock (positive rising edges).                          |
| Locks on harmonics of center frequency.  | Yes  | No  |
| Signal input noise rejection.  | High   | Low   |
| Lock frequency range (2f <sub>L</sub> ).   | The frequency range of the input signal on which the loop will stay locked if it was initially in lock; 2f <sub>L</sub> = full VCO frequency range = f <sub>max</sub> - f <sub>min</sub> .   |   |
| Capture frequency range (2f <sub>C</sub> ).  | The frequency range of the input signal on which the loop will lock if it was initially out of lock.   |   |
|  | Depends on low-pass filter characteristics (see Figure 3). f <sub>C</sub> ≤ f <sub>L</sub>   | f <sub>C</sub> = f <sub>L</sub>                                     |
| Center frequency (f <sub>0</sub> ).  | The frequency of VCO <sub>out</sub> , when VCO <sub>in</sub> = 1/2 V <sub>DD</sub>   |   |
| VCO output frequency (f).  | $f_{min} = \frac{1}{R_2(C_1 + 32 \text{ pF})} \quad (V_{CO} \text{ input} = V_{SS})$ $f_{max} = \frac{1}{R_1(C_1 + 32 \text{ pF})} + f_{min} \quad (V_{CO} \text{ input} = V_{DD})$ <p>Where: 10K ≤ R<sub>1</sub> ≤ 1 M<br/>                     10K ≤ R<sub>2</sub> ≤ 1 M<br/>                     100pF ≤ C<sub>1</sub> ≤ .01 μF</p> |   |
| Note: These equations are intended to be a design guide. Since calculated component values may be in error by as much as a factor of 4, laboratory experimentation may be required for fixed designs. Part to part frequency variation with identical passive components is typically less than ± 20%. |  |   |

**Figure 2. Design Information**

# MC14046B

## Typical Low-Pass Filters

Typically:

$$R_4 C_2 = \frac{6N}{f_{\max}} - \frac{N}{2\pi \Delta f}$$

$$(R_3 + 3,000\Omega) C_2 = \frac{100N\Delta f}{f_{\max}^2} - R_4 C_2$$

$$\Delta f = f_{\max} - f_{\min}$$

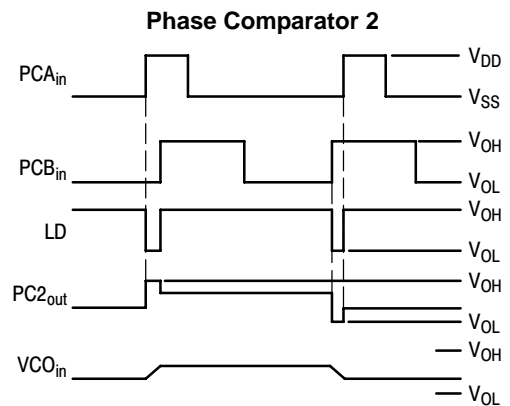

NOTE: Sometimes R3 is split into two series resistors each  $R_3 \div 2$ . A capacitor  $C_C$  is then placed from the midpoint to ground. The value for  $C_C$  should be such that the corner frequency of this network does not significantly affect  $\Omega_n$ . In Figure B, the ratio of R3 to R4 sets the damping,  $R_4 \approx (0.1)(R_3)$  for optimum results.

## LOW-PASS FILTER

Definitions:  $N$  = Total division ratio in feedback loop  
 $K\phi = V_{DD}/\pi$  for Phase Comparator 1  
 $K\phi = V_{DD}/4\pi$  for Phase Comparator 2  
 $KVCO = \frac{2\pi \Delta f_{VCO}}{V_{DD} - 2V}$   
 for a typical design  $\Omega_n \approx \frac{2\pi f_r}{10}$  (at phase detector input)  
 $\zeta \approx 0.707$

| Filter A  | Filter B  |
|---|---|
| $\omega_n = \sqrt{\frac{K\phi KVCO}{NR_3 C_2}}$ | $\omega_n = \sqrt{\frac{K\phi KVCO}{NC_2(R_3 + R_4)}}$  |
| $\zeta = \frac{N\omega_n}{2K\phi KVCO}$         | $\zeta = 0.5 \omega_n (R_3 C_2 + \frac{N}{K\phi KVCO})$ |
| $F(s) = \frac{1}{R_3 C_2 S + 1}$                | $F(s) = \frac{R_3 C_2 S + 1}{S(R_3 C_2 + R_4 C_2) + 1}$ |

### SOEIAJ-16 F SUFFIX PLASTIC EIAJ SOIC PACKAGE CASE 966-01 ISSUE 0

#### NOTES:

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: MILLIMETER.
3. DIMENSIONS D AND E DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS AND ARE MEASURED AT THE PARTING LINE. MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.15 (0.006) PER SIDE.
4. TERMINAL NUMBERS ARE SHOWN FOR REFERENCE ONLY.
5. THE LEAD WIDTH DIMENSION (b) DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.08 (0.003) TOTAL IN EXCESS OF THE LEAD WIDTH DIMENSION AT MAXIMUM MATERIAL CONDITION. DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT. MINIMUM SPACE BETWEEN PROTRUSIONS AND ADJACENT LEAD TO BE 0.46 (0.018).

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «**JONHON**», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «**FORSTAR**».

## JONHON

«**JONHON**» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«**FORSTAR**» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
