### DESCRIPTION

The *ISSI* IS62C5128BL and IS65C5128BL are high-speed, 4,194,304-bit static RAMs organized as 524,288 words by 8 bits. They are fabricated using *ISSI*'s high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields access times as fast as 45ns with low power consumption.

When  $\overline{CE}$  is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down with CMOS input levels.

Easy memory expansion is provided by using Chip Enable and Output Enable inputs,  $\overline{CE}$  and  $\overline{OE}$ . The active LOW Write Enable ( $\overline{WE}$ ) controls both writing and reading of the memory. A data byte allows Upper Byte ( $\overline{UB}$ ) and Lower Byte ( $\overline{LB}$ ) access.

The IS62C5128BL and IS65C5128BL are packaged in the JEDEC standard 32-pin sTSOP-I, 32-pin SOP and 32-pin TSOP-II packages
