

800mA LDO REGULATOR R1170X series

■ OUTLINE

The R1170 Series are positive voltage regulator ICs by CMOS process. The R1170 Series have features of high ripple rejection, low dropout voltage, high output voltage accuracy, low consumption current. Each of these ICs consists of a voltage reference unit, an error amplifier, resistor net for setting output voltage, a current limit circuit at short mode, a chip enable circuit, and thermal-shunt circuit. Output Voltage of R1170 is fixed in the IC.

Low consumption current by the merit of CMOS process and built-in transistors with low ON-resistance make low dropout voltage and chip enable function prolong the battery life. These regulators are remarkable improvement on the current regulators in terms of ripple rejection, input transient response, and load transient response.

Maximum Output Current is large for its compact size.

Thus, the R1170 Series are suitable for various power sources for portable appliances.

Since the packages for these ICs are the SOT-89-5 package or HSON6, high density mounting of the ICs on boards is possible.

■ FEATURES

- Ultra-Low Supply Current..... TYP. 80 μ A
- Low Standby Current..... TYP. 0.1 μ A
- Output Current MIN. 800mA($V_{IN}=V_{OUT}+1.0V$)
- Output Voltage Stepwise setting with a step of 0.1V in the range of 1.5V to 4.0V
- High Output Voltage Accuracy..... $\pm 2.0\%$
- Low Dropout Voltage..... TYP. 0.12V($V_{OUT}=3.0V$, $I_{OUT}=300mA$)
- Line Regulation..... TYP. 0.05%/V
- Small Package SOT-89-5, HSON6
- Built-in Current Limit Circuit
- Built-in Thermal Shunt Circuit
- Low Temperature-drift Coefficient of Output Voltage TYP. $\pm 100ppm/^{\circ}C$

■ APPLICATIONS

- Local Power source for Notebook PC.
- Local Power source for portable appliances, cameras, and videos.
- Local Power source for equipment of battery-use.
- Local Power source for home appliances.

■ BLOCK DIAGRAMS

■ SELECTION GUIDE

The output voltage, the chip-enable polarity, the taping type can be selected at the user's request. The selection can be made with the part number as follows;

R1170X XXXX-XX ← Part Number
 ↑ ↑ ↑ ↑
 a b c d

Code	Contents
a	Package Type; H: SOT89-5, D: HSON-6P
b	Designation of Output Voltage(V _{OUT}) Stepwise setting with 0.1V increment in the range from 1.5V to 4.0V
c	Designation of option; A: Built-in Chip Enable Circuit, Active at "L" B: Built-in Chip Enable Circuit, Active at "H"
d	Designation of Taping Type; T1 or T2 (SOT89-5), TR(HSON-6) (Refer to Taping Specifications)

■ PIN CONFIGURATION

● HSON-6P

■ PIN DESCRIPTION

SOT89-5

Pin No.	Symbol	Description
1	$\overline{\text{CE}}$ or CE	Chip Enable Pin Voltage Regulator Output Pin
2	GND	Ground Pin
3	NC	No Connection
4	VDD	Input Pin
5	VOUT	Voltage Regulator Output Pin

HSON-6P

Pin No.	Symbol	Description
1	VOUT	Voltage Regulator Output Pin
2	VOUT	Voltage Regulator Output Pin
3	$\overline{\text{CE}}$ or CE	Chip Enable Pin Voltage Regulator Output Pin
4	GND	Ground Pin
5	VDD	Input Pin
6	VDD	Input Pin

■ ABSOLUTE MAXIMUM RATINGS

Item	Symbol	Rating	Unit
Input Voltage	VIN	7.0	V
Input Voltage(CE or CE Input Pin)*Note	VCE	-0.3 ~ VIN+0.3	V
Output Voltage	VOUT	-0.3 ~ VIN+0.3	V
Output Current	IOUT	1.2	A
Power Dissipation	PD	Internally limited	
Operating Temperature	Topt	-40 ~ 85	°C
Storage Temperature	Tstg	-55 ~ 125	°C

■ ELECTRICAL CHARACTERISTICS

●R1170XxxxA

(T_{opt}=25°C)

Item	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input Voltage	V _{IN}				6.0	V

TEST CIRCUITS

Standard Test Circuit

Supply Current Test Circuit

Test Circuit for Ripple Rejection, Input Transient Response

Test Circuit for Load Transient Response

■ Technical Notes on External Components and Typical Application

Phase Compensation

In these ICs, phase compensation is made with Output capacitor for securing stable operation even if the load current is varied. For this purpose, use as much as 10 μ F Capacitor as C_L .

If you use a tantalum type capacitor and ESR value of the capacitor is large, output might be unstable. Evaluate your circuit with considering frequency characteristics. Further, refer to the Typical Characteristics No.12.

Mounting on PCB

Make VDD and GND lines sufficient. If the impedance of these is high, current flows, the noise might be picked up or be a cause of unstable operation. Further use as much as 10 μ F Capacitor between VDD pin and GND pin as close as possible.

Set an Output capacitor between VOUT pin and GND pin for phase compensation as close as possible. (Refer to the example of typical application)

Example of the typical application of R1170HxxxB

$C_I=10\mu\text{F}(\text{Ceramic})$, $C_L=10\mu\text{F}(\text{Ceramic})$

TYPICAL CHARACTERISTICS

1) Output Voltage vs. Output Current ($T_{opt}=25^{\circ}\text{C}$)

2) Output Voltage vs. Input Voltage ($T_{opt}=25^{\circ}\text{C}$)

3) Dropout Voltage vs. Output Current

4) Output Voltage vs. Temperature

5) Supply Current vs. Input Voltage ($T_{opt}=25^{\circ}C$)

6) Supply Current vs. Temperature

7) Dropout Voltage vs. Set Output Voltage($T_{opt}=25^{\circ}\text{C}$)

8) Ripple Rejection vs. Frequency

9) Ripple Rejection vs. Input Voltage

10) Input Transient Response ($T_{opt}=25^{\circ}C$)

11) Load Transient Response($T_{opt}=25^{\circ}C$)

12) Stable Area($T_{opt}=25^{\circ}C$, V_{IN} =Set Output Voltage+1V, C_{IN} =Ceramic 10 μF)

As an output capacitor for this IC, Ceramic capacitor is recommendable. However, other low ESR type capacitor can be used with this IC.

For your reference, noise level is tested with the circuit as shown above, and if the noise level is 40 μV or less than 40 μV , the ESR values are plotted as stable area. Upper limit is described in the next four graphs, or ESR vs. Output Current. (Hatched area is the stable area.)

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
