GENERAL DESCRIPTION

This user guide details the operation of the EVAL-AD5323DBZ evaluation board for the AD5323. The AD5323 is a dual-channel, voltage output digital-to-analog converter (DAC).

The EVAL-AD5323DBZ evaluation board helps users quickly prototype new AD5323 circuits and reduce design time. The AD5323 operates from a single 2.5 V to 5.5 V supply.

The EVAL-AD5323DBZ interfaces with the USB port of a PC via the SDP-B controller board. Software is supplied with the evaluation board to allow the user to program the AD5323.

The EVAL-AD5323DBZ evaluation board requires the SDP-B controller board, which is available for order on the Analog Devices, Inc., website at www.analog.com.

Full specifications for the AD5323 are listed in the AD5323 data sheet available from Analog Devices and should be consulted in conjunction with this user guide when using the evaluation board.

EVALUATION BOARD HARDWARE

POWER SUPPLIES

The *nano*DAC® EVAL-MBnanoDAC-SDZ motherboard supports single and dual power supplies.

Power the EVAL-AD5323DBZ evaluation board from either the SDP-B port or externally by the J5 and J6 connectors, as described in Table 1.

Both the AGND and DGND inputs are provided on the EVAL-AD5323DBZ evaluation board. The AGND and DGND planes are connected at one location on the EVAL-MBnanoDAC-SDZ. It is recommended that AGND and DGND do not connect elsewhere in the system to avoid ground loop problems.

All supplies are decoupled to ground with a 10 µF tantalum capacitor and a 0.1 µF ceramic capacitor.

Table 1. Power Supply Connectors

Connector	Label	Voltage
J5, Pin 1 (J5-1)	VDD	Analog positive power supply, V_{DD}; 5.5 V single and dual supply
J5, Pin 2 (J5-2)	AGND	Analog ground
J5, Pin 3 (J5-3)	VSS	Analog negative power supply, V_{SS}; −5.5 V dual supply
J5, Pin 1 (J6-1)	VLOGIC	Digital supply from 1.8 V to V_{DD}
J6, Pin 2 (J6-2)	DGND	Digital ground

Link Options

A number of link options are incorporated in the EVAL-MBnanoDAC-SDZ that must be set to the required operating conditions before using the evaluation board. Table 2 describes the positions of the links that control the evaluation board via the EVAL-SDP-CB1Z controller board using a PC and external power supplies. The positions listed in Table 2 to Table 4 match the evaluation board imprints (see Figure 11).

Table 2. Link Position Setup for the SDP-B Controller Board (Default)

Link Number	Position
REF1	2.5V
REF2	2.5V

DAUGHTER BOARD LINK OPTIONS

The EVAL-AD5323DBZ daughter board has two link options. The links control the setting of the output voltage control. The functions of these link options are described in detail in Table 3. Table 4 shows how these links are configured.

Table 3. Link Position for the EVAL-AD5323DBZ Daughter Board

EVALUATION BOARD SOFTWARE QUICK START PROCEDURES

INSTALLING THE EVAL-AD5323DBZ EVALUATION SOFTWARE

The EVAL-AD5323DBZ evaluation software is compatible with Windows® Vista (64-bit/32-bit) and Windows 7 (64-bit/32-bit).

Install the software before connecting the SDP-B controller board to the USB port of the PC to ensure the PC recognizes the SDP board when it connects to the PC.

To install the software, take the following steps:

1. Start the Windows operating system.
2. Download the installation software from the EVAL-AD5323DBZ evaluation board page.
3. Run the **setup.exe** file from the installer folder if it does not open automatically.
4. After the installation is complete, power up the evaluation board as described in the Power Supplies section.
5. Connect the EVAL-AD5323DBZ to the SDP-B controller board and the SDP-B controller board to the PC using the USB cable included in the evaluation kit.
6. When the software detects the EVAL-AD5323DBZ, proceed through any dialog boxes that appear to finalize the installation.

RUNNING THE SOFTWARE

To run the EVAL-AD5323DBZ evaluation software, proceed with the following steps:

1. Connect the EVAL-AD5323DBZ to the SDP-B controller board and connect the USB cable between the SDP-B controller board and the PC.
2. Power up the EVAL-AD5323DBZ as described in the Power Supplies section.
3. Click **Start** > **All Programs** > **Analog Devices** > **AD5323 Evaluation Software** to locate the evaluation board.

If the SDP-B controller board is not connected to the USB port when the software launches, a connectivity error displays (see Figure 2).

Connect the SDP-B controller board to the USB port of the PC and wait a few seconds. Once the SDP-B controller board and the EVAL-AD5323DBZ daughter board are detected, the display updates (see Figure 3).

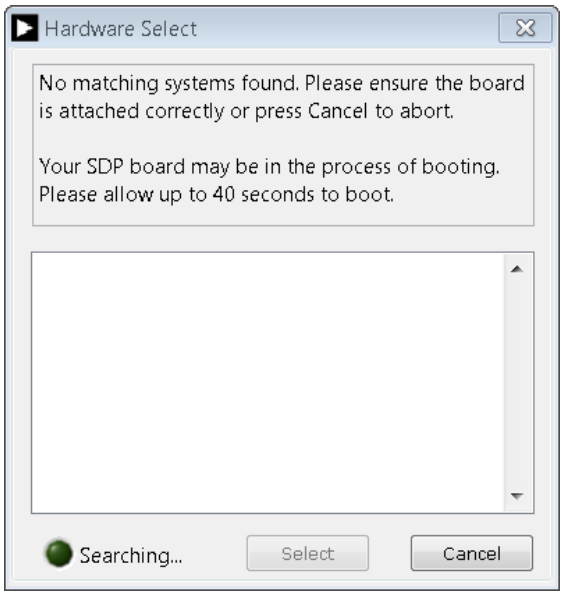

Figure 2. Connectivity Error

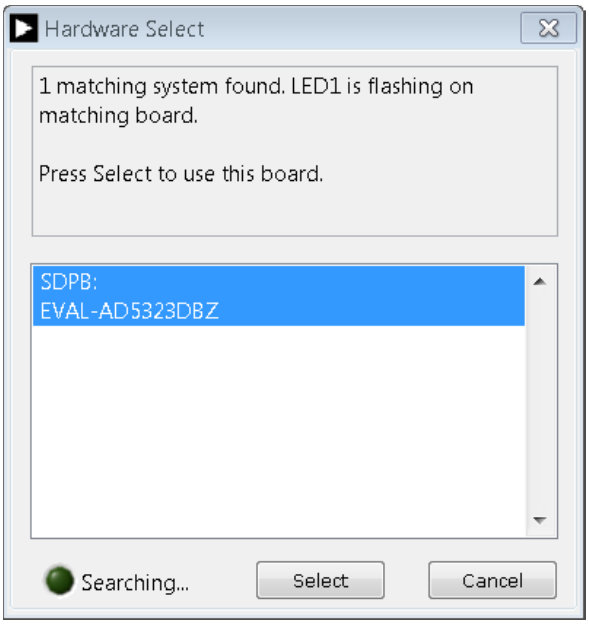

*Figure 3. **Hardware Select** Window*

Alternatively, the EVAL-AD5323DBZ evaluation software can be used without an evaluation board. The EVAL-AD5323DBZ evaluation software runs in simulation mode displaying expected outputs based on the input data. The main window of the EVAL-AD5323DBZ evaluation software then opens, as shown in Figure 4.

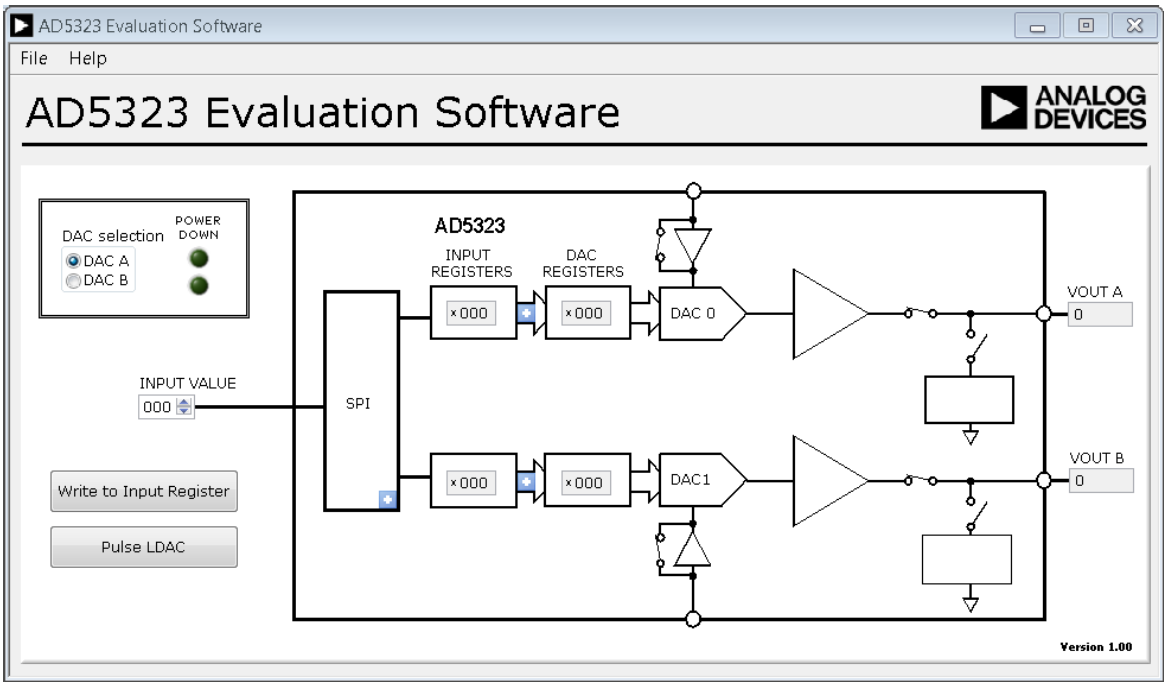

*Figure 4. **AD5323 Evaluation Software** Main Window*

SOFTWARE OPERATION

The EVAL-AD5323DBZ evaluation software allows the user to program values to the input and DAC registers of each DAC individually (see Figure 4).

Write to Input Register

Select the **Write to Input Register** button to load the code of the **INPUT VALUE** spin box to the input register of the DAC selected in the **DAC selection** block.

LDAC Control

Select the **Pulse LDAC** button to bring the $\overline{\text{LDAC}}$ pin low and then high, copying the data from the input registers to the DAC registers, and updating the outputs accordingly.

The $\overline{\text{LDAC}}$ pin can also be set high or low by clicking the blue progressive disclosure button on the **SPI** block, which opens the **DAC Config** window. Choose the **LDAC** setting by selecting logic high (**HIGH**) or logic low (**LOW**), shown in Figure 5.

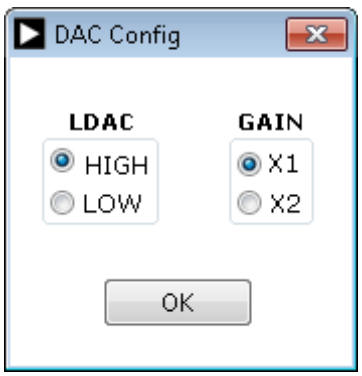

*Figure 5. **DAC Config** Window*

Power-Down Control

All of the DACs can be powered down simultaneously. Click the blue progressive disclosure buttons between the **INPUT REGISTERS** and **DAC REGISTERS** blocks to access the **Powerdown Configuration** window, as shown in Figure 6. When the power-down setting for the DAC is selected, click **OK** to write the appropriate values to the AD5323.
