SPECIFICATIONS

Maximum ratings (for all devices)

Supply voltage V_s	4.9 to 5.1 V (DC...C4)
	7 to 30 V (DC...R4, DC...R5)
Lead temperature (soldering 5 sec.)	315 °C
Maximum load current	
Source	2 mA
Sink	20 μ A

Environmental specifications (for all devices)

Temperature range	
Compensated	0 to 50°C
Operating	-25 to +85°C
Storage	-40 to +125°C
Humidity limits (non-condensing)	0 to 95 %RH

CAUTION Applications requiring supply voltages greater than 20 V on power-up must have a 10 Ohm resistor installed between pin 1 of the sensor and the positiv (+) lead of the power supply.

If the sensor is subjected to a supply voltage of >20 V without ramp up, a current spike may occur causing the operational amplifier and/or the ASIC to fail.

Do not operate above 30 V max. Due to internal component ratings, the maximum safe operating voltage specification is 30 V.

¹ Proof pressure is the maximum pressure which may be applied without causing durable shifts of the electrical parameters of the sensing element.

² Burst pressure is the maximum pressure which may be applied without causing damage to the sensing element or leaks from the housing.
