

Digital Sound Processors for FPD TVs

32bit Audio DSP with Built-in 4ch DAC and ASRC

BU9408KS2

No.12083EAT02

●General Description

This LSI is the digital sound processor which made the use digital signal processing for FPD TVs.

DSP of ROHM original is used for the TV sound processor unit, and it excels in cost performance. A selection input of two lines is possible from four digital inputs. An asynchronous sampling rate converter(ASRC) is built in one line. Three digital outputs are built in.

Two audio DA converters are built in.

●Features

■Digital Signal Processor unit

Word length: 32bit (Data RAM)
 The fastest machine cycle: 40.7ns (512fs, fs = 48kHz)
 Multiplier: 32 x 24 → 56bit
 Adder: 32 + 32 → 32bit
 Data RAM: 256 x 32bit
 Coefficient RAM: 128 x 24bit
 Sampling frequency: fs = 48kHz
 Master clock : 512fs (24.576MHz, fs=48kHz)

■Digital signal input (Stereo4lines):

16/20/24bit (I²S, Left-Justified, Right-Justified)

Digital signal output (Stereo 3 lines):

16/20/24bit (I²S, Left-Justified, Right-Justified, S/PDIF)

■.Asynchronous sampling rate converter

(one line at stereo) : 32kHz/44.1kHz/48kHz/88.2kHz/96kHz/176.4kHz/192kHz → 48kHz

■Audio DAC : One stereo output

24bit 8 x Over-sampling digital filter + 1 bit delta sigma DAC

S/N : 96dB

THD+N : 0.005% (Sine-wave 1kHz,0dB)

■Audio 16bit DAC : One stereo output

24bit 8 x Over-sampling digital filter + Audio 16bit DAC

S/N : 90dB

THD+N : 0.03% (Sine-wave 1kHz,0dB)

■The sound signal processing function for FPD TVs

Pre-Scaler, DC cut HPF, Channel Mixer, *P²Volume*(Perfect Pure Volume), BASS, MIDDLE, TREBLE, Simulated-Stereo, Surround, *P²Bass*, *P²Treble*, 7Band Parametric EQ, Master Volume, L/R balance, Post-Scaler, Output signal clipper
 (*P²Volume*, *P²Bass*, and *P²Treble* are the sound effect functions of ROHM original.)

●Applications

Flat Panel TVs (LCD, Plasma)

1. Command Interface

BU9408KS2 uses I²C-bus system for the command interface with a host CPU.

The register of BU9408KS2 has Write-mode and Read-mode.

BU9408KS2 specifies a slave address and 1 byte of selection address, and it performs writing and read-out.

The slave mode format of I²C bus is shown below.

S : Start condition

Slave Address : After the slave address (7 bits) set up by I2CADR, bit of a read-mode ("H") and a write-mode ("L") is attached, and a total of 8-bit data is sent. (MSB first)

A: Acknowledge An acknowledge bit is added on to each bit of data transmitted.

When data transmission is being done correctly, "L" is transmitted.

"H" transmission means there was no acknowledge.

Select Address: BU9408KS2 uses a 1-byte select address. (MSB first)

Data: Data byte, transmitted data (MSB first)

○When transmitting continuous data, the auto-increment function moves the select address up by one.

Repeat steps 7 and 8.

1-2. Data Read-out

During read-out, the corresponding read-out address is first written into the &hD0 address register (&h20h in the example). In the following stream, the data is read out after the slave address. Do not return an acknowledge after completing the reception.

○ Electrical Characteristics and Timing for Bus Line and I/O Stage

Fig.1-1: Timing Chart

Table 1-1: SDA and SCL Bus Line Characteristics (Ta=25°C and VDD=3.3V)

| Parameters | Symbol | High-Speed Mode | | Unit |
|---|---------|-----------------|------|------|
| | | Min. | Max. | |
| 1 SCL clock frequency | fSCL | 0 | 400 | kHz |
| 2 Bus free time between “stop” condition and “start” condition | tBUF | 1.3 | — | μS |
| 3 Hold time (re-transmit) “start” condition. After this period, the first clock pulse is generated. | tHD;STA | 0.6 | — | μS |
| 4 SCL clock LOW state hold time | tLOW | 1.3 | — | μS |
| 5 SCL clock HIGH state hold time | tHIGH | 0.6 | — | μS |
| 6 Re-transmit set-up time of “start” condition | tSU;STA | 0.6 | — | μS |
| 7 Data hold time | tHD;DAT | 0 ¹⁾ | — | μS |
| 8 Data setup time | tSU;DAT | 100 | — | ns |
| 9 SDA and SCL signal stand-up time | tR | 20+Cb | 300 | ns |
| 10 SDA and SCL signal stand-down time | tF | 20+Cb | 300 | ns |
| 11 Set-up time for “stop” condition | tSU;STO | 0.6 | — | μS |
| 12 Each bus line’s capacitive load | Cb | — | 400 | pF |

The values above correspond with $V_{IH\ min}$ and $V_{IL\ max}$ levels.

1) Because the transmission device exceeds the undefined domain of the SCL fall edge, it is necessary to internally provide a minimum 300ns hold time for the SDA signal (of $V_{IH\ min}$ of SCL signal).

The above-mentioned characteristic is a theory value in IC design and it doesn't be guaranteed by shipment inspection. When problem occurs by any chance, we talk in good faith and correspond. Neither terminal SCLI nor terminal SDAI correspond to 5V tolerant. Please use it within absolute maximum rating 4.5V.

2. Data and System-clock setting

The input-and-output distribution diagram of the audio data of BU9408KS2 is shown below.

BU9408KS2 has a 4-line digital stereo input, 3-line digital stereo output and 2-line analog stereo output. The digital data input to the DSP operation part is first changed to $f_s=48\text{kHz}$ data at the ASRC (asynchronous sampling rate converter). DSP operation part output is changed to either I²S format digital output, S/PDIF format digital serial output or analog output.

2-1. Input data selection to S-P Conversion 1 (SEL1)

| Select Address | Value | Operation Description |
|----------------|-------|-------------------------|
| &h03 [1:0] | 0 | Input data from I2S_IN1 |
| | 1 | Input data from I2S_IN2 |
| | 2 | Input data from I2S_IN3 |
| | 3 | Input data from I2S_IN4 |

2-2. Input data selection to S-P Conversion 2 (SEL1)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|-------------------------|
| &h03 [5:4] | 0 | Input data from I2S_IN1 |
| | 1 | Input data from I2S_IN2 |
| | 2 | Input data from I2S_IN3 |
| | 3 | Input data from I2S_IN4 |

2-3. Output data selection P-S Conversion 1 for DATAMO terminal (SEL2)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|--------------------------------------|
| &h04 [1:0] | 0 | Main data output after DSP operation |
| | 1 | Sub data output after DSP operation |
| | 2 | Data output before DSP operation |

2-4. Output data selection P-S Conversion 2 for DATASO terminal (SEL2, SEL5)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|--------------------------------------|
| &h04 [5:4] | 0 | Sub data output after DSP operation |
| | 1 | Main data output after DSP operation |
| | 2 | Data output before DSP operation |
| | 3 | Data output from DF1 |

2-5. P-S Conversion 2 output data option (DATASO, ERR1_LRC, ERR2_BCK)

Usually, from a DATASO terminal, the result of the Sub output process of DSP is outputted to the timing (LRCKO, BCKO) which synchronized with DATAMO.

Moreover, if this output option is set up, it will enable DATAMO to output the data of DF1 as independent data from a DATASO terminal as a 3 line serial output with ERR1_LRC (LRCK) and ERR2_BCK (BCK).

This function is used when doing a line out output using external DAC.

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|--|
| &h0E [7] | 0 | Synchronous output with DATAMO (LRCKO, BCKO) |
| | 1 | Asynchronous output with DATAMO (ERR1_LRC, ERR2_BCK) |

If this function is used, the monitor of the error flag from ERROR1 and ERROR2 terminal will not be made.

2-6. Output data selecting of SPDIFO terminal (SEL1, SEL7)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|---|
| &h05 [3:0] | 0 | Data output before DSP operation |
| | 1 | Main data output after DSP operation |
| | 2 | Sub data output after DSP operation |
| | 3 | Output data from I2S_IN1 (Only data of S/PDIF form) |
| | 4 | Output data from I2S_IN2 (Only data of S/PDIF form) |
| | 5 | Output data from I2S_IN3 (Only data of S/PDIF form) |
| | 6 | Output data from I2S_IN4 (Only data of S/PDIF form) |

2-7. Output data selecting DF1+ $\Delta\Sigma$ DAC (SEL3)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|---|
| &h06 [2:0] | 0 | Output data from S-P conversion 1 (Refer to &h03 [5:4]) |
| | 1 | Output data from S-P conversion 2 (Refer to &h03 [1:0]) |
| | 2 | Data output before DSP operation |
| | 3 | Main data output after DSP operation |
| | 4 | Sub data output after DSP operation |

2-8. Output data selecting DF2+16bitDAC (SEL4)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|---|
| &h06 [6:4] | 0 | Output data from S-P conversion 1 (Refer to &h03 [5:4]) |
| | 1 | Output data from S-P conversion 2 (Refer to &h03 [1:0]) |
| | 2 | Data output before DSP operation |
| | 3 | Main data output after DSP operation |
| | 4 | Sub data output after DSP operation |

2-9. Output clock selecting AMCLKO terminal (SEL8)

Default = 0

| Select Address | Value | Operation Description |
|----------------|-------|--|
| &h07 [3:0] | 0 | Output the 256fs (12.288MHz) clock of an input from the XI terminal. |
| | 1 | Output the 256fs clock made from PLL1 |
| | 2 | Output the 256fs clock made from PLL2 |
| | 3 | Output the 512fs (24.576MHz) clock of an input from the XI terminal. |
| | 4 | Output the 512fs clock made from PLL1 |
| | 5 | Output the 512fs clock made from PLL2 |
| | 6 | Output the 128fs (6.144MHz) clock of an input from the XI terminal. |
| | 7 | Output the 128fs clock made from PLL1 |
| | 8 | Output the 128fs clock made from PLL2 |

There are three system clocks used by ASRC of BU9408KS2, DSP, the P-S conversion 1, the P-S conversion 2, a SPDIF output part, DF1+sigma-delta DAC, and DF2+16bit DAC.

One is a 24.576MHz (512fs) system clock from XI terminal, and other two are a clock of 512fs made from PLL1 or PLL2.

| | 2 | The clock of 512fs made from PLL2 of the S-P conversion 2 |

When using DATASO as an asynchronous output to DATAMO, it sets up system clock selecting of the P-S conversion 2 by this command. (Dotted line ⑤)

3. S-P Conversion 1 and S-P Conversion 2

BU9408KS2 has two built-in serial-parallel conversion circuits. (S-P Conversion 1 and S-P Conversion 2)

S-P conversions 1 and 2 are blocks which receive 3-line serial input audio data from pins and convert it to parallel data.

Input from DATA1, BCKI1 and LRCKI1 (pins 43, 42 and 41), DATAI2, BCKI2 and LRCKI2 (pins 46, 45, and 44), DATAI3, BCKI3 and LRCKI3 (pins 49, 48 and 47), and DATAI4, BCKI4 and LRCKI4 (pins 52, 51 and 50) are selected.

The three input formats are IIS, left-justified and right-justified. The bit clock frequency may be selected from either 64fs or 48fs, but when 48fs is selected, the input format is always right-justified. 16bit, 20bit and 24bit output may be selected for each format.

Below are the timing charts for each transfer format.

4. Digital Sound Processing (DSP)

BU9408KS2's Digital Sound Processing (DSP) consists of special hardware most suitable to Thin TV.

BU9408KS2 uses this special DSP to perform the following processing.

Prescaler, DC cut HPF, Channel Mixer, P²Volume (Perfect Pure Volume), BASS, MIDDLE, TREBLE, Pseudo Stereo, Surround, P²Bass, P²Treble, 7 Band Parametric Equalizer, Master Volume, L/R Balance, PostScaler, Output Clipper, Sub-woofer output Processing.

DSP Outline and Signal Flow

- Data width: 32 bit (DATA RAM)
- Machine cycle: 40.7ns (512fs, fs=48kHz)
- Multiplier: 32x24 → 56 bit
- Adder: 32+32 → 32 bit
- Data RAM: 256x32 bit
- Coefficient RAM: 128x24 bit
- Sampling frequency: fs=48kHz
- Master clock: 512fs (24.576MHz, fs=48kHz)

Digital signal from 16bit to 24bit is inputted to DSP,

and it is extended by +8bit (+42dB) as overflow margin on the upper side.

The clip process is performed in DSP when the process exceeding this range is performed.

4-1. Prescaler

When digital signal is inputted to audio DSP, if the level is full scale input and the process of surround or equalizer is performed, then it overflows, therefore the input gain is adjusted by prescaler.

Adjustable range is +24dB to -103dB and can be set by the step of 0.5dB.

Prescaler does not incorporate the smooth transition function.

4-2. DC cut HPF

The DC offset component of digital signal inputted to the audio DSP is cut by this HPF.

The cut off frequency (fc) of HPF is 1Hz, and first-order filter is used.

Default = 0

| Select Address | Value | Operational explanation |

4-3. Channel mixer

It performs the setting of mixing the sounds of left channel & right channel of digital signal inputted to the audio DSP.

Here the stereo signal is made to be monaural.

The data inputted to Lch of DSP is mixed.

Default = 0

| Select Address | Value | Operational explanation |

4-4. P²Volume (Perfect Pure Volume)

There are some scenes in which sound suddenly becomes large like plosive sound in TV Commercial or Movie.

P²Volume function automatically controls the volume and adjusts the output level.

In addition, it also adjusts in such a way that a whispery sound can be heard easily.

P²Volume function operates in the fields of (1), (2) & (3) divided according to input level.

(1) at the time of $V_{I\ inf(-\infty)} \sim V_{I\ min}$

Noise is prevented from being lifted by P²Volume function.

(2) When input level is over $V_{I\ min}$ and output is below $V_{O\ max}$

$$V_O = V_I + \alpha$$

α : Lifting the Whole output level by the offset value α

(3) When output level V_O exceeds $V_{O\ max}$

$$V_O = K \cdot V_I + \alpha$$

K : Slope for suppressing of D range (P2V_K)

It is also possible to set an output level constant.

Selection of using the P²Volume function.

Default = 0

| &h33 [7] | 0 | Not using the P ² Volume function |
| | 1 | Using the P ² Volume function |

Setting of $V_{I\ min}$

In order to cancel that noise etc. is lifted by P²Volume, the P2V_MIN sets the minimum level at which (to the minimum) the P²Volume functions.

Setting of $V_{O\ max}$

P2V_MAX sets the output suppression level. It represents the output level $V_{O\ max}$ at the time of input level $V_I = 0dB$ in the case of setting of P2V_K = "0h" (slope is 0).

oPulse sound detection and High-speed recovery function (functioning only at the time of transition of (2)<->(3))

P²Volume function makes the P²Volume also compatible with large pulse sounds (clapping of hands, fireworks & shooting etc.) in addition to normal P²Volume operation. When large pulse sound is inputted, attack operation (A_RATE) or recovery operation (R_RATE) is performed at 4 or 8 times the speed of normal attack operation or recovery operation.

Selection of using the pulse sound detection function.

Default = 0

| Select Address | Value | Operational explanation |
|----------------|-------|---|
| &h3BC [7] | 0 | Not using of pulse sound detection function |
| | 1 | Using of pulse sound detection function |

Selection of operating times of Recovery Time (R_RATE) in the case of using the pulse sound detection function

Default = 0

| Select Address | Value | Operational explanation |
|----------------|-------|--|
| &h3C [3] | 0 | Operating at 4 times the speed corresponding to the setting time of R_RATE |
| | 1 | Operating at 8 times the speed corresponding to the setting time of R_RATE |

Selection of pulse sound detection time

Default = 0

| Select Address | Operational explanation | | | |
|----------------|-------------------------|----------------|---------|----------------|
| &h3C [6:4] | Command | Detection time | Command | Detection time |
| | 0 | 100us | 4 | 2ms |
| | 1 | 200us | 5 | 5ms |
| | 2 | 400us | 6 | 10ms |
| | 3 | 1ms | 7 | 20ms |

Setting of operating level of pulse sound detection function

Operation is started by the difference between the presently detected value and the last value as a standard.

Default = 0

| Select Address | Operational explanation | | | |
|----------------|-------------------------|-----------------|---------|-----------------|
| &h3C [2:0] | Command | Detection level | Command | Detection level |
| | 0 | Over 1.002 | 4 | Over 0.251 |
| | 1 | Over 0.709 | 5 | Over 0.178 |
| | 2 | Over 0.502 | 6 | Over 0.126 |
| | 3 | Over 0.355 | 7 | Over 0.089 |

Example) Present detection level A : -10dB → 10[^](-10/20) = 0.32

The last detection level B : -30dB → 10[^](-30/20) = 0.032

A – B : 0.32 – 0.032 = 0.288 → Operating by the setting of command "4" to "7".

4-5. BASS

BASS of TONE Control can use Peaking filter or Low-shelf filter.

The setting is converted, in the IC, into digital filter's coefficients (b0, b1, b2, a1, a2) by selecting the F_0 , Q and Gain, and transmitted to coefficient RAM. The switching shock noise at the time of alteration of setting can be prevented by the smooth transition function.

If combined with the Surround's setting of ON (&h70[7] = 1), it will become even wider.

4-10. Surround (Matrix Surround 3D)

It realizes the Surround with little feeling of fatigue even after wide seat spot and long-time watching & listening to. It reproduces the feeling of broadening of the natural sounds in medium & high bands and realizes the sound field that do no damage to the feeling of locating of the vocal.

If loop is used, then the number of stages of phase shifter can be increased in a pseudo way.

4-11. P²Bass (Perfect Pure Bass: Deep Bass Equalizer)

It is the deep bass equalizer making it possible that even thin-screen TV, by which the enclosure of speaker is restricted, can reproduce the real sound close to powerful deep bass & original sound.

Solid & clear deep bass with little feeling of distortion is realized. Even boosting of bass does not interfere with vocal band, therefore rich and natural deep band is realized.

4-15. Main output EVR (Electronic volume)

Volume is from +24dB to -103dB, and can be selected by the step of 0.5dB.

At the time of switching of Volume, smooth transition is performed.

The expression in the transition time from x[dB] to y[dB] is $|(10^{(x/20)} - 10^{(y/20)})| * 21.4\text{ms}$ (Main output balance Lch=Rch=0dB). The transition time is 21.4ms when it is from 0dB to $-\infty$. Recommend that this setting value is 0dB and under.

4-27. Direct setting five coefficient of b0, b1, b2, a1 and a2 of Bi-quad Filter

7 bands Parametric Equalizer of main output and of 3 bands Parametric Equalizer of sub output have used the secondary IIR type digital filter (Bi-quad Filter).

It is possible to set five coefficient 24 bit of b0, b1, b2, a1 and a2 of Bi-quad Filter (-4~+4) directly from an external.

When this function is used, it can do the filter type and frequency setting, Q value (quality factor) setting and gain setting other than Peaking, Low-Shelf and High-Shelf unrestrictedly.

(Note) five coefficient have the necessity to make below the ±4, there is no read-out function of setting value and an automatic renewal function of coefficient RAM.

Register for the coefficient transfer of 24bit

Before transferring into coefficient RAM in a lumping, the data is housed in the register for coefficient transfer from the micro-computer.

Default = 00h

| Select Address | Operating explanation |
|----------------|---|
| &h8D [7:0] | bit[23:16] which transfers 24 bit coefficient |
| &h8E [7:0] | bit[15:8] which transfers 24 bit coefficient |
| &h8F [7:0] | bit[7:0] which transfers 24 bit coefficient |

It starts to transmit the coefficient of 24bit into coefficient RAM

Default = 0

Appointment of coefficient number other than 14H↔45H is prohibition

4-28. About the automatic renewal of five coefficients of b0, b1, b2, a1 and a2 of Bi-quad Filter

BASS, MIDDLE, TREBLE, main output 7 bands Parametric Equalizer and sub output 3 band Parametric Equalizer have used coefficient RAM. As for this coefficient RAM, because direct access is not possible from the micro-computer, it cannot refresh the register efficiently.

There is an automatic renewal function of coefficient RAM in this DSP, the automatic write-in renewal of coefficient RAM is possible by using this function. However when 4-26 「the function of direct setting a coefficient RAM」 is utilized, it is not possible to utilize automatic write-in renewal.

5. P-S Conversion 1 and P-S Conversion 2

BU9408KS2 has two built-in parallel-serial conversion circuits (P-S Conversion 1 and P-S Conversion 2). P-S conversion 1 converts the output from the ASRC or DSP (Main/Sub) output to 3-line serial data before sending it from DATAMO, BCKO and LRCKO (pins 27, 28 and 29). (Refer to &h04 [1:0])

P-S conversion 2 converts the ASRC or DSP (Main/Sub) output or DF1 output into 3-line serial data before transmitting it from DATASO, BCKO and LRCKO (pins 26, 28 and 29). Moreover, it is also possible to output the synchronous clock for serial transfer from ERR1_LRC and an ERR2_BCK terminal by an output option (Refer to &h04 [5:4]).

The three output formats are IIS, left-justified and right-justified. 16bit, 20bit and 24bit output can be selected for each format.

The timing charts for each transfer format are as follows:

IIS Format

Left-Justified Format

Right-Justified Format

5-1. 3-line Serial Output Format Configuration

Default = 0

| Select Address | Value | Operation Description |
|-----------------------------|-------|------------------------|
| P-S Conversion 1 &h0D [3:2] | 0 | IIS format |
| P-S Conversion 2 &h0E [3:2] | 1 | Left-justified format |
| | 2 | Right-justified format |

5-2. 3-line Serial Output Data Bit Width Configuration

Default = 0

| Select Address | Value | Operation Description |
|-----------------------------|-------|-----------------------|
| P-S Conversion 1 &h0D [1:0] | 0 | 16 bit |
| P-S Conversion 2 &h0E [1:0] | 1 | 20 bit |
| | 2 | 24 bit |

6. 8x Over-Sampling Digital Filter (DF)

In each BU9408KS2 audio analog signal output DAC, an 8x over-sampling digital filter is inserted into the previous step of the DAC input.

In addition to filter calculations, this block also performs pre-scaler, volume and Lch/Rch mix functions.

BU9408KS2's DF+DAC configurations are as follows:

6-1. Pre-Scaler Function (Attenuation)

The signal levels are adjusted in order to bring out the audio DAC performance.

For DF1, refer to &h90[7:0] and &h91[7:0]. The default value is h4000.

For DF2, refer to &h93[7:0] and &h94[7:0]. The default value is h4000.

6-2. Volume Function

The volume value can be configured in 0.5dB increments from +6dB to -121dB.

To change the volume value, coefficient soft transition takes place.

The expression in the transition time from x[dB] to y[dB] is $|(10^{(x/20)} - 10^{(y/20)})| * 21.4ms$. The transition time is 21.4ms when it is from 0dB to $-\infty$. Recommend that this setting value is 0dB and under.

Default = FFh

| Select Address | Operation Description | |
|------------------|-----------------------|-----------|
| DF1 &h92 [7:0] | Command Value | Gain |
| DF2 &h95 [7:0] | 00 | +6dB |
| | 01 | +5.5dB |
| | ⋮ | ⋮ |
| | 0C | 0dB |
| | 0D | -0.5dB |
| | 0E | -1dB |
| | ⋮ | ⋮ |
| | FE | -121dB |
| | FF | $-\infty$ |

Calculation format: (12-command value) x 0.5dB

6-3. Channel Mixer

Performs mixing configuration of left and right channel sounds of digital signals input to the DAC.

Stereo signals are converted to monaural here.

Mixes DAC Lch input data.

Default = 0

| Select Address | Value | Operation Description |
|------------------|-------|-------------------------|
| DF1 &h23 [3:2] | 0 | Inputs Lch data |
| DF2 &h23 [7:6] | 1 | Inputs (Lch+Rch)/2 data |
| | 2 | Inputs (Lch+Rch)/2 data |
| | 3 | Inputs Rch data |

Mixes DAC Rch input data.

Default = 0

| Select Address | Value | Operation Description |
|------------------|-------|-------------------------|
| DF1 &h23 [1:0] | 0 | Inputs Rch data |
| DF2 &h23 [5:4] | 1 | Inputs (Lch+Rch)/2 data |
| | 2 | Inputs (Lch+Rch)/2 data |
| | 3 | Inputs Lch data |

7. Mute Function by MUTE1B, MUTE2B and MUTE3B Terminal

BU9408KS2 has a mute function by an external terminal.

It's possible to mute DSP's main and sub digital output by MUTE1B (12pin) terminal to "L".

It's possible to mute DF1+ $\Delta\Sigma$ DAC output by MUTE2B (13pin) terminal to "L".

It's possible to mute DF2+16bit DAC output by MUTE3B (14pin) terminal to "L".

Soft mute transition time setup of a MUTE1B terminal (12PIN)

Mute the Main and Sub output of DSP.

Select the transition time of entering from 0dB to mute state.

Default = 0

| Select Address | Value | Operating Description |
|----------------|-------|---------------------------------------|
| &h10 [1:0] | 0 | 21.4ms (Release mute time is 21.4ms.) |
| | 1 | 10.7ms (Release mute time is 10.7ms.) |
| | 2 | 5.4ms (Release mute time is 10.7ms.) |
| | 3 | 2.7ms (Release mute time is 10.7ms.) |

Soft mute transition time setup of a MUTE2B terminal (13PIN)

Mute the AOUTL2(22PIN) and AOUTR2(20PIN) output of DF1+ $\Delta\Sigma$ DAC.

Select the transition time of entering from 0dB to mute state.

Default = 0

| Select Address | Value | Operating Description |
|----------------|-------|---------------------------------------|
| &h10 [3:2] | 0 | 21.4ms (Release mute time is 21.4ms.) |
| | 1 | 10.7ms (Release mute time is 10.7ms.) |
| | 2 | 5.4ms (Release mute time is 10.7ms.) |
| | 3 | 2.7ms (Release mute time is 10.7ms.) |

Soft mute transition time setup of a MUTE3B terminal (14PIN)

Mute the AOUTL1(17PIN) and AOUTR1(16PIN) output of DF2+16bit DAC.

Select the transition time of entering from 0dB to mute state.

Default = 0

| Select Address | Value | Operating Description |
|----------------|-------|---------------------------------------|
| &h10 [5:4] | 0 | 21.4ms (Release mute time is 21.4ms.) |
| | 1 | 10.7ms (Release mute time is 10.7ms.) |
| | 2 | 5.4ms (Release mute time is 10.7ms.) |
| | 3 | 2.7ms (Release mute time is 10.7ms.) |

8. Commands Transmitted after Reset Release

The following commands must be transmitted after reset release, including after power supply stand-up.

0. Turn power on.

↓

○Wait approximately 1ms until oscillation is stable. (The time to stabilization should be adjusted according to the pendulum product.)

↓

1. Reset release (RESETB = "H"), Mute release (MUTE1B, MUTE2B, MUTE3B = "H")

↓

○Wait approximately 500us until RAM initialization is complete.

↓

2. &hF1[2] = 0 : Signals from the analog block are connected to the digital block.

↓

3. &hF3[1] = 0 : CLK100M for a down sample block of ASRC is set as a normal mode. (&hF3 = 00h)

↓

4. &hB0[5:4] = 0 : Configure PLL clock to regular use state. (&hB0 = 02)

↓

5. &hB1[7:0] = AAh : The phase of the clock outputted from PLL is adjusted.

↓

6. &h03[5:4][1:0] = 0 : Select input at SP1 and SP2.

↓

7. &h18[7] = 0 : Set 1 when use SPDIF. (Needless set when not use SPDIF.)

↓

8. &hA0 = A6h : Configure PLLA1.

&hA1 = A0h

&hA2 = A4h

&hA3 = A4h

&hA4 = 00h

&hA7 = 40h

↓

9. &hA8 = A6h : Configure PLLA2.

&hA9 = A0h

&hAA = A4h

&hAB = A4h

&hAC = 00h

&hAF = 40h

↓

○Wait approximately 20ms until PLL is stable.

↓

10. &h01[7:6] = 0 : The data clear of built-in RAM is completed and it changes into the condition that RAM can be used.

↓

11. &h08[4][0] = 0 : Configure system clock..

↓

12. &h14 = C0h : The data clear of ASRC is completed and it changes into normal condition.

&h14 = 40h

&h14 = 01h

↓

13. Configuration of other registers.

&h26[7:0] = **h : Mute release of Main data output volume (30h = 0dB)

&h2C[7:0] = **h : Mute release of Sub data output volume (30h = 0dB)

&h92[7:0] = **h : Mute release of DF1+ΔΣDAC output volume (0Ch = 0dB)

&h95[7:0] = **h : Mute release of DF2+16bitDAC output volume (0Ch = 0dB)

9. Audio Interface Signal Specification

oElectric specification and timing of MCK, BCK, LRCK, and SDATA1 and SDATA2

*1 This standard value has specified that the edge of LRCK and the rising edge of BCK do not overlap.

10. Notes at the Time of Reset

Since the state of IC is not decided, please make it into RESETB=L at the time of a power supply injection, and surely apply reset.

Reset of BU9408KS2 is performing noise removal by MCLK.

Therefore, in order to apply reset, a MCLK clock pulse is required of the state of RESETB=L more than 10 times.

The power-on reset after a power supply injection, and when you usually apply reset at the time of operation, please be sure to carry out in the state where the clock is inputted, from MCLK.

●Cautions**(1) ABSOLUTE MAXIMUM RATINGS**

Permanent device damage may occur and break mode (open or short) can not be specified if power supply, operating temperature, and those of ABSOLUTE MAXIMUM RATINGS are exceeded. If such a special condition is expected, components for safety such as fuse must be used.

(2) Regarding of SCLI and SDAI terminals

SCLI and the SDAI terminal do not support 5 V-tolerant. Please use it within absolute maximum rating (4.5V).

(3) Power Supply

Power and Ground line must be designed as low impedance in the PCB. Print patterns of digital power supply and analog power supply must be separated even if these have same voltage level. Print patterns for ground must be designed as same as power supply. These considerations avoid analog circuits from the digital circuit noise. All pair of power supply and ground must have their own de-coupling capacitor. Those capacitor should be checked about their specification, etc. (nominal electrolytic capacitor degrades its capacity at low temperature) and choose the constant of an electrolytic capacitor.

(4) Functionality in the strong electro-magnetic field

Malfunction may occur if in the strong electro-magnetic field.

(5) Input terminals

All LSI contain parasitic components. Some are junctions which normally reverse bias. When these junctions forward bias, currents flows on unwanted path, malfunction or device damage may occur. To prevent this, all input terminal voltage must be between ground and power supply, or in the range of guaranteed value in the Electrical characteristics. And no voltage should be supplied to all input terminal when power is not supplied.

Precaution on using ROHM Products

- Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment ^(Note 1), transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

| JAPAN | USA | EU | CHINA |
|-----------|-----------|------------|-----------|
| CLASS III | CLASS III | CLASS II b | CLASS III |
| CLASS IV | | CLASS III | |

- ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
 - Installation of protection circuits or other protective devices to improve system safety
 - Installation of redundant circuits to reduce the impact of single or multiple circuit failure
- Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc. prior to use, must be necessary:
 - Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
 - Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
 - Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
 - Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
 - Sealing or coating our Products with resin or other coating materials
 - Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
 - Use of the Products in places subject to dew condensation
- The Products are not subject to radiation-proof design.
- Please verify and confirm characteristics of the final or mounted products in using the Products.
- In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.
- De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.
- Confirm that operation temperature is within the specified range described in the product specification.
- ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

- When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.
- In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.
2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
 - [a] the Products are exposed to sea winds or corrosive gases, including Cl₂, H₂S, NH₃, SO₂, and NO₂
 - [b] the temperature or humidity exceeds those recommended by ROHM
 - [c] the Products are exposed to direct sunshine or condensation
 - [d] the Products are exposed to high Electrostatic
2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.
3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.
4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:
2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.
2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.
3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.
4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.
2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.
3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
