

heavy | mate[®]

Heavy Duty Connectors

Note from the CEO

Ladies and Gentlemen,

For over 75 years Amphenol has enjoyed success as the interconnection technology provider of choice to industry-leading companies around the world. One of our key strategic areas of focus has been and is the Industrial market. Our organization works with leading manufacturers across a wide range of applications - including Energy Generation & Distribution, Transportation, Heavy Equipment, Factory Automation, Wireless Outdoor, ChipCard Readers - enabling smarter, faster and better technologies to connect products to customer solutions.

The Industrial market footprint of Amphenol covers over facilities in more than 12 different European countries and more than 30 countries worldwide. Our successful expansion into new regions as well as new industrial applications is a direct reflection of our agile, entrepreneurial management team and our unwavering commitment to execute Amphenol's strategies for the benefit of our customers, shareholders and employees.

Thank you for partnering with Amphenol. Our entire organization is at your service.

A handwritten signature in black ink, appearing to read 'R. Adam Norwitt'. The signature is fluid and stylized, with a large initial 'R'.

R. Adam Norwitt
President and CEO, Amphenol Corporation

Make use of the best

Use our global resources

“Think global, act local!” Independently from where you are in Europe, we offer you our global expertise and great variety of products and technologies. And in comfort with your personal contact. Our numerous European offices are your access to our global resources.

● OUR OFFICES IN EUROPE AND WORLDWIDE

SECURITY, RELIABILITY AND COMFORTABLE SERVICE FROM ONE SOURCE.

More time for important things: benefit from our service and diversity

Enjoy security, reliability and comfortable service from one source. INDUSTRIAL@AMPHENOL offers one of the most individual and most diversified service programmes in the market – exclusively for industrial customers. Access all possibilities of the Amphenol group through your personal expert adviser.

WIDE PRODUCT RANGE

Take advantage of a choice of Amphenol products. Our broad product portfolio offers individual solutions from more than 85 member companies in the global Amphenol group.

EXCLUSIVENESS AND FLEXIBILITY

One face to the customer: every inquiry is handled on an individual service level by your personal key account service partner. This ensures maximum transparency and best-in-class flexibility in the whole process.

QUALITY

Interconnect systems need reliability, speed and flawless data transmission. We continuously test and guarantee the required standard in our products – and also in our personal services.

INDIVIDUAL SOLUTIONS

Your project requires an individual solution that is not available off-the-shelf? As your think tank and discussion partner we provide engineering support and solution-oriented development for your tailor-made Amphenol product.

SPEED AND AVAILABILITY

Smart and intelligent processes are the secret behind our service programme. Flexible planning and distribution, perfect logistics and highest availability are our key factors for best customer service.

GLOBAL KEY ACCOUNT SERVICE

Our key account service is your individual entrance to global know-how, products and services. More than 85 Amphenol companies around the world offer an extensive range of technologies and products. We offer access to our worldwide resources through one individual contact person.

heavy|mate[®] is a Modular Metal Connector Line

What is heavy|mate[®] ?

heavy|mate[®] is a modular connector line, consisting of:

- Hoods & Housings
- Inserts
- Contacts

Why heavy|mate[®] ?

- Connections in harsh industrial environment
- Robust design necessary
- High number of poles or different kinds of signals transmitted
- Very good EMC protection required
- Power and signal transmission outdoor
- Very save locking system required

for Applications in Industrial Environments.

Major product features

- Hybrid interconnections
- Good costs
- Voltage up to 1000V
- VDE, UL, CSA approvals
- Vibration proof
- High current
- Signal transmission
- High pole sizes
- IP65 to IP68
- Corrosion resistance
- Robust

What can heavy | mate[®] offer?

- Connectors for industrial applications indoor & outdoor
- A wide range of inserts for signal and power transmission
- A large variety in pole sizes from 3 up to 280 poles per connector
- Current ratings up to 250A per contacts and voltages up to 1000V
- A modular connector system to configure customized solutions

How to select a solution with series heavy | mate®.

Theory

- Select an insert that meets your requirements.
- Choose the related contacts if not included in inserts.
- Choose related housings.
- Choose related cable gland.
- If you are interested in a cable assembly, please ask us.

Practice 1

Requirements

- 250V
- 5A
- 60 contacts
- Termination: crimp

Solution

- Check: Make a pre-selection on the overview page of the series, s. p. 10/11
Possible series: heavy | mate® D, DD and M
- Check: Details on the overview pages of the sub-series, see pages 22, 38, 114
All 3 variants are possible; Selection heavy | mate® D
- Check: Contact inserts on the detail page of the sub-series
Selection: C146 10A064 000 2
- Check: Contacts on the same double page
Selection: VN01 016 0002 1
- Check: Housings via crosslink at contact inserts
Selection: C146 21R024 600 8
- Check: Gland bushing via crosslink at housings
Selection: VN16 320 0126X

Practice 2

Requirements

- 3 x 400V; 50A; 6mm² wire gauge
- 8 x 250V; 8A; 1.5mm² wire gauge
- 5 x 400V; 15A; 4mm² wire gauge

Solution

- **Check:** Make a pre-selection on the overview page of the series, see pages 10/11
Possible series: heavy | **mate**[®] M
- **Check:** How 16 contacts can be realized, see modules overview on page 118
Possible selection: a) 1 x 20 contacts
b) 2 x 10 contacts
c) 1 x 10 contacts + 1 x 5 contacts
d) 1 x 3 contacts + 1 x 5 contacts + 1 x 10 contacts
- **Check:** Technical parameters / solution, see detail pages of the modules on page 126
Possible selection: a) not possible due to voltage
b) not possible due to voltage
c) not possible due to current
d) POSSIBLE
- **Check:** Choose matching contact, see detail page of the modules on page 126
Possible selection: a) C146 A03 001 E8 - VN01 036 0002 1C
b) C146 A0 001 E8 - VN01 025 0033 1C
c) C146 A10 001 E8 - VN01 016 0027 1XC
- **Check:** Choose matching frame, see frames on page 124
Solution: C146 P10 001 G8
- **Check:** Choose matching housing, see housings on page 162
Solution: C146 21R010 600 8

Make your selection out of the heavy | mate® series!

The highlights of the series heavy|mate®.

Contact technology

- Turned contacts, which correspond to the market standard.
- Turned female contacts of copper for higher current-carrying capacity – specifically for the modular system heavy|mate® M.
- Radsok contact technology: These are laminated contacts with very low transition resistance, suitable for high current applications.
- Stamped contacts with high performance for semi-automatic processing at great cost savings.
- Selectively coated gold plating stamped contacts offer great savings.

Housings

Surface coatings available in two versions: Standard or High-End with a salt mist resistance up to 500 hours.

Flexible cable entry in different positions – possible on request.

Robust metal levers in 1 and 2 locking-lever-system.

Quality EMC solutions.

Tightness classes in IP65, IP67 or IP68!

Modular system

With the new series heavy|mate® F Amphenol offers a new modular system that is compatible with the market leader. With the series heavy|mate® M Amphenol offers a system with many benefits:

- More module slots in the connector.
- Large selection of contact-safe male contacts
- Stamped contacts and the Radsok contact technology
- Great cost savings potential

The background of the entire page is a high-contrast, industrial scene. It features a dark, metallic surface, possibly a machine part, with numerous bright orange and yellow sparks flying upwards and outwards. The lighting is dramatic, with strong highlights on the sparks and deep shadows in the machinery. In the upper right, there are some blue and green elements, possibly cables or parts of a machine. The overall atmosphere is one of intense industrial activity.

heavy | mate[®] A

- Rated voltage 250 / 400 V
- Rated current 14 A ... 18 A
- Termination: screw
- Number of contacts: 3, 4, 10, 16, 32

| Approvals, Testhouse | Characteristics | Approval-Number |
|--|-------------------------|-----------------|
| SEV  | 250 V, 10 A | |
| UL  | 600 V, 14 A | E 63093 |
| CSA  | 600 V, 10 A; 16 A; 20 A | LR 700721 |

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

General information

- For series heavy|mate® A connectors may be engaged or disengaged when live but without electrical load.
If these connectors are used as plug and socket device, the load shall be reduced to 10 % of the rated current.

- Low and high profile housing for heavy|mate® A series inserts for 10 and 16 contacts.

No standard for this series, but:

- Interchangeable with other makes
 - a) contact insert to contact insert
 - b) contact insert to housing 10, 16 contacts

Housings are designed according to DIN EN 175 301 - 801

First-to-mate last-to-break protective ground contact

heavy | mate[®] D

- Rated voltage 250 V
- Rated current 10 A ... 16 A
- Termination: crimp
- Number of contacts: 7, 15, 25, 40, 50, 64, 128

| Approvals, Testhouse | Characteristics | Approval-Number |
|--|---|-----------------|
| SEV  | 250 V, 10 A | |
| UL  | 600 V, 14 A 600 V, 15 A (high current) | E 63093 |
| CSA  | 600 V, 10 A | 48932 |

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

General information

- Contact inserts without crimp contacts, crimping tools see separate catalogue „Tools“.
- Contacts must be ordered separately, processing instructions see catalogue „Tools“.
- We recommend using the high profile housings / hoods for the heavy|mate® D inserts.
- Connectors series heavy|mate® D may be engaged or disengaged when live but without electrical load.
If these connectors are mated or unmated under load, the load shall be reduced to 10 % of the rated current.
- For contact inserts for turned contacts, guide pins and guide socket are recommended (see page 226).
- By using contact inserts with two PE-connections without hoods, it is necessary to connect the facing of each PE-connection.
- If connectors are mounted in non conductive housings both protective earthing terminals shall be mounted.

Standardised connectors according to DIN EN 175 301 - 801 (DIN 43652)

Interchangeable with all other products which are according to the standard.

- a) Contact insert to contact insert 15, 25, 40, 64 way.
- b) Contact insert to housing 15, 25, 40, 64 way.

High protection against mismatching

- Female inserts with funnel shaped contact entry avoids mismatching with stamped contacts.

First-to-mate last-to-break protective ground contact

A high-speed train, silver with orange and black accents, is shown from a front-quarter perspective on a track. The train is moving towards the viewer. Above the train, a complex network of overhead power lines and support structures is visible, extending into the distance. The background consists of green trees and a clear sky. The train's front features a large windshield and two sets of headlights. The tracks are made of steel rails on a gravel bed.

heavy | mate[®] E

- Rated voltage 500 V
- Rated current 16 A ... 22 A
- Termination: screw, crimp, tension spring
- Numbers of contacts: 6, 10, 16, 24, 48

| Approvals, Testhouse | Characteristics | Approval-Number |
|----------------------|-----------------|-----------------|
| SEV | 400 V, 16 A | |
| UL | 600 V, 16 A | E 63093 |
| CSA | 600 V, 16 A | 48932 |

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

General information

- Contact inserts without crimp contacts.
- Connectors series heavy|mate® E may be engaged or disengaged when live but without electrical load. If these connectors are mated or unmated under load, the load shall be reduced to 10 % of the rated current.
- Crimping tools and processing instructions see separate catalogue „Tools“.
- Low and high profile housings are usable.
- If wire ferrule are used, screw terminals without wire protection are preferred.

No standard for this series, but:

Interchangeable with other products

- a) contact insert to contact insert 6, 10, 16, 24 contacts
- b) contact insert to housing 6, 10, 16, 24 contacts

Housings are designed according to DIN EN 175 301 - 801

First-to-mate last-to-break protective ground contact

Contact inserts for screw termination, screw termination with wire protection and for crimp termination

Screw termination

Screw termination with wire protection

The background image shows a large industrial facility with a high ceiling, blue structural beams, and several large, teal-colored industrial machines. The machines are arranged in a line, and the floor is a light-colored concrete. The lighting is bright, with several overhead lights visible. The overall scene is a clean, organized industrial environment.

heavy | mate[®] E / FE / KO

- Rated voltage 400 V
- Material contacts: iron-constantan
- Rated current 10 A
- Number of contacts: 6, 10, 16, 24

Connectors with iron (FE) and constantan (CO) contacts

are basically used in measuring and control circuits to serve as interface between FE/CO thermocouples and control unit, i. e. temperature control of moulds in injection moulding machines. Through the use of FE/CO connectors in the thermocouple circuit the measuring results are more accurate, thus the tolerance of the temperature control is much narrower.

Amphenol's Industrial Connectors with iron (FE) and Constantan (CO) contacts are used to connect FE/CO thermocouples with electronic signal amplifiers in measuring and control circuits, i. e. for temperature control of moulding machines.

Errors with various combinations

The connection of unlike metals (FE/Brass and CO/Brass) generate thermoelectric voltage errors in the measuring circuit caused by the flow from iron wire to the brass contact or by temperature changes at the contact elements.

| Nominal Temp. | Contact Material | without Thermo Contacts | | with Thermo Contacts | |
|---------------|------------------|-------------------------|----------|----------------------|---------|
| | | MS/FE | MS/KO | FE/FE | KO/KO |
| 100 °C | | + 4 % | - 16 % | - 4 % | - 2 % |
| 200 °C | | + 2.5 % | - 8 % | - 3 % | - 1.5 % |
| 300 °C | | + 1.3 % | - 12.7 % | - 1.3 % | 0 % |
| 400 °C | | + 1.5 % | - 4.5 % | - 1.0 % | 0 % |

By using FE/CO contacts respectively these deviations will be minimized.

Material / Temperature Range

| Temperatur range | Material/measurement procedure |
|--------------------------|---------------------------------|
| < 150 °C | any/Resistance measurement |
| 150 °C - 450 °C | FE-CO (iron/Constantan) |
| 450 °C - approx. 1000 °C | Ni/Cr-Ni (Nickel/Chrome/Nickel) |

Temperature changes cause errors

heavy | mate[®] F

- **Modular connector**
- **Compatible with market standard**
- **Rated voltage up to 830 V**
- **Rated current up to 40 A**
- **Termination: crimp**
- **Numbers of contacts: 2 - 102**

| Approvals, Testhouse | Characteristics | Approval-Number |
|--|-----------------|-----------------|
| UL  | in preparation | in preparation |
| CSA  | in preparation | in preparation |

General information

- Modules inserts without crimp contacts, crimping tools see separate catalogue “Tools”.
- Contacts must be ordered separately, processing instructions see catalogue “Tools”.
- Connectors series heavy|mate® F may be engaged or disengaged when live but without electrical load.
If these connectors are mated or unmated under load, the load shall be reduced to 10 % of rated current.
- We recommend using the high profile housings / hoods for the heavy|mate® F inserts.
- Empty modul spaces have to be filled with blind modules.
- Torque for PE connection 1.2 Nm

Advantages of the system

- No standard but interchangeable with competitive products.
- Housings are designed according to DIN EN 175 301 801
- Simply connecting of the modules and frames.

First-to-mate last-to-break protective ground contact

Range of housings

Size E6

Size E10

Size E16

Size E24

Size E48

Requirements

- 3 x 400V; 50A; 6mm² wire gauge
- 8 x 250V; 8A; 1.5mm² wire gauge
- 5 x 400V; 15A; 4mm² wire gauge

Solution

1. Check how 16 contacts can be realized; see modules overview on page 78

Possible selection:

- a) 1 x 17 contacts
- b) 2 x 12 contacts
- c) 1 x 6 contacts + 1 x 12 contacts
- d) 1 x 3 contacts + 1 x 6 contacts + 1 x 12 contacts

2. Check technical parameters / solution, see detail pages of the modules from page 82

Possible selection:

- a) not possible due to voltage
- b) not possible due to voltage
- c) not possible due to current
- d) POSSIBLE

3. Choose matching contact, see detail page of the modules on page 82

Possible selection:

- a) 3 contacts = C146 10A003 500 15 → contacts = VN01 040 0013 1C
- b) 6 contacts = C146 10A006 500 15 → contacts = VN01 025 0039 1C
- c) 12 contacts = C146 10A012 500 15 → contacts = VN01 016 0027 1C

4. Choose matching frame, see frames on page 80

Solution: C146 10P10 000 15

5. Choose matching housing, see housings on page 162

Solution: C146 21R010 600 8

The image shows a large industrial testing chamber, likely a high-voltage or high-current test cell. It is enclosed in a safety cage made of aluminum extrusion and safety glass. The chamber has a blue and white color scheme. A computer monitor is mounted on the front panel, displaying a software interface. The floor is made of perforated metal plates with yellow safety lines. The ceiling has exposed ductwork and lighting fixtures.

heavy | mate[®] HvE

- Rated voltage 660 V
- Rated current 16 A ... 22 A
- Termination: screw
- 2 delayed mating contacts
- Number of contacts: 3, 6, 10, 16, 20, 26, 32

| Approvals, Testhouse | Characteristics | Approval-Number |
|--|-----------------|-----------------|
| UL  | 600 V, 16 A | E 63093 |
| CSA  | 600 V, 16 A | 48932 |

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

Construction of connectors Type HVE

The connectors of series heavy|mate® HVE are based on series heavy|mate® E with the following deviations:

Inserts

The HVE-inserts with 3, 6 and 10 contacts are basically the same as the 10, 16 and 24-contacts inserts of series heavy|mate® E. However they are only partly loaded with contacts and have two delayed mating pilot duty contacts.

Only type 16 HVE has special inserts with a different contact arrangement. The mounting dimensions are however identical with the 24 contacts version of heavy|mate® E.

The delayed mating contacts are intended for switching a relay coil for electrically locking in order to have unloaded socket contacts in an unmated condition.

If connectors without breaking capacity are used as connectors with breaking capacity the electrical power data must be reduced in accordance with the manufacturer's specification. These specifications are available from the manufacturer.

heavy|mate® E inserts with pin contacts are not intermatable with heavy|mate® HVE inserts with socket contacts due to

- two empty contact holes are closed at 3, 6 and 10 contact inserts.
- the 16 contacts HVE insert has a different contact arrangement.

Housings: (made of aluminium)

heavy|mate® E housings with an inside insulation (plastic foil) are used for the 16-contacts insert.

The inside barriers at the narrow sides preventing mounting of 660 V-inserts in 400 V housings are removed and the 16-contacts insert is now mountable.

No standard for this series, but:

Intermatable and exchangeable with other makes

- Contact insert to contact insert
- Contact insert to housing 6, 10, 16, 24 pin

Housings are designed according to DIN EN 175 301-801

First-to-mate last-to-break protective ground contact

| CSA  | | 48932 |

In general approvals refer to representative versions of the connector series. Extent and specification of tests upon request.

General information

- Modules inserts without crimp contacts, crimping tools see separate catalogue "Tools".
- Contacts must be ordered separately, processing instructions see catalogue "Tools".
- Connectors series heavy|mate® M may be engaged or disengaged when live but without electrical load. If these connectors are mated or unmated under load, the load shall be reduced to 10 % of rated current.

- We recommend using the high profile housings / hoods for the heavy|mate® M inserts.
- Empty modul spaces have to be filled with blind modules.
- Torque for PE connection 1.8 Nm

Advantages of the system

- High combination possibilities
- Possibility of inverse configuration
- Rated voltage up to 1000 V
- Low cost

First-to-mate last-to-break protective ground contact

Minimum wire size 0.5 mm²

Modules

Frames

Range of housings

Requirements

- 3 x 400V; 50A; 6mm² wire gauge
- 8 x 250V; 8A; 1.5mm² wire gauge
- 5 x 400V; 15A; 4mm² wire gauge

Solution

1. Check how 16 contacts can be realized; see modules overview on page 118

Possible selection:

- a) 1 x 20 contacts
- b) 2 x 10 contacts
- c) 1 x 10 contacts+ 1 x 5 contacts
- d) 1 x 3 contacts + 1 x 5 contacts + 1 x 10 contacts

2. Check technical parameters / solution, see detail pages of the modules on pag 126

Possible selection:

- a) not possible due to voltage
- b) not possible due to voltage
- c) not possible due to current
- d) POSSIBLE

3. Choose matching contact, see detail page of the modules on page 126

Possible selection:

- a) 3 contacts = C146 A03 001 E8 → contacts = VN01 036 0002 1C
- b) 5 contacts = C146 A05 001 E8 → contacts = VN01 025 0033 1C
- c) 10 contacts = C146 A10 001 E8 → contacts = VN01 016 0027 1XC

4. Choose matching frame, see frames on page 124

Solution: C146 P10 001 G8

5. Choose matching housing, see housings from page 162

Solution: C146 21R010 600 8

Derating Curves

General requirements

- Due to reduced cross sections at PE contacts of frames, the PE contact has to be additionally protected against short circuits by using a protection circuit offering a sufficiently short breaking time (<0.25s).
- Parts to be used as connectors, not as plug devices (connector with breaking capacity). Do not mate under current or voltage!

Brief information

- For integration of standard RJ45 components
- Worldwide real-time access on machines and facilities
- Easy assembly through the use of standard RJ45 components
- One connector for power, signal and data transmission
- 4 additional power crimp contacts
- Time- and money saving through the use of similar active- and passive components
- Unitary transmission protocol in the office- and production environment.
- Meets CAT 5 for Ethernet acc. ISO/IEC 11801

| General Characteristics | Standard | Value module | Value RJ45 |

Brief information

- Power, signal and pneumatic within a single connector
- Very stable brass contacts
- Pneumatic socket contacts with barrier, closes when the connector is open
- Available with single or double connections
- Connection for 2.5 mm or 4 mm PTFE (Teflon)-tubes
- Tubes can be disassembled from the terminations

| General Characteristics | Standard | Value |
|----------------------------|----------|-----------------------------------|
| Number of contacts | | 1 / 2 |
| Termination technique | | tube termination |
| Wire gauge | | 2.5 mm / 4.0 mm |
| Flammability | UL 94 | V-0 |
| Technical Characteristics | | |
| Operating pressure | | 8 bar with PTFE tube |
| Operating path | | 4.0 mm |
| Locking | | locking on one side |
| Pneumatic tube | | only use PTFE tubes ¹⁾ |
| Climatical Characteristics | | |

heavy | mate[®] Housings

Available Types

- Standard-Housings IP65
- Housings in IP67 and IP68
- EMC-Housings
- Corrosion resistant Housings

General information

- The connectors of our heavy|mate® series are designed for use in machine tools, general electric installations and applications as well as for industrial control and other electrical equipment. Other applications than the above mentioned are in the responsibility of the user.
- For cable to cable connections a suitable cable clamp has to be used.
- The indicated dimensions with the panel cut-outs represent reference values and are in the concrete application with products to be co-ordinated.
- The sealing area of the housing has to be level and free of burrs.
- Housings in accordance with DIN EN 175 301 - 801 (DIN 43 652) .

General information

- conductive surface
- standard locking levers
- same housing dimensions like standard housings
- two housing sizes
- with or without ground strap
- high attenuation
- protection class IP 65
- mating cycles > 500

Concept

Range of housings in two housing sizes

Version A
Standard flange without ground strap

Version B
Standard flange with ground strap

Version C
Centering flange with ground strap

heavy|mate® Housings corrosion resistant Characteristics + Notes

| General Characteristics | Standard | Value |
|----------------------------|---------------------|----------------------------|
| Protection class housing | | IP 65 |
| Locking system | | 2 locking levers |
| Salt mist resistance | IEC 60512-11-6:2002 | >500h |
| Climatical Characteristics | | |
| Climatic category | IEC 60068-1 | 40 / 125 / 21 |
| Temperature range | IEC 60068-1 | - 40 °C / + 125 °C |
| Upper temperature | IEC 60512-11-9 | + 125 °C |
| Lower temperature | IEC 60512-11-10 | - 40 °C |
| Mechanical Characteristics | | |
| Mechanical operation | IEC 60512-9-1 | ≥ 500 mating cycles |
| Materials | | |
| Housings | | Aluminium die cast alloy |
| Colour housings | | grey, RAL 9005 |
| Rubber gasket | | NBR |
| Locking lever | | steel / special coated |
| Surface | | conducting special surface |

Wichtige Hinweise

500h salt mist resistance can be achieved when using a plastic cable gland.

When a metal cable gland is required, we recommend to use additionally our special studs on the hoods to achieve this value.

Order codes are:

[N16 025 0112 5X](#) Metal stud M25 corrosion resistant

[N16 032 0112 5X](#) Metal stud M32 corrosion resistant

[N16 040 0112 5X](#) Metal stud M40 corrosion resistant

- Cable seals with cable clamp
- Key pin
- Guide pin / bush
- D-Sub adaptors
- Foam rubber sealing
- Label for CSA regulation

Assembly instructions for metric clamp

- The cable jacket should be removed as far as the underside of the cable clamping; the wire netting is then to be cut down a little further and subsequently must be formed into a circular rim. The protective jacket can remain attached to the cable provided that it passes through the lower opening of the clamp.
- On assembly, while screwing the cable clamp, the circular rim has to be pushed through and pressed on the fins commutator on the base of the underside and settle into a depression. By doing this the EMC security will remain.

General technical information

- The Safty of connectors/connectors with braking capacity (CBC) depends on the right selection of products, the correct installation and a proper assembly.
- Decisions for the application of connectors are the requirements of the equipment specifications. This is especially the case for the definition of the rated voltage and the related clearances and creepage distances.
- All rated data for the connectors listed in this catalogue is based on overvoltage category III and pollution degree 3 (machine tool application).
- All technical data is specified for connectors, which are not under load when mated or disconnected. If in special cases connectors can be used in the sense of plug and socket devices (connector with breaking capacity), this is mentioned in the brief information of the particular section.
- Correct mounting will protect against electrical shock when mating the connectors.
- It connectors are mounted in non conductive housings both protective earthing terminals shall be mounted.
- A detailed connector glossary can be found at the end of this catalogue.
- All mentioned excerpts of standards are for general information only. For specific cases the valid original standards have to be consulted.
- Test methods acc. IEC 60512 camply with test methods acc. DIN EN 60512 or DIN IEC 60512. IEC 60664-1 complies with DIN VDE 0110-1

Termination methods: Screw connection

Screw clamps are designed acc. to EN 60999-1/VDE 0609. Chart 1 below shows the screw size depending on wire size and the required clamping and testing torque.

Chart 1

| | | | | | | |
|-----------------------------------|-------|-----|-----|-------|-----|-----|
| Wire size (mm²) | 1 | 1.5 | 2.5 | 4 | 6 | 10 |
| Screw size | M 2.6 | M 3 | M 3 | M 3.5 | M 4 | M 4 |
| Test torque (Ncm) | 40 | 50 | 50 | 80 | 120 | 120 |

Diagram 1 below shows the range of tensile strength for a screw connection with a clamp screw M3, fastened with a torque of 50 Ncm, depending on the wire size.

Diagram 1

Crimp connection **Chart 2: Tensile strength for crimp connetions**

A crimp connection is a non-detachable electrical connection between a wire and a crimp contact produced with the crimp technology. Precise crimping dies are matched to the crimp barrel and the wire size and a defined deformation results in a reliable electrical connection. There are open barrels (stamped contacts) and closed crimp barrels (turned contacts).

The main advantages of crimp connections are:

- Efficient termination of contacts.
- Reproduceable electrical and mechanical figures by a constant crimp quality.

(A detailed description of the crimp technology can be found in our catalogue "tools").

The requirements for crimp connections are defined in DIN EN 60352-2.

An important point for the quality of a crimp connection is the achieved tensile strength of the termination. Measuring the tensile strength is a practicable means for quality control purposes. Chart 2 below shows the required minimum tensile strength for open and closed barrels according to the wire size.

| Wire size | | Tensile strength |

| 4.0 mm ² | 56 x 0.30 | 2.8 mm |
| 6.0 mm ² | 19 x 0.64 | 3.4 mm |
| 10 mm ² | 19 x 0.80 | 4.3 mm |

Current carrying capacity

The current carrying capacity of a connector is shown by a derating curve. The curve shows the currents that the connector can carry continuously and simultaneously through all its contacts. The curve is determined by testing following the standard DIN EN 60512. The upper temperature is limited by the contact and insulation material used. The sum of the ambient temperature and the temperature created by the current flow may not exceed the upper temperature. This means that the current carrying capacity has no fixed value but decreases with increasing ambient temperatures.

As a general example it can be said that a given connector which can carry 16A through all its contacts at 40°C ambient temperature can carry less, e.g. 12A, at an ambient temperature of 80°C. On the other hand it is often the case that not all contacts carry the whole rated current, which means that some single contacts may carry a higher current than that according to the derating curve. These currents have to be defined by testing.

Diagram 3: Typical derating curve

Chart 5: Current carrying capacity of copper wires in (A)

| Installation type | Wire size (mm ²) | 0.25 | 0.34 | 0.5 | 0.75 | 1 | 1.5 | 2.5 | 4 | 6 | 10 |
|--|------------------------------|------|------|-----|------|------|------|------|----|----|----|
|  B1 Wires in conduits and installation channels | | - | - | - | 7.6 | 10.4 | 13.5 | 18.3 | 25 | 32 | 44 |
|  B2 Cables and conductors in conduits or installation channels | | - | - | - | - | 9.6 | 12 | 16.5 | 23 | 29 | 40 |
|  C Cables and conductors along walls | | 4.0 | 5.0 | 7.1 | 9.1 | 11.7 | 15.2 | 21 | 28 | 36 | 50 |
|  E Cables and conductors on plank | | 4.0 | 5.0 | 7.1 | 9.1 | 11.5 | 16.1 | 22 | 30 | 37 | 52 |

Description according to DIN EN 60204 for PVC insulated copper wires with a working temperature of +40C. For other requirements,

such as for other temperatures, mountings, or wires corresponding correction factors are used (see next page).

Reduction values

The values in chart 5 are based on an ambient temperature of 40 °C. For other ambient temperatures the values have to be adjusted using the correction values of chart 6 below.

For installations with many cables and conductors under load the current carrying capacity is reduced according to the two following charts 7 and 8.

Chart 6

| Ambient temperature (°C) | Correction value |
|--------------------------|------------------|
| 30 | 1.15 |
| 35 | 1.03 |
| 40 | 1.00 |
| 45 | 0.91 |
| 50 | 0.82 |
| 55 | 0.71 |
| 60 | 0.58 |

Chart 7: Reduction values for accumulated conductors

| Installation type | Number of cables and conductors / pairs under load | | | |
|---|--|------|------|------|
| | 2 | 4 | 6 | 9 |
| Threephase cable and conductor | | | | |
| B1 and B2 | 0.80 | 0.85 | 0.87 | 0.86 |
| C | 0.65 | 0.75 | 0.78 | 0.76 |
| E-one row | 0.57 | 0.72 | 0.75 | 0.72 |
| E-multi row | 0.50 | 0.70 | 0.73 | 0.88 |
| DC conductor (pair), independent of installation type | 1.0 | 0.76 | 0.64 | 0.43 |

Chart 8: Reduction values for multicore cable and conductors up to 10mm²

| Number of conductors (pairs) under load | AC (conductor > 1 mm²) | DC (Pairs 0,2 to 0,75 mm²) |
|---|------------------------|----------------------------|
| 5 | 0.75 | 0.52 |
| 7 | 0.65 | 0.45 |
| 10 | 0.55 | 0.39 |
| 24 | 0.40 | 0.27 |

Conductors of control circuits generally do not need a reduction.

Impulse current carrying capacity

A surge can happen to a connector and its contacts by an impulse current, e.g. through a short circuit in the system or by switching operations. The short-timed high current heat cannot be transferred outside fast enough so the contacts are stressed by the high temperature which in the worst case can lead to a local weld.

The robust design of our connectors prevents most damage by impulse currents.

The diagram 4 below can be used as a guideline.

Chart 4: Impulse current carrying capacity of single contacts

| Curve No. | Connector style | Curve No. | Connector style |
|-----------|--|-----------|--|
| 1 | heavy mate® E or A with screw contact | 3 | heavy mate® S with stamped crimp contact |
| 2 | heavy mate® E with stamped crimp contact | 4 | heavy mate® D with stamped crimp contact |

Voltage grading of connectors

General

Clearances and creepage distances are the base for voltage grading of connectors. Valuation and dimensioning of clearances and creepage distances have changed since the introduction of insulation coordination.

Insulation coordination comprises the selection of the electrical insulation performances of the equipment, taking into account the expected use and its environment.

The following standards apply for this:

IEC 60664-1/10.92
Insulation coordination for equipment within low-voltage systems

DIN VDE 0110-1/4.97
Isolationskoordination für elektrische Betriebsmittel in Niederspannungsanlagen

Clearances

The clearance is the shortest distance in air between two conductive parts. An important point for the dimensioning of clearances is the determination of the overvoltage category. The above standard specifies the possible overvoltages into the four following categories:

Overvoltage category I

Equipment intended for the use in appliances or parts of installations in which no overvoltage can occur. Examples are low-voltage equipments.

Overvoltage category II

Equipment intended for the use in installations or parts of it in which lightning overvoltages do not need to be considered, but switching overvoltages generated by the equipment do need to be considered. Examples are household appliances.

Overvoltage category III

Equipment intended for the use in installations or parts of it in which lightning overvoltages do not need to be considered, however switching overvoltages generated by the equipment, and for cases where the reliability and the availability of the equipment or its dependent circuits are subject to special requirements. Examples are protecting means, switches and sockets.

Overvoltage category IV

Equipment intended for the use in installations or parts of it in which lightning overvoltage has to be considered. Examples are electricity meters, overcurrent protection switches.

Once the overvoltage category has been defined the rated impulse withstand voltage can be selected for the equipment based on the nominal voltage of the supply system and the overvoltage category using chart 9 below:

Chart 9

| Nominal voltage of the supply system in V (based on IEC 60038) | Rated impulse voltage in kV for overvoltage category | | | |
|--|--|-----|-----|-----|
| | IV | III | II | I |
| Three phase systems | IV | III | II | I |
| 230/400 277/480 | 6 | 4 | 2,5 | 1,5 |
| 400/690 | 8 | 6 | 4 | 2,5 |
| 1000 | 12 | 8 | 6 | 4 |

After the rated impulse withstand voltage has been selected the pollution degree must be defined taking the expected pollution around the equipment into account.

The following four degrees of pollution are established:

Pollution degree 1

No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

Pollution degree 2

Only non-conductive pollution occurs except occasionally a temporary conductivity caused by condensation is to be expected.

Pollution degree 3

Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.

Pollution degree 4

The pollution generates persistent conductivity caused by conductive dust or by rain or snow.

It has to be noted that for a connector or plug and socket device with a degree of protection of min. IP 54 the parts inside the enclosure may be dimensioned for a lower pollution degree. This also applies to mated connectors which enclosure is ensured through the connector housing and which may only be disengaged for test and maintenance purposes.

When impulse withstand voltage and the pollution degree are defined the minimum clearances can be selected from chart 10.

Chart 10

| Impulse withstand voltage in kV | Minimum clearances in air in mm up to 2000 m above sea level | | | | | | | |
|---------------------------------|--|------|-----|-----|----------------------------|------|------|------|
| | Case A (non homogeneous field) | | | | Case B (homogeneous field) | | | |
| | Pollution degree | | | | Pollution degree | | | |
| | 1 | 2 | 3 | 4 | 1 | 2 | 3 | 4 |
| 0.33 | 0.01 | 0.2 | 0.8 | 1.6 | 0.01 | 0.2 | 0.8 | 1.6 |
| 0.40 | 0.02 | | | | 0.02 | | | |
| 0.50 | 0.04 | | | | 0.04 | | | |
| 0.60 | 0.06 | | | | 0.06 | | | |
| 0.80 | 0.10 | | | | 0.1 | | | |
| 1.0 | 0.15 | | | | 0.15 | | | |
| 1.2 | 0.25 | 0.25 | | | 0.2 | | | |
| 1.5 | 0.5 | 0.5 | | | 0.3 | 0.3 | | |
| 2.0 | 1.0 | 1.0 | 1.0 | | 0.45 | 0.45 | | |
| 2.5 | 1.5 | 1.5 | 1.5 | | 0.6 | 0.6 | | |
| 3.0 | 2 | 2 | 2 | 2 | 0.8 | 0.8 | | |
| 4.0 | 3 | 3 | 3 | 3 | 1.2 | 1,2 | 1.2 | |
| 5.0 | 4 | 4 | 4 | 4 | 1.5 | 1.5 | 1.5 | |
| 6.0 | 5.5 | 5.5 | 5.5 | 5.5 | 2 | 2 | 2 | 2 |
| 8.0 | 8 | 8 | 8 | 8 | 3 | 3 | 3 | 3 |
| 10 | 11 | 11 | 11 | 11 | 3.5 | 3.5 | 3.5 | 3.5 |
| 12 | 14 | 14 | 14 | 14 | 4.5 | 4.5 | 4.5 | 4.5 |
| 15 | 18 | 18 | 18 | 18 | 5.5 | 5.5 | 5.5 | 5.5 |
| 20 | 25 | 25 | 25 | 25 | 8 | 8 | 8 | 8 |
| 25 | 33 | 33 | 33 | 33 | 10 | 10 | 10 | 10 |
| 30 | 40 | 40 | 40 | 40 | 12.5 | 12.5 | 12.5 | 12,5 |
| 40 | 60 | 60 | 60 | 60 | 17 | 17 | 17 | 17 |
| 50 | 75 | 75 | 75 | 75 | 22 | 22 | 22 | 22 |
| 60 | 90 | 90 | 90 | 90 | 27 | 27 | 27 | 27 |
| 80 | 130 | 130 | 130 | 130 | 35 | 35 | 35 | 35 |
| 100 | 170 | 170 | 170 | 170 | 45 | 45 | 45 | 45 |

When defining the minimum clearances for connectors generally the values of the inhomogeneous field can be chosen or the required clearance has to be defined by a voltage test.

Creepage distances

The creepage distance is the shortest distance along the surface of the insulating material between two conductive parts. For the dimensioning of the creepage distance the following factors are taken into account: the rated voltage, the pollution degree and the tracking formation of the insulating material.

The materials are separated into four groups according to their CTI values (Comparative Tracking Index):

- Material group I 600 ≤ CTI
- Material group II 400 ≤ CTI < 600
- Material group IIIa 175 ≤ CTI < 400
- Material group IIIb 100 ≤ CTI < 175

The minimum creepage distances can be selected from chart 11 .

Chart 11

| U-eff Rated vol- tage U in V | Min. creepage distance in mm | | | | | | | | | | | | | | | | | |
|---------------------------------------|------------------------------|-------|--------------------|---------------|------|------|----------------|--------------------|------|------|----------------|--------------------|------|------|--------------------|--|--|--|

Connectors in this catalogue are allocated to fixed rated voltages which apply to the machine building industry. In case of other applications the above chart can be used to determine other rated voltages.

Degree of protection

Electrical connector devices have to be protected for safety reasons from outside influences like dust, foreign objects, direct contact, moisture and water. This protection is provided on industrial connectors by the housing latching devices and sealed cable entries. The degree of protection depends on the type of intended use. The standard IEC 60529 and/or DIN EN 60529 has specified the degree of protection and divided them into several classes.

The degree of protection is indicated in the following way: IP 65
 Code letters (Internat. Protection) _____
 1st charact. numeral (degree of protection against access to hazardous parts and against solid foreign objects)
 2nd charact. numeral (degree of protection against ingress of water)
 The following charts 12 an13 give an overview about all protection degrees.

| Chart 12 | | | Chart 13 | | |
|----------------------|---|--|----------------------|---|--|
| 1st charact. numeral | Brief description | Definition | 2nd charact. numeral | Brief description | Definition |
| 0 | Non-protected | – | 0 | Non-protected | – |
| 1 | Protected against access to hazardous parts with the back of a hand. Protected against solid foreign objects of $\geq 50\text{mm } \varnothing$. | The probe, sphere of $50\text{mm } \varnothing$, shall not fully penetrate and shall have adequate clearance from hazardous parts. | 1 | Protected against vertically falling water drops | Vertically falling drops shall have no harmful effects. |
| 2 | Protected against access to hazardous parts with a finger. Protected against solid foreign objects of $\geq 12,5\text{mm } \varnothing$. | The jointed test finger of $12\text{mm } \varnothing$, 80mm length, shall have adequate clearance from hazardous parts. The probe, sphere of $12,5\text{mm } \varnothing$, shall not fully penetrate. | 2 | Protected against vertically falling water drops when enclosure tilted up to 15° | Vertically falling drops shall have no harmful effects when the enclosure is tilted at any angle up to 15° . |
| 3 | Protected against access to hazardous parts with a tool. Protected against solid foreign objects of $\geq 2,5\text{mm } \varnothing$. | The probe of $2,5\text{mm } \varnothing$ shall not penetrate at all. | 3 | Protected against spraying water | Water sprayed at any angle up to 60° shall have no harmful effects. |
| 4 | Protected against access to hazardous parts with a wire. Protected against solid foreign objects of $\geq 1\text{mm } \varnothing$. | The probe of $1\text{mm } \varnothing$ shall not penetrate at all. | 4 | Protected against splashing water | Water splashed against the enclosure from any direction shall have no harmful effects. |
| 5 | Protected against access to hazardous parts with a wire. Dust-protected. | The probe of $1\text{mm } \varnothing$ shall not penetrate. Intrusion of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the device or to impair safety. | 5 | Protected against water jets | Water projected in jets against the enclosure from any direction shall have no harmful effects. |
| 6 | Protected against access to hazardous parts with a wire. Dust-tight. | The probe of $1\text{mm } \varnothing$ shall not penetrate. No intrusion of dust. | 6 | Protected against powerful water jets | Water projected in powerful jets against the enclosure from any direction shall have no harmful effects. |
| | | | 7 | Protected against the effects of temporary immersion in water | Intrusion of water in quantities causing harmful effects shall not be possible when the enclosure is temporarily immersed in water for 30 min. in 1m depth. |
| | | | 8 | Protected against the effects of continuous immersion in water | Intrusion of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions which shall be agreed between manufacturer and user but which are more severe than for numeral 7. |
| | | | 9K ¹⁾ | Protected against water during high pressure/steam jet cleaning | Water projected in powerful jets with high pressure and heat against the enclosure from any direction shall have no harmful effects. |

Cable

For the termination of all Amphenol-industrial connectors we recommend the use of commercially available high flexible cable acc. to VDE or other local specifications. Our connectors are designed to fit these cables especially as far as number of conductors and cable diameters are concerned.

When selecting cables care must be taken that the cables do not affect (solvent) the connector or preserve an existing fire resistance.

Sealing

The sealing of the cable entries of all Amphenol-industrial connectors is with gland bushings. All sealings are made from Neoprene which has a good resistance against grease, oil and gasoline.

Selection of gland bushings

Beside glands with a fixed inside diameter which equals the number, there are also glands with variable inside diameters available (so-called onion glands). The inside diameter of these glands can be adjusted to the outside cable diameter by cutting out the smaller rings.

The selection of the appropriate gland bushing depends on the cable diameter (cable composition) can be made using the following diagram 5 (see page XXX).

Diagram 5

| <p>Insertion or withdrawal force</p> <p>The force required to fully insert or withdraw a set of mated connectors without the effect of coupling, locking or similar devices. The insertion force is usually greater than the withdrawal force.</p> | <p>Material group</p> <p>Classification of insulation materials according to their CTI values (CTI = Comparative Tracking Index)</p> |
| <p>Insulation grip</p> <p>The area of a crimp contact that has been reshaped around the insulation of the conductor by compression during the crimping operation.</p> | <p>Overvoltage category</p> <p>A numeral defining a transient overvoltage condition. Overvoltage categories I, II, III and IV are used.</p> |
| <p>Insulation resistance</p> <p>The resistance of the insulation between two conductive elements, in particular, the resistance between two contacts or between a contact and a metallic housing or shield. Tested according to test 3a of IEC 60512-2 / DIN IEC 60512 Part 2.</p> | <p>Connector with braking capacity (CBC)</p> <p>A component which may be engaged or disengaged in normal use, when live or under load. Note: In the sense of this document the term - live- is used if contacts are under voltage not necessarily with a current flowing across the contacts. The term - load - is used if a current is flowing across the contacts.</p> |
| <p>Intermateable</p> <p>Two connectors are intermateable when they are capable of being connected electrically and mechanically but without regard to their performance and intermountability.</p> | <p>Rated current</p> <p>A current value assigned by the manufacturer which the connector or PSD can carry continuously (without interruption) and simultaneously through all its contacts wired with the largest conductor preferably at an ambient temperature of 40 °C without the upper temperature being exceeded.</p> |
| <p>Locator</p> <p>In a crimping tool the device used for positioning a crimp contact or terminal end.</p> | <p>Shield, shielding</p> <p>Shielding of internal or external electric fields by means of a plane with a uniform electric potential, formed by metal shells or metallic layers on the inside or outside of plastic shells. The shield is normally connected to the shielding braid of the cable and/or chassis ground.</p> |
| <p>Locking lever</p> <p>A mechanical locking device operated by actuating a lever, designed to hold two mated connectors together. Typically the lever can only be fully locked if the two connectors are correctly mated.</p> | <p>Terminal block</p> <p>An assembly of terminals in a housing or body of insulating material to facilitate interconnection between multiple conductors. Also called terminal strip or barrier blocks if the terminals are separated by an insulation barrier.</p> |
| <p>Mating cycle</p> <p>One mating cycle comprises one insertion and one withdrawal operation. Term used in the definition of connector life.</p> | <p>Wire range</p> <p>The range of wire cross sections which is compatible with the dimensions the terminals of the contact (wire barrel). The wire range is expressed in mm² or in AWG numbers.</p> |

Time saving through the introduction of stamped contacts

Wiring costs of different contacts

Break Even at about 60.000 contacts per year

| | |
|-------------------------|---------|
| General conditions | |
| Maturity (Depreciation) | 5 years |
| Interest | 8 % |
| Maintenance | 5 % |
| Hourly wages | 20 € |

Non binding declarations are based on experienced values.

Your engineering sales representative:

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
