

# AMIS-30660

## High Speed CAN Transceiver

### Description

The AMIS-30660 CAN transceiver is the interface between a controller area network (CAN) protocol controller and the physical bus and may be used in both 12 V and 24 V systems. The transceiver provides differential transmit capability to the bus and differential receive capability to the CAN controller.

Due to the wide common-mode voltage range of the receiver inputs, the AMIS-30660 is able to reach outstanding levels of electromagnetic susceptibility (EMS). Similarly, extremely low electromagnetic emission (EME) is achieved by the excellent matching of the output signals.

### Features

- Fully Compatible with the ISO 11898-2 Standard
- Certified “Authentication on CAN Transceiver Conformance (d1.1)”
- High Speed (up to 1 Mbit/s)
- Ideally Suited for 12 V and 24 V Industrial and Automotive Applications
- Low EME Common-Mode Choke is No Longer Required
- Differential Receiver with Wide Common-Mode Range ( $\pm 35$  V) for High EMS
- No Disturbance of the Bus Lines with an Unpowered Node
- Transmit Data (TxD) Dominant Time-out Function
- Thermal Protection
- Bus Pins Protected Against Transients in an Automotive Environment
- Silent Mode in which the Transmitter is Disabled
- Short Circuit Proof to Supply Voltage and Ground
- Logic Level Inputs Compatible with 3.3 V Devices
- These are Pb-Free Devices\*

ON Semiconductor®

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 9 of this data sheet.

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

Table 1. TECHNICAL CHARACTERISTICS

Symbol	Parameter	Conditions	Min	Max	Unit
$V_{CANH}$	DC Voltage at Pin CANH	$0 < V_{CC} < 5.25 \text{ V}$ ; No Time Limit	-45	+45	V
$V_{CANL}$	DC Voltage at Pin CANL	$0 < V_{CC} < 5.25 \text{ V}$ ; No Time Limit	-45	+45	V
$V_{o(dif)(bus\_dom)}$	Differential Bus Output Voltage in Dominant State	$42.5 \Omega < R_{LT} < 60 \Omega$	1.5	3	V
$t_{pd(rec-dom)}$	Propagation Delay TxD to RxD	See Figure 6	70	245	ns
$t_{pd(dom-rec)}$	Propagation Delay TxD to RxD	See Figure 6	100	245	ns
$C_{M-range}$	Input Common-Mode Range for Comparator	Guaranteed Differential Receiver Threshold and Leakage Current	-35	+35	V
$V_{CM-peak}$	Common-Mode Peak	See Figures 7 and 8 (Note 1)	-500	500	mV
$V_{CM-step}$	Common-Mode Step	See Figures 7 and 8 (Note 1)	-150	150	mV

1. The parameters  $V_{CM-peak}$  and  $V_{CM-step}$  guarantee low electromagnetic emission.

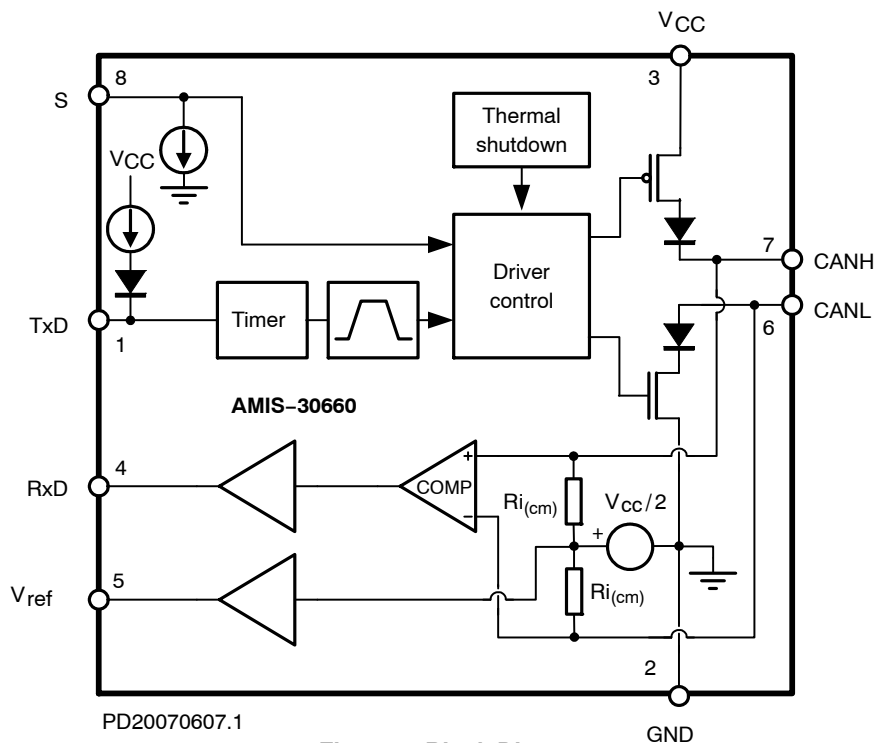

Figure 1. Block Diagram

Table 2. PIN LIST AND DESCRIPTIONS

Pin	Name	Description
1	TxD	Transmit data input; low input → dominant driver; internal pull-up current
2	GND	Ground
3	V <sub>CC</sub>	Supply voltage
4	RxD	Receive data output; dominant transmitter → low output
5	V <sub>REF</sub>	Reference voltage output
6	CANL	Low-level CAN bus line (low in dominant mode)
7	CANH	High-level CAN bus line (high in dominant mode)
8	S	Silent mode control input; internal pull-down current

**Table 3. ABSOLUTE MAXIMUM RATINGS**

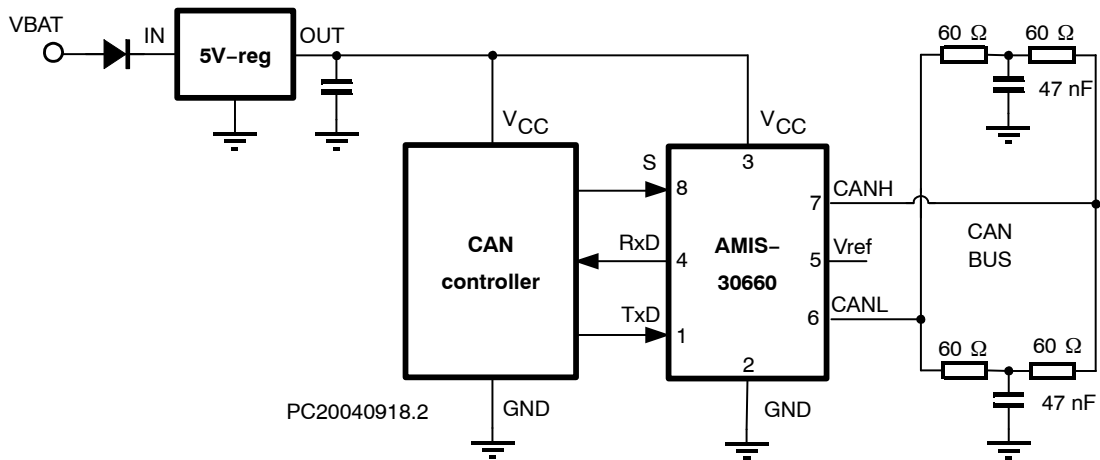

Symbol	Parameter	Conditions	Min	Max	Unit
V <sub>CC</sub>	Supply Voltage		-0.3	+7	V
V <sub>CANH</sub>	DC Voltage at Pin CANH	0 < V <sub>CC</sub> < 5.25 V; No Time Limit	-45	+45	V
V <sub>CANL</sub>	DC Voltage at Pin CANL	0 < V <sub>CC</sub> < 5.25 V; No Time Limit	-45	+45	V
V <sub>TxD</sub>	DC Voltage at Pin TxD		-0.3	V <sub>CC</sub> + 0.3	V
V <sub>RxD</sub>	DC Voltage at Pin RxD		-0.3	V <sub>CC</sub> + 0.3	V
V <sub>S</sub>	DC Voltage at Pin S		-0.3	V <sub>CC</sub> + 0.3	V
V <sub>ref</sub>	DC Voltage at Pin V <sub>REF</sub>		-0.3	V <sub>CC</sub> + 0.3	V
V <sub>tran(CANH)</sub>	Transient Voltage at Pin CANH	(Note 2)	-150	+150	V
V <sub>tran(CANL)</sub>	Transient Voltage at Pin CANL	(Note 2)	-150	+150	V
V <sub>esd</sub>	Electrostatic Discharge Voltage at All Pins	(Note 3) (Note 5)	-4 -500	+4 +500	kV V
Latchup	Static Latchup at All Pins	(Note 4)		100	mA
T <sub>stg</sub>	Storage Temperature		-55	+155	°C
T <sub>amb</sub>	Ambient Temperature		-40	+125	°C
T <sub>Junc</sub>	Maximum Junction Temperature		-40	+150	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

2. Applied transient waveforms in accordance with ISO 7637 part 3, test pulses 1, 2, 3a, and 3b (see Figure 4).
3. Standardized human body model ESD pulses in accordance to MIL883 method 3015.7.
4. Static latch-up immunity: static latch-up protection level when tested according to EIA/JESD78.
5. Standardized charged device model ESD pulses when tested according to EOS/ESD DS5.3-1993.

**Table 4. THERMAL CHARACTERISTICS**

Symbol	Parameter	Conditions	Value	Unit
R <sub>th(vj-a)</sub>	Thermal Resistance from Junction-to-Ambient in SOIC-8 Package	In Free Air	150	K/W
R <sub>th(vj-s)</sub>	Thermal resistance from Junction-to-Substrate of Bare Die	In Free Air	45	K/W

**Figure 2. Application Diagram**

FUNCTIONAL DESCRIPTION

**Operating Modes**

The behavior of AMIS-30660 under various conditions is illustrated in Table 5 below. In case the device is powered, one of two operating modes can be selected through Pin S.

**Table 5. FUNCTIONAL TABLE OF AMIS-30660** (X = DON'T CARE)

VCC	Pin TxD	Pin S	Pin CANH	Pin CANL	Bus State	Pin RxD
4.75 V to 5.25 V	0	0 (or Floating)	High	Low	Dominant	0
4.75 V to 5.25 V	X	1	$V_{CC} / 2$	$V_{CC} / 2$	Recessive	1
4.75 V to 5.25 V	1 (or Floating)	X	$V_{CC} / 2$	$V_{CC} / 2$	Recessive	1
$V_{CC} < \text{PORL}$ (Unpowered)	X	X	$0 \text{ V} < \text{CANH} < V_{CC}$	$0 \text{ V} < \text{CANL} < V_{CC}$	Recessive	1
$\text{PORL} < V_{CC} < 4.75 \text{ V}$	$> 2 \text{ V}$	X	$0 \text{ V} < \text{CANH} < V_{CC}$	$0 \text{ V} < \text{CANL} < V_{CC}$	Recessive	1

**High-Speed Mode**

If Pin S is pulled low (or left floating), the transceiver is in its high-speed mode and is able to communicate via the bus lines. The signals are transmitted and received to the CAN controller via the Pins TxD and RxD. The slopes on the bus line outputs are optimized to give extremely low electromagnetic emissions.

**Silent Mode**

In silent mode, the transmitter is disabled. All other IC functions continue to operate. The silent mode is selected by connecting Pin S to  $V_{CC}$  and can be used to prevent network communication from being blocked, due to a CAN controller which is out of control.

**Overtemperature Detection**

A thermal protection circuit protects the IC from damage by switching off the transmitter if the junction temperature exceeds a value of approximately 160°C. Because the transmitter dissipates most of the power, the power dissipation and temperature of the IC is reduced. All other IC functions continue to operate. The transmitter off-state resets when Pin TxD goes high. The thermal protection

circuit is particularly necessary when a bus line short-circuits.

**TxD Dominant Time-out Function**

A TxD dominant time-out timer circuit prevents the bus lines from being driven to a permanent dominant state (blocking all network communication) if Pin TxD is forced permanently low by a hardware and/or software application failure. The timer is triggered by a negative edge on pin TxD. If the duration of the low-level on Pin TxD exceeds the internal timer value  $t_{\text{dom}}$ , the transmitter is disabled, driving the bus into a recessive state. The timer is reset by a positive edge on Pin TxD.

**Fail-Safe Features**

A current-limiting circuit protects the transmitter output stage from damage caused by an accidental short-circuit to either positive or negative supply voltage, although power dissipation increases during this fault condition.

The Pins CANH and CANL are protected from automotive electrical transients (according to “ISO 7637”; see Figure 3). Pin TxD is pulled high internally should the input become disconnected.

ELECTRICAL CHARACTERISTICS

Definitions

All voltages are referenced to GND (Pin 2). Positive currents flow into the IC. Sinking current means the current

is flowing into the pin; sourcing current means the current is flowing out of the pin.

Table 6. DC AND TIMING CHARACTERISTICS

(V<sub>CC</sub> = 4.75 V to 5.25 V; T<sub>junc</sub> = -40°C to +150°C; R<sub>LT</sub> = 60 Ω unless specified otherwise.)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,  
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
