

Smart Power driver for motorbike blinker

Datasheet - production data

Description

The VN5MB02-E is a Smart Power driver for motorbike blinker; it is connected between the battery positive terminal (V_{CC} pin) and a mechanical switch to the right or left side. As soon as the series switch connects the OUT pin to the bulbs, the device begins to turn on/off with a 50% duty cycle.

External low voltage capacitors are needed for supplying the device (C_{EXT}), for stabilizing the internal voltage regulator output (C_{REG}) and for setting the oscillating frequency (C_{FREQ}).

When a low load is detected, output current lower than I_{df} , flashing frequency is automatically doubled.

The internal current shutdown latches the VN5MB02-E when a heavy overload occurs; thermal limitation reduces the stress on the device if the junction temperature raises (for instance when a soft over current event, not triggering the current latch protection, happens). If the overload condition lasts more than a time t_{fault} , the VN5MB02-E is latched.

Features

Type	$R_{DS(on)}$	I_{Isd} (Typ)	V_{CC}
VN5MB02-E	0.08 Ω	30 A	41 V

- Complete direction indicator in a SMD package
- Double frequency flashing in low load conditions
- High accuracy in setting operating frequency and low load detection
- Maximum current protection with latch
- Reverse battery protected
- Cycle by cycle thermal limitation
- Suitable for load configuration up to 2 x 10 W + 3.4 W
- Open-load detection for FAST lane change (patent pending)

2 Electrical specifications

2.1 Absolute maximum rating

Stressing the device above the rating listed in [Table 3](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_{CC}	DC supply voltage	37	V
V_{CCPK}	Transient supply voltage ($t < 400$ ms, $T_j = 25^\circ\text{C}$)	41	V
C_{EXT}	C_{EXT} voltage	-0.3 to 20	V
C_{REG}	C_{REG} voltage	-0.3 to 3.6	V
C_{FREQ}	C_{FREQ} voltage	-0.3 to 3.6	V
TM	Test mode voltage	-0.3 to 3.6	V
I_D	Maximum DC drain current	Internally limited	A
$-I_D$	Reverse DC output current	5	A
V_{ESD}	Electrostatic discharge (human body model: $R = 1.5$ K Ω ; $C = 100$ pF)		
	– OUTPUT	4000	V
	– V_{CC}	4000	V
	– C_{EXT}	2000	V
	– C_{FREQ}	2000	V
	– C_{REG}	2000	V
	– TM	2000	V
V_{esd}	Electrostatic discharge CDM	750	V
T_j	Junction operating temperature	Internally limited	$^\circ\text{C}$
T_{stg}	Storage temperature	-55 to 150	$^\circ\text{C}$

3 Functional description

3.1 Normal operation

When a nominal load is connected to the OUT pin, the device oscillates by charging the C_{EXT} capacitor up to the threshold voltage V_{ch} quickly, and then slowly discharging C_{EXT} to the threshold voltage V_{cl} by a constant current $I_{C_{EXT}}$.

The self oscillating frequency of the device is determined by the relation:

$$f_{OSC} = \frac{I_{freq}}{4 \times n \times C_{freq} \times (V_{ch} - V_{cl})}$$

n is the internal digital counter (equal to 1066).

3.2 Low load condition

If the load current is lower than I_{df} , the device will detect the low load at the end of the ON phase, and will double the oscillating frequency.

$$F(\text{fault}) = f_{OSC} \times K_{freq}$$

3.3 Current protection and thermal limitation

The internal current shutdown latches the VN5MB02-E when a heavy overload occurs and, if the overload even is removed, the device may be turned on at the following on time.

The thermal limitation reduces the stress on the device if the junction temperature rises (for instance when a soft over current event, not triggering the current latch protection, happens).

If the overload condition lasts more than a time t_{fault} , the VN5MB02-E is latched; when the overload condition is not anymore present, device can be turned on at the following on time.

Figure 12. ISO pulse test circuit

1. For pulse 5b an external protection is needed: see [Table 7](#).

5 Package and packing information

5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK® packages, depending on their level of environmental compliance. ECOPACK® specifications, grade definitions and product status are available at: www.st.com.

ECOPACK® is an ST trademark.

Компания «Океан Электроники» предлагает заключение долгосрочных отношений при поставках импортных электронных компонентов на взаимовыгодных условиях!

Наши преимущества:

- Поставка оригинальных импортных электронных компонентов напрямую с производств Америки, Европы и Азии, а так же с крупнейших складов мира;
- Широкая линейка поставок активных и пассивных импортных электронных компонентов (более 30 млн. наименований);
- Поставка сложных, дефицитных, либо снятых с производства позиций;
- Оперативные сроки поставки под заказ (от 5 рабочих дней);
- Экспресс доставка в любую точку России;
- Помощь Конструкторского Отдела и консультации квалифицированных инженеров;
- Техническая поддержка проекта, помощь в подборе аналогов, поставка прототипов;
- Поставка электронных компонентов под контролем ВП;
- Система менеджмента качества сертифицирована по Международному стандарту ISO 9001;
- При необходимости вся продукция военного и аэрокосмического назначения проходит испытания и сертификацию в лаборатории (по согласованию с заказчиком);
- Поставка специализированных компонентов военного и аэрокосмического уровня качества (Xilinx, Altera, Analog Devices, Intersil, Interpoint, Microsemi, Actel, Aeroflex, Peregrine, VPT, Syfer, Eurofarad, Texas Instruments, MS Kennedy, Miteq, Cobham, E2V, MA-COM, Hittite, Mini-Circuits, General Dynamics и др.);

Компания «Океан Электроники» является официальным дистрибьютором и эксклюзивным представителем в России одного из крупнейших производителей разъемов военного и аэрокосмического назначения «JONHON», а так же официальным дистрибьютором и эксклюзивным представителем в России производителя высокотехнологичных и надежных решений для передачи СВЧ сигналов «FORSTAR».

JONHON

«JONHON» (основан в 1970 г.)

Разъемы специального, военного и аэрокосмического назначения:

(Применяются в военной, авиационной, аэрокосмической, морской, железнодорожной, горно- и нефтедобывающей отраслях промышленности)

«FORSTAR» (основан в 1998 г.)

ВЧ соединители, коаксиальные кабели, кабельные сборки и микроволновые компоненты:

(Применяются в телекоммуникациях гражданского и специального назначения, в средствах связи, РЛС, а так же военной, авиационной и аэрокосмической отраслях промышленности).
