# Corporate Profile

Micrel Inc., is a leading global manufacturer of IC solutions for the worldwide High-Performance Linear and Power, LAN, and Timing and Communication markets. The Company's products include advanced mixed-signal, analog and power semiconductors, high-performance communication, clock management, Ethernet switch and physical layer transceiver ICs. Company customers include leading manufacturers of enterprise, consumer, industrial, mobile, telecommunications, automotive, and computer products. Corporation headquarters and state-of-the-art wafer fabrication facilities are located in San Jose, CA, with regional sales and support offices and advanced technology design centers situated throughout the Americas, Europe, and Asia. In addition, the Company maintains an extensive network of distributors and reps worldwide. Web: <http://www.micrel.com>.

Founded in 1978, Micrel maintains a portfolio of world class wafer fabrication processes that enable the Company to produce new products faster than the competition. The Company uses, singularly or in combination, CMOS, Bipolar, and DMOS technologies in its High-Performance Linear and Power products. With the acquisition of Synergy Semiconductor in 1998, Micrel has high-speed bipolar capability in the form of ASSET™ (All Spacer Separated Element Transistor) process. This proprietary, patented bipolar technology employs a narrow deep-trench isolation technique that allows for electrical isolation between adjacent circuit elements. This means the Company can place multiple analog and digital functions on the same IC without the various functions causing the interference typically found when alternate techniques are used.

## LAN Solutions

Micrel is an established leader in wired LAN Solutions networking, with more than 500 million ports shipped. The Company's Ethernet products are widely used in digital home devices (IP-STB, IP-TV, etc.), routers, access points, VoIP, automotive, industrial, and Power over LAN Solutions (PoLS) applications, to name a few. There are a wide range of field-proven, multi-port products in a variety of packages, including physical layer transceivers (PHYs), embedded controllers, unmanaged and managed switches, and System-on-Chip (SoC) ICs with an integrated processor. Micrel's comprehensive portfolio of LAN Solutions products operate over commercial, industrial and extended temperature ranges, support AEC-Q100 Automotive qualification, and are available in a variety of environmentally friendly, lead-free packaging options.

## Timing and Communication Solutions

Micrel's Timing and Communication products include physical media device (PMD) ICs such as multi-rate (up to 4.25Gbps) laser drivers, post amplifiers, and optical module management controllers for all types of fiber-optic module applications. It also includes physical layer ICs such as 155Mbps and multi-rate (up to 2.7Gbps), clock and data recovery (CDR), and MUX/DeMUX ICs for access and telecommunications applications. This growing family of devices leads the industry in design innovation and flexibility. The ICs often exceed stringent industry requirements.

## Precision Edge® Products

Micrel's Precision Edge® product family includes precision frequency synthesizers, clock distribution and translation, multiplexers, crosspoint switches, and high-speed gates — all aimed at meeting the most rigorous, timing-critical applications. All Precision Edge products are designed to provide the lowest skew and jitter IC solutions available.

## Linear Power Filters (Ripple Blocker™)

This family of load switches and low drop-out regulators incorporate Micrel's Ripple Blocker™ active filter technology to provide high frequency ripple attenuation (switching noise rejection) for applications where switching noise cannot be tolerated by sensitive downstream circuits. These products are ideal for providing clean system power to increase overall system performance in applications such as medical imaging, webcams, digital still and video cameras, barcode scanners, smartphone cameras and RF stages, and global positioning systems (GPS).

## Low-Dropout Voltage Regulators

Micrel has gained a reputation as a leading supplier of LDO regulators and is a major global supplier to the mobile phone and computing industries. The Company maintains a very broad portfolio of LDO regulators ranging from 10mA devices in Teeny™ SC-70-5 packages to 7.5A power devices and LDO controllers for even higher current applications. Input voltages up to 120V are supported for industrial and automotive applications.

## Radio Frequency Products

Micrel's RF offering consists of two product groups: QwikRadio® receivers and transmitters for actuation devices such as remote controls and remote keyless entry, and RadioWire® transceivers for connectivity applications such as wire replacement in industrial control and security systems.

## Universal Serial Bus and PCMCIA

As a recognized leader of USB and PC card power-distribution solutions, Micrel's extensive selection of ICs is consistently used by many of the leading PC and peripheral OEMs.

## Hot Swap Controllers

Micrel's hot swap power controllers support the industry requirement for high availability (24/7/365) operation in servers, telecom and datacom equipment, and enterprise storage networks. These

products allow customers to upgrade or replace system boards without having to power down the entire system. Offering products for primary- and secondary-side applications, Micrel's family of hot swap power controllers offers customers a wide range of product choices uniquely suited to these applications.

## MOSFET Drivers

Micrel offers a broad range of MOSFET drivers, ranging from IttyBitty® devices in SOT-23 packaging to 12A high-power devices. New device families offer thermally enhanced exposed pad SOIC, MSOP and space-saving efficient MLF® 2mm x 2mm, 3mm x 3mm and 4mm x 4mm package options. Micrel has also introduced AEC-Q100 automotive qualified MOSFET drivers.

## Switch-Mode Power Supply Products

Micrel has a rapidly expanding portfolio of switching regulator products serving the mobile device, portable computer, telecommunications, and industrial markets. All products combine Micrel's advanced processes with the Company's strong design expertise to produce best-in-class products. These products address step-up, step-down, and multi-output systems (PMICs). The Company's DC-DC converter products are offered in controller (external switches) and regulator (switches on board) form, and are designed to provide high efficiency in a small form factor. One example is the SuperSwitcher II™ family of high-voltage, high current switching regulators. This family features input voltage ratings of up to 75V and output currents up to 12A. PMICs combine supervisory, DC-DC, LDO, and interface functions in a single IC to save space and cost, and Micrel offers many PMIC devices for key applications ranging from graphics processors to LTE dongles. Micrel also offers an expanding line of highly integrated DC-DC regulators with internal inductors.

## System/Thermal Management Products

Thermal management is an increasingly critical function in today's portable and high performance systems. Micrel's proprietary technology enables more functionality in smaller packages and superior, real-world accuracy in temperature measurement via embedded thermal diodes. Thermal diodes are increasingly used to monitor the die temperature of high-performance integrated circuits such as Intel® and AMD® microprocessors, Xilinx Virtex®, FPGAs, and ASICs. Micrel's family of products includes the world's first and only IttyBitty SOT-23 thermal diode supervisor IC and the smallest three-zone thermal supervisor. Altogether, Micrel offers a complete family of one-, two-, and three-zone thermal supervisor ICs as well as both analog and digital fan controllers.

## Operational Amplifiers and Comparators

The Company has a broad range of high- and low-voltage op-amps and comparators. These ICs range from general-purpose to high-speed devices. Of particular note is the MIC86x family of ICs which are, by far, the lowest power consumption op-amps of their type on the market. The advanced features of these products make them ideally suited for all forms of battery-powered equipment.

- Voltage references
- Voltage supervisors
- Miniature MOSFETs
- Serial and parallel-input latched drivers
- Display drivers
- Latched drivers
- Custom and semi-custom products

## Big Technology, Small Package Innovation

In response to increasing demands for smaller footprint solutions, Micrel leads the industry in packaging innovation with IC packaging options, including MLF technology, down to 0.85mm x 0.85mm and smaller CSP packages.

## Quality Assurance

Micrel first achieved ISO 9001 registration on March 31, 1997 and on December of 2004, the Company's wafer fabrication facility was certified to ISO14001:1996, the International Environmental Management System Standard. The goal of the environmental management system is to ensure regulatory compliance and to reduce environmental impact through waste reduction and recycling. Micrel is committed to delivering products and services that meet or exceed our customers' expectations — error free, on-schedule, and at a competitive price. Micrel maintains a culture of continuous improvement that runs through all disciplines in the company, and includes the activities of its suppliers.

## Commitment to Customer Satisfaction

Micrel remains committed to contributing to its customers' success. Internal processes have been developed with flexibility in mind, so the Company can quickly react to changing requirements. Micrel's outstanding sales, customer service, and technical support organizations are set up to address customer needs and requirements.

# High Performance Linear and Power Solutions Highlights

## MIC26603-ZA/MIC26903-ZA/MIC261203-ZA Constant-Frequency, Synchronous Buck Regulator Family

The Micrel MIC26603-ZA/MIC26903-ZA/MIC261203-ZA is a constant-frequency, synchronous buck regulator family of products featuring a unique adaptive ON-time control architecture. The MIC26603-ZA/MIC26903-ZA/MIC261203-ZA operates over an input supply range of 4.5V to 28V and provides a regulated output of up to 6A, 9A, and 12A of load current, respectively. The output voltage is adjustable down to 0.6V with a guaranteed accuracy of  $\pm 1\%$ , and the device operates at a switching frequency of 600kHz.

Micrel's Hyper Speed Control™ architecture allows for ultra-fast transient response while reducing the output capacitance and also makes (High  $V_{IN}$ )/(Low  $V_{OUT}$ ) operation possible. This adaptive  $t_{ON}$  ripple-control architecture combines the advantages of fixed-frequency operation and fast transient response in a single device.

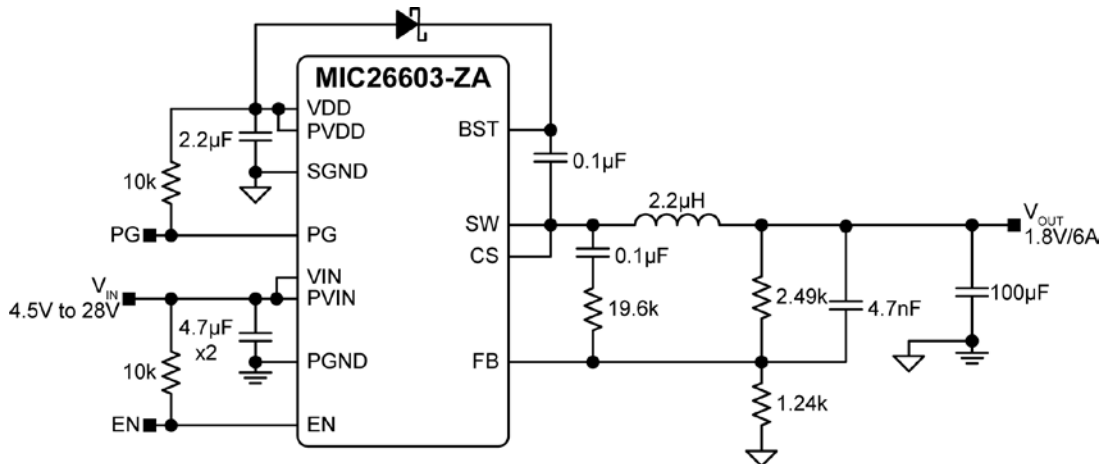

The MIC26603-ZA/MIC26903-ZA/MIC261203-ZA family of products offers a full suite of features to ensure protection of the IC during fault conditions. These include undervoltage lockout to ensure proper operation under power-sag conditions, internal soft-start to reduce inrush current, foldback current limit, "hiccup mode" short-circuit protection, and thermal shutdown. An open-drain Power Good (PG) pin is provided.

### Features

- Single input supply voltage
- Input voltage range: 4.5V to 28V
- 0.6V reference voltage
- High conversion ratio 28V to 0.6V
- Hyper Speed Control™ for faster dynamic response
- Peak efficiency of 95%
- Adjustable output voltage from 0.6V to 5.5V
- $\pm 1\%$  Feedback accuracy over 0°C to 85°C
- 600kHz switching frequency
- Hiccup mode short circuit protection
- Safe pre-bias start-up capability
- Supports all ceramic output capacitors

### Applications

- Servers, workstations
- Routers, switches
- Networking equipment
- Base stations

Efficiency ( $V_{IN} = 12V$ )  
vs. Output Current

# Voltage Regulator DC-to-DC Topologies

	Pros	Cons
<b>Linear Regulator</b> 	Only Steps Down ( $V_{OUT} < V_{IN}$ ) <ul style="list-style-type: none"> <li>- Inexpensive</li> <li>- Very Small</li> <li>- Low Noise/EMI</li> <li>- Ideal for:               <ul style="list-style-type: none"> <li>- 3.3V to 2.5V</li> <li>- 2.5V to 1.8V</li> <li>- 1.8V to 1.2V</li> </ul> </li> </ul>	Inefficient at high input-to-output voltage differential  $Eff = V_{OUT}/V_{IN}$  Note: If a linear regulator gets too hot, then use a buck switching regulator instead or the new HELDO® MIC38300.
<b>Buck Regulator</b> 	Only Steps Down ( $V_{OUT} < V_{IN}$ ) <ul style="list-style-type: none"> <li>- Lowest Peak Current</li> <li>- Only One Switch Voltage Drop</li> <li>- Low-Ripple Current In</li> <li>- Output-Filter Capacitor</li> <li>- Simple Inductor</li> <li>- Low Switch-Stress Voltage</li> </ul> $Eff \approx +85\%$	High-Side Switch  $I_{SW} (Avg) \approx I_{OUT}$ $DC \approx \frac{V_{OUT}}{V_{IN} \times Eff}$
<b>Synchronous Buck Regulator</b> 	(Internal Switch) <ul style="list-style-type: none"> <li>- Highest Efficiency (+90%)</li> <li>- Highest Efficiency Step Down</li> <li>- Same Pros as Buck</li> <li>- High Output Current (up to 20A)</li> </ul>	Two Switches  $I_{SW} (Avg) \approx I_{OUT}$ $DC \approx \frac{V_{OUT}}{V_{IN} \times Eff}$
<b>Boost</b> 	Only Steps Down ( $V_{OUT} < V_{IN}$ ) <ul style="list-style-type: none"> <li>- Low Peak Current</li> <li>- Low-Side Switch</li> <li>- Simple Inductor</li> <li>- Low Switch-Stress Voltage</li> </ul> $Eff \approx 85\%$	Output can't be completely turned off. No short-circuit protection.  $I_{SW} (Avg) \approx \frac{I_{OUT}}{1 - DC}$  $DC \approx \frac{V_{OUT} - (V_{IN} \times Eff)}{V_{OUT}}$
<b>Inverter/Buck-Boost</b> 	Negative Output Only <ul style="list-style-type: none"> <li>- Simple Inductor</li> </ul> $Eff \approx 85\%$	High-Side Switch High Peak Currents  $I_{SW} (Avg) \approx \frac{I_{OUT}}{1 - DC}$  $DC \approx \frac{V_{OUT}}{V_{OUT} + (V_{IN} \times Eff)}$

# Voltage Regulator DC-to-DC Topologies

	Pros	Cons
<b>Forward</b> 	Steps Up and Down - Isolated Outputs - Low-Side Switch Low Input/Output Ripple Eff $\approx$ 90%	$I_{SW} (Avg) \approx \frac{n_s}{n_p} \times I_{OUT}$ $DC \approx \frac{V_{OUT}}{(Eff \times V_{IN})} \times \frac{n_p}{n_s}$
<b>Flyback Applications</b> 	Steps Up and Down - Isolated Outputs - Multiple Outputs - Negative Output - High Output Voltage - Low-Side Switch Eff $\approx$ 80%	Transformer instead of inductor High Peak Current High Switch-Stress Voltage $I_{SW} (Avg) \approx \frac{I_{OUT}}{1 - DC}$ $DC \approx \frac{V_{OUT}}{V_{OUT} + N \times V_{IN} \times Eff}$
<b>SEPIC</b> 	Steps Up and Down - Low-Side Switch Eff $\approx$ 80%	High Peak Currents 2 inductors or coupled inductor High Switch-Stress Voltage $I_{SW} (Avg) \approx \frac{V_{OUT} \times I_{OUT} + I_{OUT}}{V_{OUT} \times Eff}$ $DC \approx \frac{V_{OUT}}{V_{OUT} + (V_{IN} \times Eff)}$
<b>Push-Pull</b> 	Steps Up and Down - Isolated Outputs - Low-Side Switches - Low Input/Output Ripple Eff $\approx$ 94%	$I_{SW} (Avg) \approx \frac{n_s}{n_p} \times I_{OUT}$ $DC \approx \frac{V_{OUT}}{2(Eff \times V_{IN})} \times \frac{n_p}{n_s}$
<b>Half-Bridge</b> 	Steps Up and Down - Isolated Outputs - Low FET Stress - Low Transformer Leakage Eff $\approx$ 95%	$I_{SW} (Avg) \approx \frac{n_s}{n_p} \times I_{OUT}$ $DC \approx \frac{V_{OUT}}{2(Eff \times V_{IN})} \times \frac{n_p}{n_s}$
<b>Full-Bridge</b> 	Steps Up and Down - Isolated Outputs - High Power - Low FET Stress Eff $\approx$ 95%	$I_{SW} (Avg) \approx \frac{n_s}{n_p} \times I_{OUT}$ $DC \approx \frac{V_{OUT}}{2(Eff \times V_{IN})} \times \frac{n_p}{n_s}$

			Min (V)	Max (V)		LDO	LDO				
MIC2225	600	300	2.7	5.5	Down to 1.0V	Down to 0.8V				Digital Power Management IC, 2MHz DC-DC converter with LDO and independent enable, >95% efficiency.	2x2*
MIC23060	600	300	2.7	5.5	1.8/3.3V	1.2V		X		4MHz 600mA DC-DC Regulator and 300mA LDO Regulator with flexible sequencing feature. DC-DC features HyperLight Load®. >95% efficiency.	2.5x2.5*
MIC2800	600	300/300	2.7	5.5	1.8/3.3V	LDO1: 0.8V to (VDC/DC-VDD), LDO2: 0.8V to 3.6V			X	Digital Power Management IC, 2MHz DC-DC converter with two Linear Regulators. LDO1 is directly connected to the output of the DC-DC converter. POR/Power Good pin and LOWQ mode.	3x3
MIC2807	600	200/30	2.7	5.5	DAC cntrl, 0.3V to Vin	2.85/2.85V				RF Power Management IC, 600mA DC-DC converter with DAC controlled output to power amplifier. 200mA RF LDO output current (provides bias voltage supply for PA), 30mA PA LDO (provides highly accurate PA reference voltage).	2.5x2.8
MIC2808	600	200/30	2.7	5.5	DAC cntrl, 0.3V to Vin	2.85/2.85V				RF Power Management IC, 600mA DC-DC converter with DAC controlled output to power amplifier. 200mA RF LDO output. Reduced package size and LDO dropout compared to MIC2807.	2x2.5*
MIC2810	600	300/300	2.7	5.5	1.0/2.0V	0.8V to 3.6V			X	Digital Power Management IC, 2MHz with two linear regulators. LDO1 has a separate VIN pin and can either post-regulate the DC-DC converter or be connected directly to the main input supply. POR/Power Good pin.	3x3
MIC2811	600	300/300	2.7	5.5	1.0/2.0V	LDO1,2: 0.8V to 3.6V, LDO3: 1.0V to 3.9V				Digital Power Management IC, 2MHz DC-DC converter with 3 LDOs. Bypass cap for improved noise performance on LDO1 and LDO2. LDO1 and LDO2 have separate VIN pins. Separate enable pins.	3x3
MIC2821	600	300/300/ 300	2.7	5.5	1.0/2.0V	LDO1,2: 0.8V to 3.6V, LDO3: 1.0V to 3.9V				Digital Power Management IC, 2MHz DC-DC converter with 3 LDOs. LDO1 and 2 have separate VIN pins. Independent enable for all four regulators.	3x3
MIC2826	500	150/150/ 150	2.7	5.5	I2C and Dynamic Scaling from 0.8V to 1.8V	I2C and Dynamic Scaling from 0.8V to 3.3V		X		4MHz DC-DC HyperLight Load converter with 1.8V to DVIN Adj via I2C and dynamic voltage scaling. 3 LDOs. Fast-mode (400kHz) I2C Control for start-up, enables and output voltages. Optional default start-up sequence and voltages. Fault monitoring mlag (IRQb).	2.5x2.5*
MIC2827	500	150/150	2.7	5.5	I2C and Dynamic Scaling from 0.8V to 1.8V	I2C and Dynamic Scaling from 0.8V to 3.3V		X		4MHz DC-DC HyperLight Load converter with dynamic voltage scaling and 2 LDOs. Fast-mode (400kHz) I2C control for start-up, enables, and output voltages. Optional default start-up sequence and voltages. Fault monitoring flag (IRQb).	2.5x2.5
MIC2829	1000/300/ 600/600/ 800/800	11x200	2.7	5.5	DC-DCs: 0.8V to 1.8V	0.8V to 3.3V				Highly integrated PMIC for 3G/4G wireless data and portable applications. 6 buck regulators, 5 general-purpose LDOs, 6 low noise regulators, SIM card level shifter, and PGOOD indicator with adjustable delay.	LGA-76, FBGA-85 (5.5x5.5mm)

\*\* Contact factory for additional voltage output options.

## 10Base-T/100Base-TX Physical Layer Transceivers

The KSZ8081 and KSZ8091 are single-supply 10Base-T/100Base-TX Ethernet physical-layer transceivers that transmit and receive data over standard CAT-5 unshielded twisted pair (UTP) cable.

The KSZ8081/91 is a highly-integrated PHY solution. It reduces board cost and simplifies board layout by using on-chip termination resistors for the differential pairs and by integrating a low-noise regulator to supply the 1.2V core.

The KSZ8081/91MNX and KSZ8081/91MLX offers the Media Independent Interface (MII) and the KSZ8081/91RNB offers the Reduced Media Independent Interface (RMII) for direct connection with MII/RMII-compliant Ethernet MAC processors and switches. The KSZ8081/91RNA offers the Reduced Media Independent Interface (RMII) for direct connection to RMII-compliant MACs in Ethernet processors and switches.

Energy Efficient Ethernet (EEE) included in the KSZ8091 parts provides further power saving during idle traffic periods and Wake-on-LAN (WOL) provides a mechanism for the KSZ8091 to wake up a system that is in standby power mode.

A 25MHz crystal is used to generate all required clocks, including the 50MHz RMII reference clock output for the KSZ8081/91RNB.

The KSZ8081/91 provides diagnostic features to facilitate system bring-up and debugging in production testing and in product deployment. Parametric NAND tree support enables fault detection between KSZ8081 I/Os and the board. Micrel LinkMD<sup>®</sup> TDR-based cable diagnostics identify faulty copper cabling.

The KSZ8081/91MNX and KSZ8081/91RNB are available in 32-pin, lead-free QFN packages. The KSZ8081/91MLX is available in 48-pin, lead-free LQFP packages. The KSZ8081/91RNA and KSZ8081/91RND are available in 24-pin, lead-free QFN packages.

## Applications

- Game consoles
- IP phones
- IP set-top boxes
- IP TV
- LOM
- Printers

## Ordering Information

P/N	Package	Interface
KSZ8081MLX	48-Pin LQFP	MII
KSZ8081MNX	32-Pin QFN	MII
KSZ8081RNA	24-Pin QFN	RMII
KSZ8081RNB	32-Pin QFN	RMII
KSZ8081RND	24-Pin QFN	RMII
KSZ8091MNX	32-Pin QFN	MII
KSZ8091RNB	32-Pin QFN	RMII

- Commercial and industrial temperature range
- LinkMD TDR-based cable diagnostics to identify faulty copper cabling

## VoIP IP Phone-on-a-Chip Family with Multiple Solutions for Mainstream Enterprise and Consumer Solutions

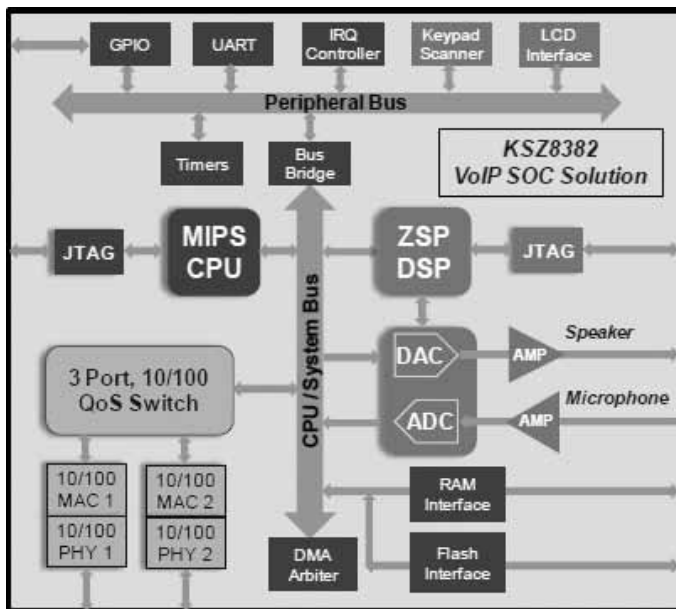

Micrel's new KSZ838x family provides a very high level of integration that results in an over 40% reduction in power consumption and over 30% reduction in BOM costs of legacy solutions.

The Micrel KSZ838x IP Phone-on-a-Chip SOC supplies a complete IP phone solution for enterprise and residential IP telephony, implementing a compact, green, and low-cost IP phone. The KSZ8382 is a highly integrated SoC designed to enable a new generation of functionality for green IP phones.

The KSZ8382 SoC is the ideal choice for enterprise and residential IP phones, backed by Micrel's high reliability and solution robustness, which has been proven in commercial, industrial, and automotive applications around the globe.

The KSZ8382 implements a multiprocessor architecture with embedded RISC CPU and powerful DSP, providing a flexible VoIP platform to offer excellent voice quality.

The chip's superior integration increases performance, and features a high-performance audio subsystem, LCD interface, keypad scanner, memory controllers for both SDRAM and DDR2, and flexible GPIO.

KSZ838x IP Phone SoC

Micrel integrates the industry's most robust, and lowest-power 10/100 Ethernet Switch, implementing critical features including IEEE 802.1p priority QoS, 802.1Q VLANs, and IGMP v1/v2 snooping for multicast packet filtering. The part implements innovative advanced power management including EEE (IEEE 802.3az) PHY technology.

### KSZ8382 Functionality

- MIPS32 RISC CPU for configuration and network processing
- External SDRAM, DDR2, and flash interfaces
- ZSP400 DSP for high-quality voice/audio processing
- 8kHz/16kHz 16-bit ADC/DAC with integrated amplifiers
- Embedded VoIP firmware (DSP)
  - Wideband CODECs: G.722, G.722.1, G.722.2
  - Narrowband CODECs: G.711  $\mu$ -law/A-law, G.723.1, G.726, G.729A/B
  - Voice quality optimizations and telephony features
- 3-port 10/100BaseT Ethernet Switch with integrated low-power PHY transceivers supporting IEEE 802.3az EEE
- Flexible GPIO support
- Keypad Scanner: 6x6 and 8x8 keypad configurations
- LCD interface

### Applications

- Industrial LAN solutions end-device attachments for both distributed and centralized topologies
- Daisy Chained 1588 networks

### KSZ8382L IP Phone SOC Evaluation Board

- Evaluation platform for Micrel VoIP KSZ8382L Single-Chip IP Phone SOC solution
- Enables OEM bring-up of complete SIP IP Phone solution, phone call functions, and user interface

**Micrel offers the entire SIP stack and driver free of cost to its customers.**

### Ordering Information

P/N	Memory Interface	Comments
KSZ8381Q	SDR	Narrowband
KSZ8382Q	SDR	Wideband
KSZ8382L	DDR2	Wideband

- Package: ROHS
  - KSZ8381Q: 128-Pin PQFP
  - KSZ8382L: 176-Pin LQFP
- Power: 3.3V, 1.2V, I/O: 3.3V (SDRAM support with 3.3V, 1.2V)
- Industrial temperature range:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Interfaces: GPIO, UART, JTAG, PCM

# Timing and Communications Product Highlights

## PCIe Clock Generators

Micrel has been introducing a complete line of new clock generation and clock distribution solutions for the growing Peripheral Component Interconnect Express (PCIe) market.

The complete line of PCIe clock generators offers the highest performance for single and multi-output solutions designed for Gen1, Gen2, and Gen3 applications. The increased bandwidth requirements of applications such as cloud computing and video streaming are driving PCIe to become a leading high data rate interconnect standard in telecommunications equipment, computing applications, and consumer applications.

PL6020xx and the PL6070xx provide extremely low noise timing for PCIe clock signals. The solutions support Gen1, Gen2, and Gen3 PCIe standards as well as SST for EMI reduction.

The devices operate from a 2.5V or 3.3V power supply and synthesize up to eight HCSL output clocks, supporting 25MHz, 100MHz, 125MHz, or 200MHz output from a single 25MHz crystal or LVC MOS reference clock.

SY75576L and SY75578L offer superior phase noise performance of less than 200fs additive jitter. These parts are ideal for PCIe reference clock distribution for a wide variety of high-end networking and storage applications.

## Features

- 25MHz fundamental crystal or reference input
- Generates up to 8 HCSL clock outputs at 25MHz, 100MHz, 125MHz, and 200MHz
- Typical phase jitter: 250fs
- Spread spectrum for EMI reduction
- Gen1, Gen2, Gen3 architecture compliant
- 2.5V or 3.3V operating range
- Industrial temperature range (–40°C to +85°C)
- GREEN, RoHS, and PFOS compliant
- Available in 6-pin SOT, and 16-pin, 24-pin, and 44-pin QFN packages

## Applications

- Servers
- Storage systems
- Switches and routers
- Gigabit Ethernet
- Set-top boxes/DVRs

## Ordering Information

### PCIe Clock Synthesizers

# Communications Product Highlights

## 12.5G High-Sensitivity Post Amplifiers for Next Generation XGPON, 10GEPON, and SFP+ Applications

The SY88053CL and SY88063CL limiting post amplifiers are designed for use in fiber-optic receivers for multi-rate applications from 1.0625Gbps up to 12.5Gbps. The devices incorporate high-bandwidth, high-sensitivity input stages with user programmable, wide range SD assert and LOS de-assert thresholds levels. They typically provide 4dB of electrical hysteresis to minimize LOS or SD chattering caused by noisy input signals to enable optimized system reach and performance.

Both devices incorporate fast SD assert and LOS de-assert times across the entire differential input voltage range of 5mV<sub>pp</sub> to 1800mV<sub>pp</sub> to enable improved link efficiency and optimization. Electrical hysteresis of 4dB is provided across a wide LOS/SD threshold range of 3mV<sub>pp</sub> to 30mV<sub>pp</sub>. Integrated 50Ω input and output impedances optimize high speed signal integrity while reducing external component counts. The TTL compatible JAM input enables a SQUELCH function by routing back the LOS or SD signal.

The SY88053CL enables user-adjustable decision threshold adjustment for optimized bit error rate (BER) operation in noisy applications with asymmetrical noise distribution. The SY88063CL provides a user-selectable digital offset correction (DOC) function that automatically compensates for internal device offsets in the high-speed data path.

### Ordering Information

Part Number	Package Type	Operating Range	Lead Finish
SY88053CLMG	3x3mm QFN-16	Industrial	NiPdAu Pb-Free
SY88053CLMG TR	3x3mm QFN-16	Industrial	NiPdAu Pb-Free
SY88063CLMG	3x3mm QFN-16	Industrial	NiPdAu Pb-Free
SY88063CLMG TR	3x3mm QFN-16	Industrial	NiPdAu Pb-Free

### Features

- High differential input sensitivity
- Wide SD de-assert/LOS assert threshold range
- Fast SD assert/LOS de-assert times
- Programmable decision threshold (SY88053CL)
- Digital offset correction (SY88063CL)
- 3.3V ±10% power supply range
- Industrial temperature range
- Tiny 3x3mm QFN package

### Applications

- Asymmetrical/Symmetrical XGPON
- Asymmetrical/Symmetrical 10GEPON
- 10G Ethernet
- 8G and 10G Fibre Channel
- SONET OC192 / SDH STM64
- WDM / DWDM Systems

### Markets

- PON/FTTx
- Datacom/Enterprise/Datacenters
- Storage area networks (SAN)
- High-performance computing (HPC)
- Telecom
- Wireless

## Micrel Analog High Performance Linear and Power Solutions Standard

### Notes:

- Typically, industrial grade power products rate the junction temperature up to +125°C. Varies from device to device. Refer to the datasheet.
- Applicable to TO-220, TO-247, TO-263, SOT-223, SPAK packages using 85% lead plus lead alloy die attach material. Refer to the datasheet.
- Package outline drawing convention reference for "MLF" has changed to DFN or QFN. Please refer to the datasheet.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

## JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
