

General Description

The QPL6202Q is a flat-gain, high-linearity, ultra-low noise amplifier in a small 2 x 2 mm surface-mount package. At 2.3 GHz, the amplifier typically provides 21.8 dB gain, +39.9 dBm OIP3 at a 55 mA bias setting, and 0.52 dB noise figure. The LNA can be biased from a single positive supply ranging from 3.3 to 5.25 volts. The device is housed in a green/RoHS-compliant industry-standard 2x2 mm package.

The QPL6202Q uses a high performance E-pHEMT process. The low noise amplifier contains an internal active bias to maintain high performance over temperature. This LNA integrates a shutdown biasing capability to allow for operation in TDD applications.

Pin Configuration and Description

Top View

Pad No.	Label	Description
1	Vbias	Sets the Icq bias point for the device.
2	RF In	RF Input pin. A DC Block is required.
6	Shut Down	A high voltage (>1.17V) turns off the device. If the pin is pulled to ground or driven with a voltage less than 0.63V, then the device will operate under LNA ON state.
7	RF Out / DCBias	RF Output pin. DC bias will also need to be injected through a RF bias choke/inductor for operation.
3, 4, 5, 8	NC	No electrical connection. Provide grounded land pads for PCB mounting integrity.
Backside Paddle	RF/DC GND	RF/DC ground. Use recommended via pattern to minimize inductance and thermal resistance; see PCB Mounting Pattern for suggested footprint.
