

# NB3V110xC Series

## 3.3V/2.5V/1.8V LVCMOS Low Skew Fanout Buffer Family

### Description

The NB3V110xC are a modular, high-performance, low-skew, general purpose LVCMOS clock buffer family. The family of devices is designed with a modular approach. Four different fan-out variations, 1:2, 1:3, 1:4, 1:6 and 1:8, are available. All of the devices are pin compatible to each other for easy handling. All family members share the same high performing characteristics like low additive jitter, low skew, and wide operating temperature range. The NB3V110xC supports an asynchronous output enable control (OE) which switches the outputs into a low state when OE is low. The NB3V110xC devices operate in a 3.3 V, 2.5 V and 1.8 V environment and are characterized for operation from -40°C to 105°C.

### Features

- Operating Temperature Range: -40°C to 105°C
- High-Performance 1:2, 1:3, 1:4, 1:6, 1:8 LVCMOS Clock Buffer
- Available in 8-, 14-, 16-Pin TSSOP and WDFN8 Packages
- Very Low Output-to-Output Skew < 50 ps
- Very Low Additive Jitter < 200 fs
- Supply Voltage: 3.3 V, 2.5 V or 1.8 V
- $f_{max} = 250$  MHz for 3.3 V;  $f_{max} = 180$  MHz for 2.5 V;  
 $f_{max} = 133$  MHz for 1.8 V
- These Devices are Pb-Free and are RoHS Compliant

		V <sub>DD</sub> = 2.5 V		45		
		V <sub>DD</sub> = 1.8 V		60		
f <sub>OUT</sub>	Output frequency	V <sub>DD</sub> = 3.0 V to 3.6 V	DC		250	MHz
		V <sub>DD</sub> = 2.3 V to 2.7 V	DC		180	
		V <sub>DD</sub> = 1.71 V to 1.89 V	DC		133	

**OUTPUT PARAMETERS FOR V<sub>DD</sub> = 3.3 V ± 0.3 V**

V <sub>OH</sub>	High-level output voltage	V <sub>DD</sub> = 3 V, I <sub>OH</sub> = -0.1 mA	2.9			V
		V <sub>DD</sub> = 3 V, I <sub>OH</sub> = -8 mA	2.5			
		V <sub>DD</sub> = 3 V, I <sub>OH</sub> = -12 mA	2.2			
V <sub>OL</sub>	Low-level output voltage	V <sub>DD</sub> = 3 V, I <sub>OL</sub> = 0.1 mA			0.1	V
		V <sub>DD</sub> = 3 V, I <sub>OL</sub> = 8 mA			0.5	
		V <sub>DD</sub> = 3 V, I <sub>OL</sub> = 12 mA			0.8	
t <sub>PLH</sub> , t <sub>PHL</sub>	Propagation delay (Note 7)	CLKIN to Qn	0.8		2.0	ns
t <sub>sk(o)</sub>	Output skew (Note 7)	Equal load of each output 85°C			50	ps
		Equal load of each output 105°C			60	
t <sub>r</sub> /t <sub>f</sub>	Rise and fall time	20%–80% (V <sub>OH</sub> - V <sub>OL</sub> )	0.12		0.8	ns
t <sub>DIS</sub>	Output disable time (Note 7)	OE to Qn			6	ns
t <sub>EN</sub>	Output enable time (Note 7)	OE to Qn			6	ns
t <sub>sk(p)</sub>	Pulse skew; t <sub>PLH(Qn)</sub> - t <sub>PHL(Qn)</sub> (Note 8)	To be measured with input duty cycle of 50%			180	ps
t <sub>sk(pp)</sub>	Part-to-part skew	Under equal operating conditions for two parts			0.5	ns
T <sub>jitt(φ)</sub>	Additive jitter rms	12 kHz...20 MHz f <sub>OUT</sub> = 100 MHz			100	fs
		12 kHz...20 MHz f <sub>OUT</sub> = 156.25 MHz				

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

5. All typical values are at respective nominal V<sub>DD</sub>. For switching characteristics, outputs are terminated to 50 Ω to V<sub>DD</sub>/2 (see Figure 2).

6. This is the formula for the power dissipation calculation.

$$P_{tot} = P_{stat} + P_{dyn} + P_{Cload} [W] \quad P_{stat} = V_{DD} \times I_{DD} [W]$$

$$P_{dyn} = C_{PD} \times V_{DD}^2 \times f \times n [W]$$

$$P_{Cload} = C_{load} \times V_{DD}^2 \times f \times n [W]$$

n = Number of switching output pins

7. With rail to rail input clock.

8. t<sub>sk(p)</sub> depends on output rise- and fall-time (t<sub>r</sub>/t<sub>f</sub>). The output duty-cycle can be calculated: odc = (t<sub>w(OUT)</sub> ± t<sub>sk(p)</sub>)/t<sub>period</sub>; t<sub>w(OUT)</sub> is pulse-width of ideal output waveform and t<sub>period</sub> is 1/f<sub>OUT</sub>.

## NB3V110xC Series

Figure 7. Pulse Skew  $t_{sk(p)}$  and Propagation Delay  $t_{PLH}/t_{PHL}$

Figure 8. Rise/Fall Times  $t_r / t_f$

Figure 9. Typical NB3V110xC Phase Noise Plot at  $f_{Carrier} = 100 \text{ MHz}$ ,  $V_{DD} = 3.3 \text{ V}$ ,  $25^\circ\text{C}$

The above phase noise data was captured using Agilent E5052A/B. The data displays the input phase noise and output phase noise used to calculate the additive phase jitter at a specified integration range. The additive RMS phase jitter contributed by the device (integrated between 12 kHz and 20 MHz) is 55.94 fs. The additive RMS phase jitter performance of the fan out buffer is highly dependent on the phase noise of the input source.

To obtain the most precise additive phase noise measurement, it is vital that the source phase noise be notably lower than that of the DUT. If the phase noise of the source is greater than the noise floor of the device under test, the source noise will dominate the additive phase jitter calculation and lead to an incorrect negative result for the additive phase noise within the integration range. The Figure above is a good example of the NB3V110xC source generator phase noise having a significantly lower floor than the DUT and results in an additive phase jitter of 55.94 fs.

$$\text{Additive RMS phase jitter} = \sqrt{\text{RMS phase jitter of output}^2 - \text{RMS phase jitter of input}^2}$$

$$55.94 \text{ fs} = \sqrt{66.92 \text{ fs}^2 - 36.72 \text{ fs}^2}$$

## NB3V110xC Series

**Figure 10. Typical NB3V110xC Phase Noise Plot at  $f_{\text{carrier}} = 156.25 \text{ MHz}$ ,  $V_{\text{CC}} = 3.3 \text{ V V}$ ,  $25^\circ\text{C}$**

The additive RMS phase jitter contributed by the device (integrated between 12 kHz and 20 MHz) is 46.11 fs.

$$\begin{aligned} \text{Additive RMS phase jitter} &= \sqrt{\text{RMS phase jitter of output}^2 - \text{RMS phase jitter of input}^2} \\ 46.11 \text{ fs} &= \sqrt{51.76 \text{ fs}^2 - 23.5 \text{ fs}^2} \end{aligned}$$

Figures 9 and 10 were created with measured data from Agilent–E5052A/B Signal Source Analyzer using ON Semiconductor Phase Noise Explorer web tool. This free application enables an interactive environment for advanced

phase noise and jitter analysis of timing devices and clock tree designs. To see the performance of NB3V110xC beyond conditions outlined in this datasheet, please visit the ON Semiconductor [Green Point Design Tools](#) homepage.

ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
