

IL9151-3

PULSE DIALER

The IL9151-3 pulse dialer is a monolithic CMOS integrated circuit which converts pushbutton inputs to a series of pulses suitable for telephone dialing. It is intended to replace mechanical telephone dialers and can operate directly from telephone lines. CMOS technology is used to produce this device, resulting in very low power requirements and high noise immunity. The IL9151-3 can be easily interfaced with a variety of telephones, requiring only a minimal number of external components.

- Direct telephone line operation
- 4 x 3 matrix keyboard interface
- Supply voltage range of 2.0 to 5.5 volts
- Inexpensive RC oscillator
- Low power standby mode for redialing
- 22-digit redial memory
- Redial with either * or # key
- Dialer reset for line power breaks > 200 ms
- Selectable make/break ratio
- High speed test capacity

PIN DESCRIPTION

PIN No.	NAME	DESCRIPTION
1 2 3 4 14 15 16	R1~R4 C1~C3	Key inputs. These inputs can be interfaced to either an XY matrix keyboard or a 2 of 7 type keyboard. The keypad inputs are normally held at high. When a key is depressed, scanning signals are presented at C1, C2, and C3 inputs; the dialer identifies the key by examining the R1~R4 inputs. Debouncing is provided to avoid false entry.
5 12	V _{CC} GND	Positive power supply input. Negative power supply input.
6 7 8	CK1, CK, CK	Oscillator circuit input/output. The oscillator consists of two inverters, with oscillator frequency controlled by external RC components: R _{CK1} =270KΩ, R _{CK} =150KΩ, C _{CK} =150 pF  Oscillator Circuit
9	DP	Dialing pulse output. This output consists of an N-channel open drain device. Normally this output will be in off state during make and on during break. Dialing pulse rate = 10pps and inter-digital pause = 800 ms when F _{OSC} =18KHz in normal mode.
10	M/B	Make/Break ratio select input. In normal mode, this input is used to select the Make/Break ratio: when input = V _{CC} , M/B ratio = 1/2. when input = GND, M/B ratio = 2/3. when connected to the clock output (pin 7), this input can trigger the IN9151-3 into test mode, generating high speed dialing.
11	HK	Hook switch input. This input is used to detect whether the telephone is in the On-Hook or Off-Hook state: V _{CC} =on-hook GND=off-hook. (Resetting time = 200 ms minimum)
13	MUTE	Mute output. This output is an inverter normally at low state when there is no key entry. During outdialing it changes to high state and is used to mute the speech network.

MAXIMUM RATINGS*

Symbol	Parameter	Value	Unit
V_{CC}	DC Supply Voltage (Referenced to GND)	-0.3 to +5.5	V
V_{IN}	DC Input Voltage (Referenced to GND)	-0.3 to $V_{CC} + 0.3$	V
P_D	Power Dissipation in Still Air , Plastic DIP**	600	mW
Tstg	Storage Temperature	-55 to +150	°C
T_L	Lead Temperature, 1mm from case for 10 seconds	260	°C

* Maximum Ratings are those values beyond which damage to the device may occur. Functional operation should be restricted to the Recommended Operating Conditions.

** During: $-10^{\text{mW}}/^{\circ}\text{C}$ from 65°C to 70°C.

RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Max	Unit
V_{CC}	DC Supply Voltage (Referenced to GND)	2.0	5.5	V
V_{IN}	DC Input Voltage (Referenced to GND)	0	V_{CC}	V
T_A	Operating Temperature	-10	+70	°C

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{IN} and V_{OUT} should be constrained to the range $GND \leq (V_{IN} \text{ or } V_{OUT}) \leq V_{CC}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.

Operation Procedures

Symbol Definitions:

D_p: pulse digit (0 through 9)

ZiZiZi: conversation

0-0↑: off-hook.

0-0↓: on-hook.

* or # : Redial

Recommended Operations:

Normal Dialing:

0-0↑; D_p ... D_p; ZiZiZi; 0-0↓

Dial pulse begins as soon as first key is entered.

Debounced and detected on chip.

Redialing:

0-0↑; * or # key

(* or # key can be accepted as first key entry after Off-Hook.)

Functional Description

1) N-channel open drain output - DP (Figure 1).

2) Clock oscillator

The clock oscillator consists of two inverters, with the frequency of oscillation controlled by external components connected to pins 6,7, and 8. The circuit is sufficiently versatile to allow the use of a variety of external component configurations. The oscillator circuit is shown in figure 2.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели,
кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
