

## System Cables for Mitsubishi Melsec Q FLK 50/EZ-DR/D37SUB/... CABLE-D37-M2,5/4x14/...

---

### 1. Short Description

These system cables are specifically designed for Mitsubishi I/O cards with a 37-pos. D-SUB male connector. Connecting cables are available to provide easy and industrially hardened wiring for all 32 signals including the power supply using a module.

A second version is also available in the form of splitting cables, which have a 37-pos. D-SUB female connector at one end and four 14-pos. flat-ribbon cable strips at the other end (transmitting 4 x 8 channels including the power supply connections).

Any 8-channel system cabling components can be coupled to these 14-pos. flat-ribbon cable strips, i.e., 1:1 transmission modules, relay or optocoupler modules, and PLC V8 adapters can be used depending on the application.

## 2. Technical Data
