

Product Overview

The QPB9337 is a highly integrated front-end module targeted for TDD base stations. The switch LNA module integrates a two-stage LNA and a high power switch in a dual channel configuration. The second stage LNA has integrated bypass mode. Power down and bypass capability for the LNAs can be controlled with control pins on the module.

The QPB9337 can be utilized across the 2.3–3.8 GHz range to provide 1.3 dB noise figure for operation in the receive mode at 3.5 GHz and 0.8 dB insertion loss in the transmit mode. The LNAs utilize Qorvo’s high performance E-pHEMT process while the SOI technology based switch supports input RF power signals of 8W average power. The product only needs a +5V supply to operate the high power switch and the LNAs.

The QPB9337 is packaged in a RoHS-compliant, compact 6 mm x 6 mm surface-mount leadless package. The switch LNA module is targeted for wireless infrastructure applications configured for TDD-based MIMO architectures. The module can be used for next generation 5G or pre-5G solutions or small cell base-station applications.
